

## About Series 7 Organiser Software

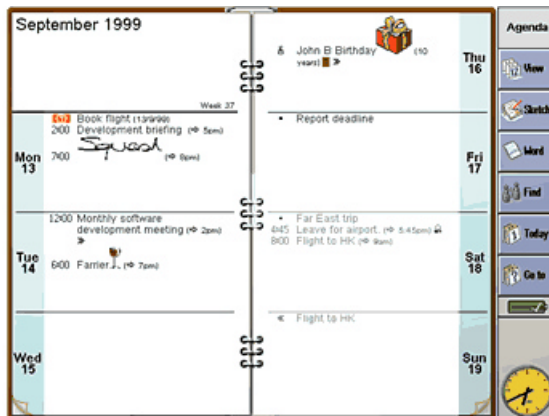

### Agenda

Agenda	Contacts	Word	Sheet	Email
Web	Fax	SMS	Data	Jotter

At work, you can stay in control of your time with **Agenda**. At home, you'll be reminded of anniversaries, theatre or cinema dates and jobs to do around the house.

Wherever you are, knowing that **Agenda** on Series 7 is at your side will give you tremendous peace of mind. **Agenda** won't replace your own memory, but it's the perfect assistant, setting up alarms and reminders to prompt you into action in plenty of time.

Within **Agenda**, you can view your diary by day, week, month or year, entering new appointments just by moving to the right day and starting to type. You can set entries to repeat in almost any pattern you can think of or to span more than one day.

In case text itself is not enough, pictures, sound clips and notes can be added to an entry. For example, for a meeting you might insert a sketch map of how to get to the meeting place and a file of notes, tables and graphs.

It's easy for you to keep to-do lists of things you simply must remember. And because each to-do entry can itself have attached documents, *Agenda* can help you manage quite complex projects and events.

For work or corporate systems you can seamlessly synchronize your **Agenda** with your PC Lotus Organizer™, or Microsoft Outlook™/Schedule+ using [PsiWin\\*](#).

\*Additional synchronizer plug-ins are detailed in the **compatibility** section.

### Contacts

Agenda Web	Contacts Fax	Word SMS	Sheet Data	Email Jotter
---------------	-----------------	-------------	---------------	-----------------

More than a simple address book, **Contacts** makes sure the details of your contacts are available in other applications (e.g. **Email**) and also synchronize with your favourite desktop software.

For each contact, you can enter:

- personal information (name, mobile, telephone, address etc.)
- work information (company, work telephone, work address etc.)
- other notes (such as Birthdays)

It is the latter which is one of the keys to using **Contacts**. For each contact, you can make as many separate notes as you like, keeping a record of any conversations and meetings. Old notes can be easily erased, ensuring your information on each contact is as up-to-date as possible.

**Contacts** also lets you browse and sort entries with a tap of the pen. If you know part of a contact's name, just use the touch type keyboard to enter a search clue. Once found, you can dial home, work or mobile numbers using DTMF tones through the palmtop's loudspeaker.

With the Series 7, it's easy to exchange information with others. If you have a colleague or partner with another Series 7 or Series 5/5mx, you can 'beam' a contact's details to them using the Infrared facility. If you use a PC-based contact manager, you'll find that synchronizing the two only takes a few seconds, thanks to the Series 7's built-in support for the 'Vcard' standard.

# Word

Agenda Web	Contacts Fax	Word SMS	Sheet Data	Email Jotter
---------------	-----------------	-------------	---------------	-----------------

One of the biggest advantages of using the **Series 7** is its patented touch type keyboard. You can use **Word** to work on reports, letters and memos, with no practical size limit.

Just like a popular PC word processor, it shares many similar features that you will already be familiar with, including styles, formatting and templates.

You can even use the **Series 7's** 'object' technology to insert tables and pictures inside your **Word** documents. A special 'Outline' feature aids your writing, giving you a powerful glimpse of your document's structure.

With the ability to include a selection of templates or create your own pre-defined templates **Word** is great for short memos or even long documents. With the Infrared facility or via the cable you can print directly to a printer or even send your document via fax.

### Sheet

<a href="#">Agenda</a> <a href="#">Web</a>	<a href="#">Contacts</a> <a href="#">Fax</a>	<a href="#">Word</a> <a href="#">SMS</a>	<a href="#">Sheet</a> <a href="#">Data</a>	<a href="#">Email</a> <a href="#">Jotter</a>
---	---	---	---	---

If you've not yet discovered the power of spreadsheets, the **Series 7** makes the perfect platform to learn on.

