

DDF.

The only solution for Dot and Dab walls.

The long expansion element, comparable to SXRL, distributes the load evenly into the solid and hollow masonry and guarantees outstanding load values.

The lateral long wings splay in the substrate and ensure a secure hold.

The red fiberglass-reinforced plastic shaft powerfully bridges the gap behind the plasterboard. The plasterboard is not dented.

The ribs on the shaft prevent the plug from turning for a convenient installation.

The safety screw included in the scope of delivery is optimally matched to the plug and ensures easy installation.

Hexagon head screw with integrated washer > no additional hardware required

Additional TX30 drive for easy installation
