

Ferrite sleeve for EMI suppression.

The Ferrite sleeve is intended to be used to suppress high frequency noise in a cable.

The cable to be screened is passed through the bore of the sleeve, which absorbs energy emitted from the cable.

Data transmitted through the cable will not be adversely affected by the sleeve.

Typical impedance is 35 Ohms at 25MHz and 75 Ohms at 100MHz.

Dimensions:

Diameter: 12.70mm +/- 0.40mm

Length: 12.70mm +/- 0.40mm

Bore: 7.92mm +/- 0.25mm

Material: Nickel Zinc Ferrite

Application: EMI suppression.

Maximum cable diameter: 7.6mm.

Part No Individual: 136-9031

Tray: 136-8979