From taking your first spreadsheet steps, experimenting in odd moments while waiting for a plane or train, to masterfully minding the finances of a small company, **Sheet** is an application that's up to the job.

You can use the toolbar to apply formatting to columns, rows and individual cells, altering their border, background and font. You can also change the column widths and row heights easily, by dragging the grid labels to the desired positions with the stylus.

Many different styles of graph can be drawn at any point by simply highlighting a range of cells and tapping on the 'Graph' toolbar button.

**Sheet** also has a full range of financial, logical and statistical functions and you can sort cells horizontally or vertically, enabling you to create extremely sophisticated documents.

### Email

- FAX Software
- SMS within Email

Agenda Web	Contacts Fax	Word SMS	Sheet Data	Email Jotter
---------------	-----------------	-------------	---------------	-----------------

Sending and receiving emails couldn't be simpler. As long as you have email on your PC you can carry your Email on your Series 7.

There are 2 simple ways of collecting your **Email**

1. Directly from your PC using your PC cable and PsiWin.
2. Collect your email while out on the move by connecting to the Internet.

#### Choose how you want to collect your Email

Synchronization with your PC allows you to take your email with you when you're away from your desk. No modem is required, just connect to your PC with the **Series 7** PC cable and PsiWin software and follow the step-by-step synchronization task.

Connect directly to the Internet with your modem, mobile or land line and collect your email. **It's your choice.**

#### Choose which emails to download

**Email** displays the contents of each of your mailboxes in turn, so all you have to do is choose which messages to download onto your **Series 7**.

### **Familiar PC like interface**

With **Email** you have an Inbox, Outbox, Drafts and Sent folder system in common with other email packages.

Once new messages have been downloaded to your '**Inbox**', you can read them at your leisure, reorganizing messages into new folders if necessary thus keeping work and private emails separate.

### **Multiple email accounts**

You can send and receive messages with the **Series 7** built-in **Email** application.

It allows you to set up different email accounts. For example, you may want to keep your work and personal email under separate accounts, allowing you to use your **Series 7** as a mobile email terminal. Setting up email accounts are simple, and messages can be sent and received from several email accounts simultaneously.

### **Integrate your contacts with the *Email* address book**

When creating new emails, it's easy for you to choose new recipients from the addresses stored in **Contacts** without having to recreate the address. Just go into the address book where all your contact details are shared with the email address book.

#### **Email compatibility features**

Compatible with Internet email standards, including POP3 (used by Internet Service Providers - ISPs) and IMAP4\* (often used in your company network).

Synchronize with leading email products (VIM/MAPI compliant) including: **Microsoft Outlook 97/98**, and Lotus cc:Mail V6 & 8.

Supports MIME for incoming and outgoing emails and incoming UUEncoded messages.

Attachment viewer for Microsoft Word 97 documents.

Support Call Back security - allowing corporate users to dial in to their RAS server which will then initiate a return call to a defined telephone number for that user.

***\* IMAP4 protocol support will be available later in 1999 as a free download plug-in for email.***

# About Series 7 Connectivity Software

Web

Agenda Web	Contacts Fax	Word SMS	Sheet Data	Email Jotter
---------------	-----------------	-------------	---------------	-----------------

The **Series 7** comes with an Internet compatible web browser which, when connected to a mobile phone or modem, gives users remote access to browse the Internet, including corporate Internet/Extranet sites. The browser is preloaded.

With support for most types of graphics, tables and frames, all your favourite websites can be browsed on the **Series 7**.

As you'd expect, it's easy to bookmark new websites, making sure that you don't waste too much time online and to get you started, Psion have pre-installed a number of recommended bookmarks to websites optimized for your **Series 7**.

Also included is the 'EPOC™ runtime environment for JAVA™', a plug-in for **Web** that will let your **Series 7** run Java applications. These are common on many business and leisure websites and mean that you'll be able to interact with sites just as capably as when in your office.

View Psion Enterprise's Java website for more information on JAVA™.

The **Email** application serves as a messaging manager so that you can create, send and receive **SMS messages** and faxes.

The universal inbox/outbox/draft and sent folders provide a single place for managing all types of messages.

Faxes can be sent (and received), including **Word** documents, spreadsheets, pictures and graphs. Choose from a number of fax header sheets or create your own fax cover sheet

If you're using a **compatible** mobile phone, you can also compose and send (and receive) SMS messages to pagers or other mobile phone users. The touch-type keyboard and full width screen makes sending faxes or SMS messages quick and easy

## About Series 7 Connectivity Software

Agenda Web	Contacts Fax	Word SMS	Sheet Data	Email Jotter
---------------	-----------------	-------------	---------------	-----------------

### An Introduction To SMS

The **Short Message Service (SMS)** is the ability to send and receive short messages to a mobile phone, pager or your **Series 7**.

