

## Getting started with the STEVAL-ISB038V1R wearable wireless power receiver based on STWLC04

### Introduction

This user manual explains the STEVAL-ISB038V1R hardware and software installation, as well as details on the board evaluation and the GUI interface.

The STEVAL-ISB038V1R wireless power receiver evaluation board is a reference design based on the STWLC04 device.

This receiver operates with the STWBC-WA wearable reference design (STEVAL-ISB038V1T) as a 5 V power supply or a simple CC/CV battery charger. Mode and parameter changes can be performed through the I<sup>2</sup>C bus which is easily accessible via the graphical interface.

# 1 Getting started

## 1.1 System requirements

To use the STEVAL-ISB038V1R RX board with the GUI, you need a PC with Microsoft Windows® XP and higher.

The board is connected to the PC through the USB to I<sup>2</sup>C converter included in the STEVAL-ISB038V1R package.

## 1.2 Package contents

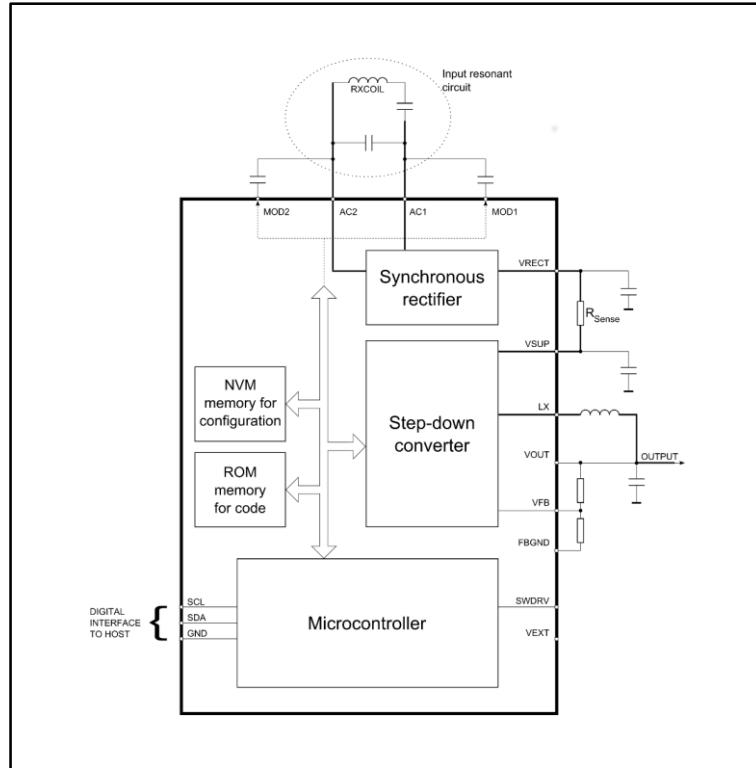

To evaluate the STEVAL-ISB038V1R board, you need:

- Hardware:
  - STEVAL-ISB038V1R board
  - the USB-I<sup>2</sup>C converter board
- Software:
  - PC GUI application (no drivers, no installation)
  - documentation: user manual

## 2 Hardware description and setup

### 2.1 System block diagram

Figure 2: STEVAL-ISB038V1R block diagram

### 2.2 STEVAL-ISB038V1R RX wireless power receiver board

The STEVAL-ISB038V1R RX board has the following features:

- NVM memory to store default configuration
- a 5 V output or CC/CV charger (configurable)
- overvoltage, overcurrent and overtemperature protection
- a LED for power transfer progress status
- an I<sup>2</sup>C connection for the user interface and for default configuration update

Table 1: STEVAL-ISB038V1R electrical performance

Parameter	Description	Min	Typ	Max	Unit
5 V mode					
Vout	Output voltage		5		V
Iout_lim_max	Output current limit max.		0.2		A
Charger mode					
Vout	Charge voltage		3.6/4.1/4.2		V
Ichg	CC charging current		0.1/0.15/0.2		A
Ipre	Precharge current		0.05		A

Parameter	Description	Min	Typ	Max	Unit
Vpre	Precharge to CC charge threshold		2.5		V

