

TV8494

Outdoor Housing with heating and power supply Profiline

The outdoor housing provides best protection even under the worst weather conditions. It does not only provide secure mounting, but also protects your camera against wind and rain. A 230 VAC heating unit with thermostat and a 12 VDC (1,5 A) power supply are integrated in the weather-proof housing. Thanks to the heating system, the window of the protective housing cannot fog up and condensation water is prevented. The result: Clear images even in capricious weather. The housing is dust-proof and protected against spraying water (IP 67). You can mount it outdoors without hesitation.

If you expect intensive solar radiation, we recommend the Outdoor Housing with fan (TV8495).

Product highlights:

- Protection class IP67
 - Built-in 12VDC (1,5 A) power supply
 - Inner cable duct
 - Recommended for outdoor use
 - Heating system included