SMS was conceived as part of the Global System for Mobile communications (GSM) digital standard. Originally for the GSM900 and GSM1800 networks it has also become available for the GSM800 and GSM1900 networks too. *Please check with your network provider to ensure that your mobile can send and receive SMS messages.*

You can therefore in principle use these facilities on any GSM or "Personal Communications Networks" (PCN, which is also GSM). For instance, in the UK these networks are run by Cellnet, One2One, Orange and Vodafone and most modern phones support the SMS facility.

SMS can be used for any purpose where voice is not the easiest or best communications medium.

For example, it's very difficult to remember phone numbers and re-key them. However, the **Series 7** makes easy work of sending a SMS message - using your touch-type keyboard you can rapidly put together a brief message rather than using the truncated keys on your cellphone. Then, just like an email, send the message to your recipient.

## About Series 7

### Office Software

### Data

Agenda Web	Contacts Fax	Word SMS	Sheet Data	Email Jotter
---------------	-----------------	-------------	---------------	-----------------

Perhaps the most flexible application in the Series 7, you can use **Data** to store thousands of records, each with the labels and content you require.

For example, you could use **Data** to catalog a book, video or CD collection, with entries containing pictures or sound clips. Almost any information which can be broken down into small sections is a good candidate for storing in **Data**, typing it in manually or importing from a 'comma' or 'tab delimited' text file.

You can have as many **Data\*** files on the **Series 7** as you like, each with different labels and appearance and being searched by typing in just a few characters of a keyword or title.

*\* Data files can be synchronized with your Lotus Notes databases.*

## About Series 7 Organiser Software

Jotter 

Agenda Web	Contacts Fax	Word SMS	Sheet Data	Email Jotter
---------------	-----------------	-------------	---------------	-----------------

### Jotter is all about speed.

When you need to take a phone number or piece of information down in a hurry, the last thing you want to worry about is which application would be most suitable for the job.

**Jotter** solves the problem by allowing you to enter information as you think of it, without thought to form or structure. It's also always just a screen tap away, on the **Series 7** icon bar.

You can use **Jotter** in the same way as a paper jotter pad, but with all the advantages of a modern palmtop computer. Each of your notes is automatically dated, and can contain typed or handwritten text, pictures or even sound clips.

**Jotter** will also help sort the notes, or to help you find a specific piece of information by searching for a particular keyword.

When you have slightly more time, it's easy for you to review your notes, copying entries over to any of the other **Series 7** applications or embellishing them further in **Jotter** itself.

- *Use the pen to insert handwritten notes or drawings from the Sketch application.*
- *Embed files, pictures and even sounds.*
- *View each note as a card or list each note.*
- *Entries are automatically dated and sorted.*
- *Search using key words.*

## About Series 7

Hardware

## Technical Specification

<b>Housing</b>	Robust plastic case with outer blue leather covering.
<b>Processor</b>	StrongARM SA1100 133MhZ
<b>Memory</b>	RAM: 16MB, Upgrade via a proprietary plug in 16MB DIMM card ROM: OS Mask ROM module FLASH: Single Type I/II CF card and/or Single Type I/II PC Card
<b>Expansion</b>	2 Internal bus slots for RAM/ROM. Both are accessible by user.
<b>Display</b>	Full VGA 640*480 pixels: 7.7" STN colour back lit LCD touch screen display
<b>Pointer</b>	Touch screen digitiser and pen. Instant access to built in and user defined applications.
<b>Keyboard</b>	High quality notebook style keyboard. Pitch 17mm. Travel 3mm. Pantograph mechanism.
<b>Sound</b>	Quality loudspeaker and microphone for audio support. Digital sound recording (no S5 style voice recorder buttons)
	Li-Ion battery pack, giving 8.5 hours typical operation. 2.5 hour recharge. User-changeable Lithium backup battery.

