LUXEON V2 LEDs are tested and binned with a DC drive current of 700mA, at a junction temperature, T_j , of 85°C.

Part Number Nomenclature

Part numbers for LUXEON V2 follow the convention below:

L 1 V 2 – **A A B B** 0 0 0 0 0 0 0 0 0 0

Where:

- A A** – designates nominal ANSI CCT (27=2700K, 30=3000K, 40=4000K, 50=5000K, 57=5700K, 65=6500K)
- B B** – designates minimum CRI (70=70CRI)

Therefore, the following part number is used for a LUXEON V2 4000K 70CRI LED:

L 1 V 2 – **4 0 7 0** 0 0 0 0 0 0 0 0 0 0

Notes for Table 4:

1. Proper current derating must be observed to maintain the junction temperature below the maximum allowable junction temperature.
2. Residual periodic variations due to power conversion from alternating current (AC) to direct current (DC), also called "ripple," with frequencies ≥100Hz and amplitude ≤15% of the maximum allowable DC forward current are acceptable, assuming the average current throughout each cycle does not exceed the maximum allowable DC forward current at the corresponding maximum junction temperature.
3. Pulsed operation with a peak drive current equal to the stated peak pulsed forward current is acceptable if the pulse on-time is ≤5ms per cycle and the duty cycle is ≤50%.
4. Transient reverse voltages and surge currents due to electrical switching or supply interruptions are acceptable if these events do not last for more than 10ms, the amplitude of the reverse voltage does not exceed 5V and the reverse current is less than 220uA.

Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

LUXEON V2 LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

A B C D

Where:

- A** – designates luminous flux bin (example: V=290 to 300 lumens, W=300 to 310 lumens)
- B** – designates color bin (example: 1=6500K, 2=5700K, 3=5000K, 5=4000K, 7=3000K)
- C** – designates color space (example: 5=5-step MacAdam ellipse)
- D** – designates forward voltage bin (example: X=2.65 to 2.85V, Y=2.85 to 3.00V)

Therefore, a LUXEON V2 4000K 70CRI with a lumen range of 290 to 300 lumens, color bin of 55 and a forward voltage range of 2.65 to 2.85V has the following CAT code:

V 5 5 X