Figure 3: STEVAL-ISB038V1R charger mode configuration

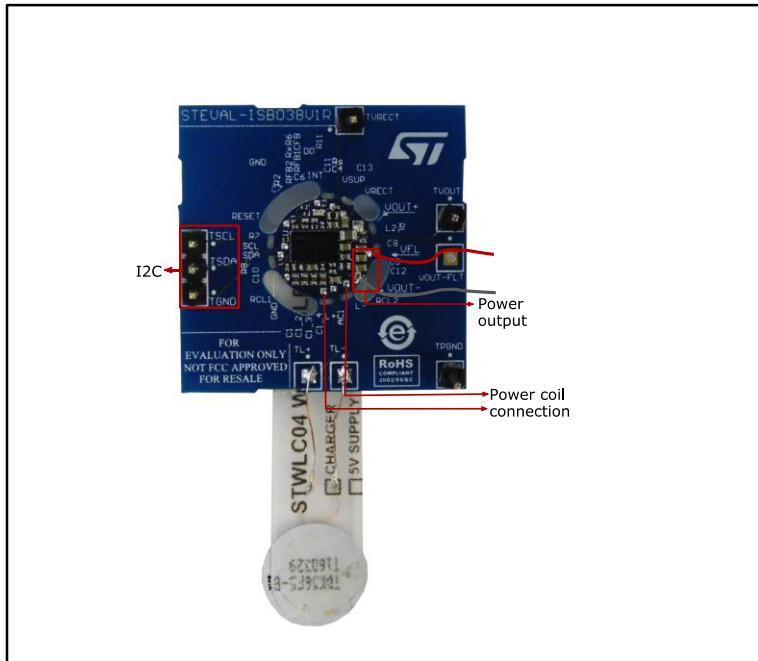

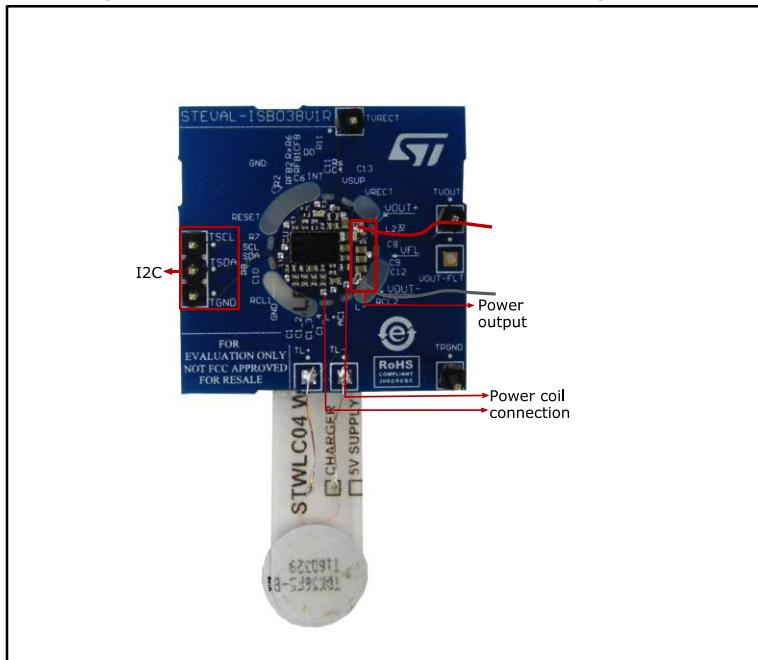

Figure 4: STEVAL-ISB038V1R 5 V mode configuration

## 2.3 Prerequisites

The following tools are necessary:

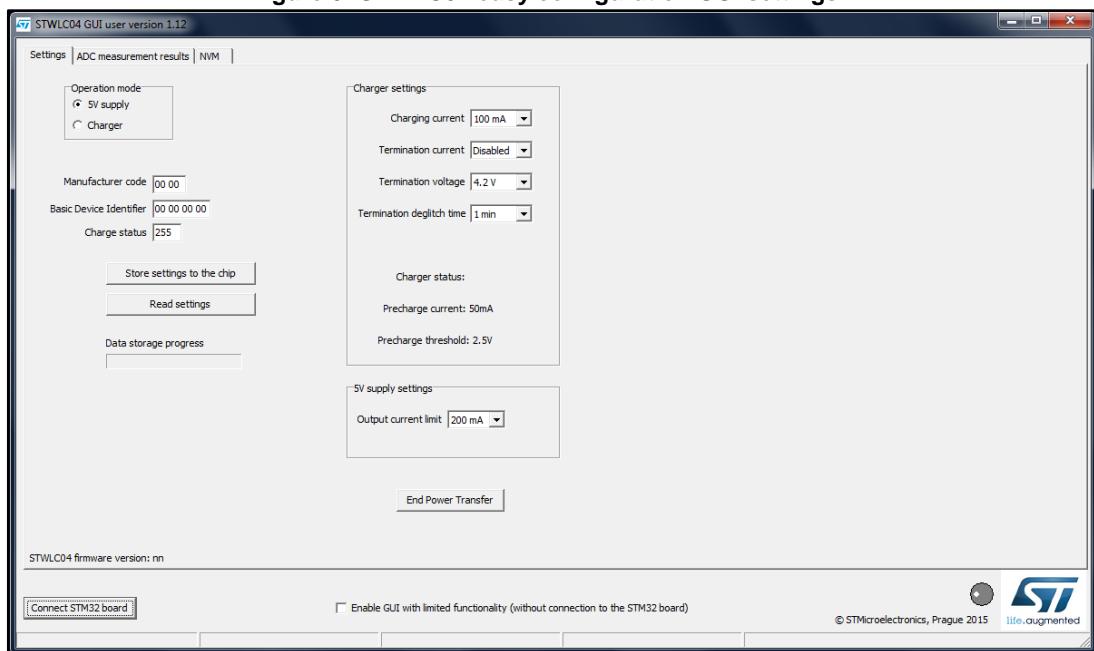

- a STEVAL-ISB038V1R board including the USB to I<sup>2</sup>C converter
- a USB to I<sup>2</sup>C converter
- a Windows PC and the STWLC04 GUI (no installation needed, no dedicated drivers)

## 2.4 Procedure

This GUI provides an easy way of configuring the most common parameters; the STWLC04 device configuration is, however, not limited to these.

The following picture shows the GUI main screen. To access the parameters, power the STWLC04 either by placing it on a Tx or by providing an external 5-7 V through TVRECT.

**Figure 5: STWLC04 easy configuration GUI settings**

The wireless power receiver can operate in the following modes:

1. 5 V power supply
2. CC/CV battery charger

Never set 5 V supply mode with battery connected to the device output.

In 5 V power supply mode, the following parameters can be configured:

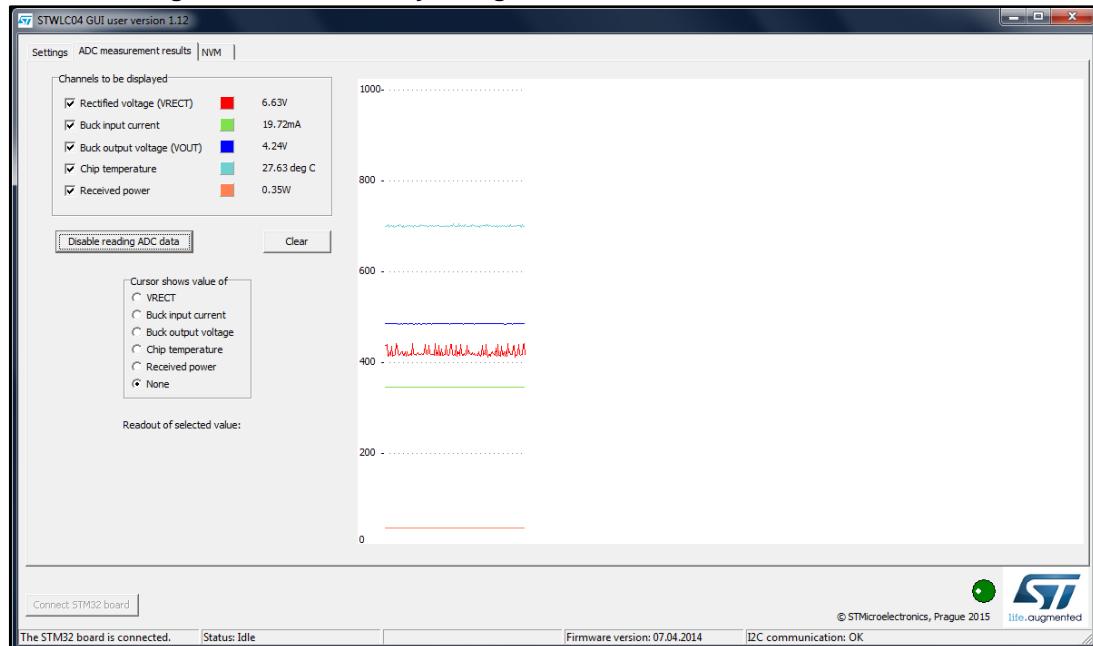

- charging current
- termination voltage
- termination current
- termination deglitch time

In charger mode, only the output current limit can be configured.

In each operation mode, the manufacturer code and device identifier can be set. The device also provides charge status information.

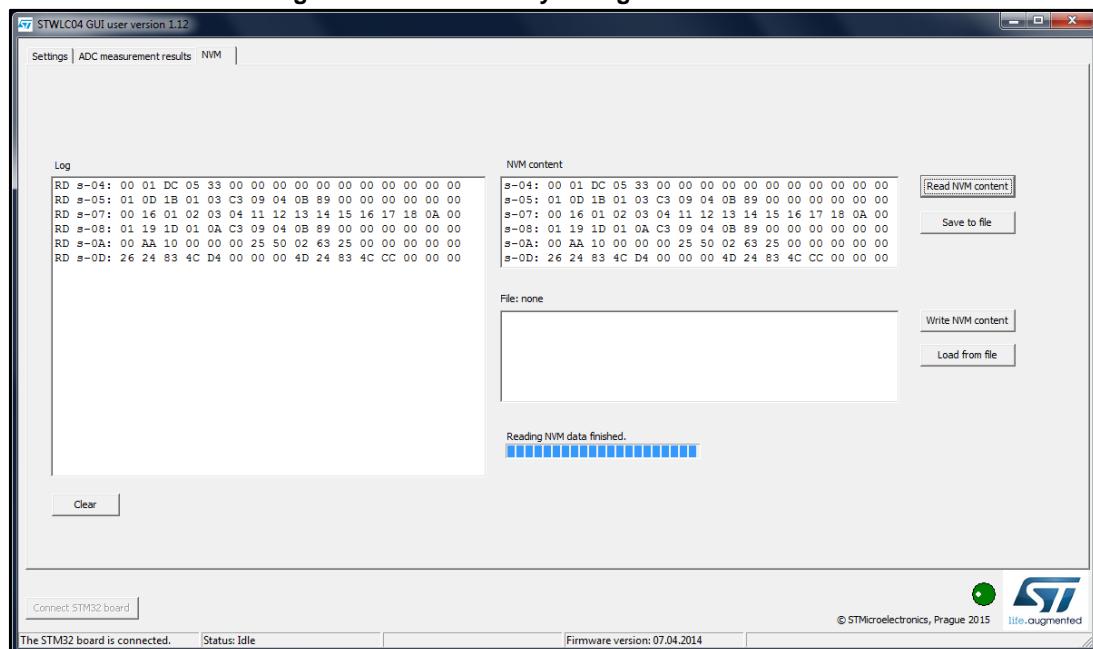

The “ADC measurement results” tab in the figure below shows internally measured values.