<b>Power sources</b>	<p>External PSU via DC jack or optional docking station</p> <p>DC jack socket for use away from the docking station (covered by docking station when docking station in use).</p> <p>Battery charging accommodated via either DC jack or docking station.</p> <p>Docking station will connect power in and RS 232</p>
<b>Battery life</b>	<p>Estimate 8.5 hrs typical usage without PC Card from standard Li-on pack</p>
<b>External interfaces.</b>	<p>Honda connector for RS232 and mobile phone connection, 115Kbits/s. Series 5 compatible.</p> <p>DC jack for external power supply.</p> <p>PC Card slot (type I/II)</p> <p>CF type II card slot</p> <p>IrDA interface (115Kbits/sec)</p> <p>Docking station interface 15 pins</p>
<b>Connectivity</b>	<p>PC connectivity via serial port, available with PsiWin</p> <p>Mobile phone connectivity via IrDA or PC Card</p> <p>PSTN connectivity via PC Card</p>
<b>Optional Peripherals</b>	<p>Docking station</p> <p>PsiWin cable (bundled with System)</p> <p>Power Supply</p> <p>Battery pack</p> <p>16MB DRAM expansion card</p> <p>Carrying case</p>
<b>Infrared</b>	<p>One IrDA compatible transceiver. Support for IR-Comm, Print.</p>
<b>Operating System</b>	<p>Symbian EPOC32 ER5</p>
<b>User interface</b>	<p>EPOC32 ER5 with VGA modifications</p> <p>Application switching via soft (digitiser) keys.</p>
	<p>"On / Off" button</p>

The product will comply with the following standards:

Size 235 x 182 x 37 mm

Weight System: 1150g including battery pack

Operating humidity 75% max. non-condensing

Operating temperature range: 0 to +50 centigrade

Storage temperature -10 to +60 centigrade

Electromagnetic susceptibility EN 50082-1:1997/EN 55024:1998

Electromagnetic compatibility EN 55022 Class B FCC Part 15 Class B

Safety EN60950

IP rating IP30

## About Series 7

### Additional Software

If you need to connect your Psion Series 7 to more than one PC, for example your office and home PC's, and additional connection cables can be purchase for use with your [PsiWin 2.3](#) software

### Docking Station

The docking station is designed for easy and fast docking of the Series 7 with a PC for file synchronisation, file sharing and backup. The docking station also provides power to the unit and automatically charges the battery when docked.

### PsiWin Communication Cable

If you need to connect your Psion Series 7 to more than one PC, for example your office and home PC's, an additional connection cables can be purchase for use with your [PsiWin 2.3](#) software

### DIMM Memory cards

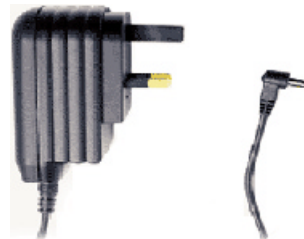

Upgrade RAM can be installed on a Psion proprietary DIMM card. Psion offer a 16MB expansion card providing a maximum memory configuration of 32MB. The upgrade can be fitted by Psion's authorised reseller, Level 1, who can be contacted on:

Tel: 08702423344  
or [www.levelgroup.com](http://www.levelgroup.com).

### Power Supply

The Series 7 is supplied with a Power Supply so battery life can be preserved when possible. The Series 7 power supply is not the same as the adapter used for the Series 3 or 5 range.

Specifications: In: 100 - 240/VAC/50 - 60hz/550mA, Out:15.5VDC/1.5A

### Lithium Ion Rechargeable Battery (10.8, 1500mAh)

This battery is sold with the product but is also available separately. It will give 8.5 hours typical usage and is rechargeable.

### **Psion Dacom Gold Card Modem, 56K**

Email, fax and browse the Internet on your Series 7 with the Gold Card Global PC Card modem from Psion Dacom. This fast 56k modem provides communication via the standard UK telephone letting you stay in touch when you are away from the office.

For truly mobile communications Psion Dacom have a selection of GSM upgrade kits for connecting to a wide selection of leading phones, including Nokia, Ericsson, Motorola and Panasonic. The upgrade kit includes everything you need to connect the PC Card modem to your mobile phone for email, fax and Internet access on the move.

### **Parallel Printer Link**

The Parallel Printer Link connects the Series 7 to printers with parallel ports. Using the wide range of built-in printer drivers, printing is possible to virtually any printer. The unit is self-powered by one PP3 battery (not included).

### **Psion Memory Disks**

Psion Memory Disks for the Series 7 come in 4MB, 10MB and 20MB sizes. They use the industry standard CompactFlash technology which features advanced memory devices. There is no need to format the disk, and space from deleted files is automatically reclaimed. The small, robust disks are also ideal for making backups that can then be carried wherever the user goes.

### **Pen Pack**

3 additional standard pens for use with Series 7.

### **Case**

A stylish blue leather case designed to carry the Series 7, a power supply and additional paperwork. It comes with an optional shoulder strap and padding protection for your computer.
