Measurement principle

The Mobrey MSP Series is a liquid level transmitter based on ultrasonic technology that is suitable for many liquid applications.

Ultrasonic pulse signals are transmitted and reflected from the liquid surface. The transmitter 'listens' for reflected signals (echoes) and measures the time-delay between transmitting and receiving. The distance to the liquid surface is automatically calculated using the computed time-delay.

An integral temperature sensor continuously measures the air temperature around the transmitter. It then computes the speed of sound in air, automatically compensating the Distance for temperature effects. The MSP400RH and MSP900GH have a Remote Temperature Sensor option.

The distance measurement can be sent through the 4–20 mA or HART® output.

Special features

Advanced software features

- Learn routine (false echo registration)

  The transmitter can learn to ignore up to four false echoes caused by the pulse signal reflecting off obstructions, until the actual level is seen.

- Empty tank mapping

  When a tank is empty, the transmitter can learn to ignore up to four false echoes, without the need for user interaction.

- Present depth

  The bottom reference can be automatically set using a known user-entered depth.

- Set as empty

  When the tank is empty, the bottom reference can be automatically reset to the measured distance.

- Distance offset

  The distance to the surface can be adjusted by a user-entered positive or negative offset value.
- Level offset

  The level can be adjusted by a user-entered positive or negative offset value

- Bottom blanking

  The transmitter can be set to ignore an area of the tank bottom to avoid false echoes from obstructions.

Special conditions for safe use

1. All transmitter models have external plastic parts, which could present a risk of ignition due to electrostatic charge build-up. They shall not be directly installed in any process where its enclosure might be charged by the rapid flow of non-conductive media.

2. All transmitter models shall only be cleaned with a damp cloth.

3. When the transmitter housing uses aluminum alloy in its construction, this presents a risk of ignition due to impact and shall be taken into consideration on installation and use.
