

Parker Product Datasheet

The replacement elements of the Parker BGT Filter Series feature high quality filter materials. Leif elements with reusable metal sleeve are patented and safeguard the use of genuine parts.

PART NUMBER: 938028Q
LENGTH: 578 mm
SEAL MATERIAL: Nitrile
DIAMETER: 126 mm
FILTER ELEMENT TYPE: 10Q Microglass
MICRON RATING: 10 µm
FILTER HOUSING SERIES: BGT11D (FK1297)

PRODUCT OVERVIEW

The high quality replacement elements of the BGT filter series are available in a wide variety of sizes and with several filter materials and micron ratings.

These replacement elements ensure the quality of filtration Parker is known for.

Fluid passes through the elements in an inside-to-outside direction, collecting particles inside the filter cartridge. This eliminates reinjection of contaminant during element change. Clean fluid then returns to the reservoir.

The BGT series filters are available with Magnetic pre-filtration. The magnet column removes ferrous particles, even during times of bypass, and extends the life of the filter element.

Using genuine Parker replacement elements guarantees Parker's quality of filtration. Using after market filters with unknown media quality may save initial cost, but can increase overall costs by

requiring more element change outs and potentially causing system downtime. Protect your investment by always buying genuine Parker replacement elements.