**Figure 6: STWLC04 easy configuration GUI ADC measurement results**

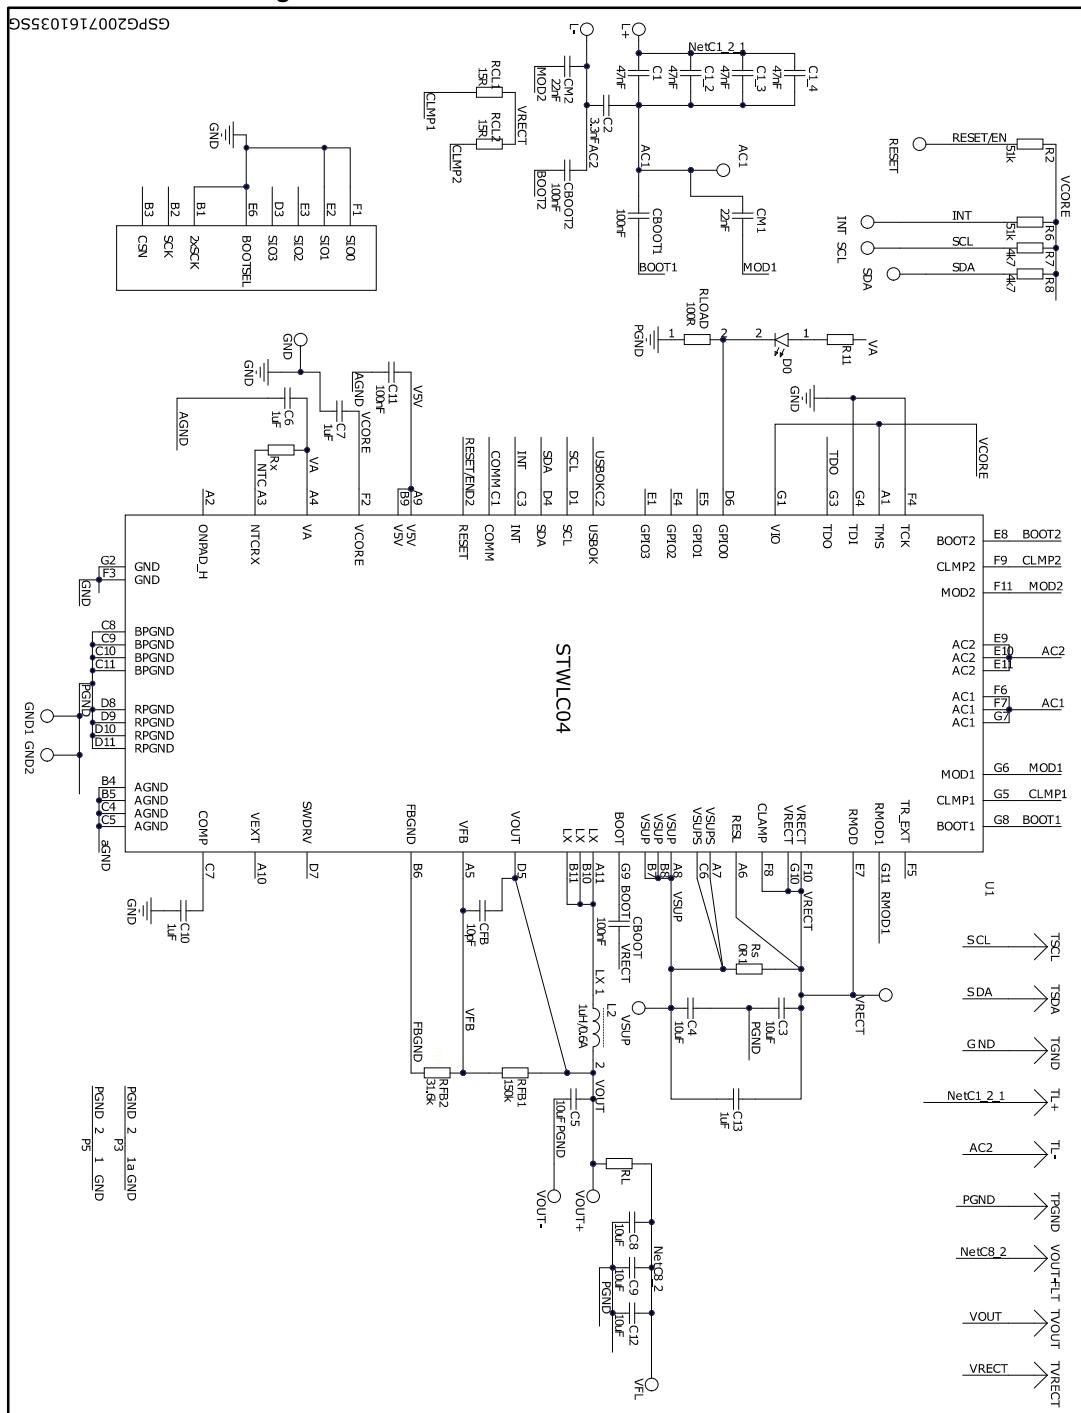

The “NVM” tab lets you download or update settings stored in the internal non-volatile memory.

**Figure 7: STWLC04 easy configuration GUI NVM**
