# **UWP 4.0 SE**

#### Universal web platform

#### Description

UWP 4.0 is a monitoring gateway and controller that allows the monitoring and controlling of installations where Energy Efficiency Management and Building Automation functions are needed. The system monitors and controls connected devices via its local bus management functions; it includes a web server with a powerful and intuitive user interface to display customised dashboards and interact with local devices and remote systems; the UWP 4.0 embedded automation server allows data to be exchanged locally or remotely via standard Internet protocols. UWP 4.0 can manage the complete lighting control system based on DALI-2 actuators and it can operate as a BACnet/IP gateway.

#### **Benefits**

- **Flexibility**. UWP 4.0 is the core of a powerful system which includes a complete range of meters, sensors and actuators
- Integration. UWP 4.0 includes all the necessary software tools to set up and operate the required solution. No subscriptions or additional services are required.
- Interoperability. By leveraging its automation- server functions, it is easy to exchange data with other systems via FTP, SFTP, FTPS, SMTP, Rest- API, MQTT, Modbus and BACnet.
- **Scalability**. It is easy to scale up the system, by leveraging its comprehensive set of monitoring, controlling and communication functions
- Fast installation and set up. Each function can be programmed with ease by means of the free configuration tool
- **Reliability**. The system is secure against cyber-attacks and computer viruses. It is the ideal Edge unit for providing local control and data redundancy to distributed applications, and for logging history and events.
- Generic MQTT compatibility: UWP 4.0 can send real time data and data stored in its database to a generic MQTT broker. Moreover, it can receive commands from a generic MQTT broker.
- Mainstream IoT Hub supported: UWP 4.0 has been validated to work with Azure IoT, and is compatible with Amazon AWS IoT.
- Awareness. By means of scheduled reports and email/SMS alerts, users are constantly advised about installation status
- Compact Size. All of the above is available in a 2 DIN module
- Powered by MAIA Cloud: secure and reliable system for remotely managing, setting and operating UWP 4.0 units Worldwide.
- **IoT Security Rating**: Security Capabilities Verified by UL to Level SILVER for UWP 4.0 SE (Security Enhancement).
- Optimised user interface. Improved user experience for fast commissioning and easy daily operation.

#### **Applications**

UWP 4.0 is suitable for applications in Building Automation, Energy Efficiency Performance Management and all their combinations are suitable application for UWP 4.0. Its comprehensive set of functions, small dimensions and reliability are the key factors for depending on UWP 4.0 as the local monitoring/controlling unit in a wider distributed scenario.

#### **Main functions**

- Acting as a gateway for sharing data and receiving remote commands via BACnet, Modbus TCP/IP and Rest-API
- · Monitoring energy control systems so as to check energy efficiency status and improvements.
- Recording, displaying and transmitting information (events and history)
- · Defining logical functions, reacting to abnormal conditions and control actuators
- · Setting up and operating Building Automation functions
- · Setting up and operating Lighting Control functions and DALI-2

#### Main features

- Up to 5000 managed objects (including e.g. I/Os signals belonging to physical connected modules, status signals belonging to functions) shared among Energy Management and Building Automation applications.
- Up to 128 Modbus devices connected to RS485 ports (64 devices each port).
- Up to 5 users concurrently connected to the Web-App.
- Up to 5 concurrent M2M connections (API connections, BACnet clients, Modbus masters).
- BTL certified (max 1000 BACnet points for used BACnet objects).

### Structure

Area	Description	
Α	Ethernet port	
В	USB port (Host function)	
	Indicator LEDs:	
	Green (ON)	
	ON - Power ON	
	OFF - Power OFF	
	Yellow (BUS)	
С	ON - Communication OK for all the MCGs connected to the HS-busCommunication OK with CSMS system	
	OFF - No communication is present on the HS-bus with CSMS system	
	Flashing - Communication errors for some of the MCGs connected to the HS-bus	
	Yellow (Port 1)	
	OFF - Communication disabled	
	Flashing 200 ms ON, 600 ms OFF - No communications on RS485 COM1	
	Flashing 200 ms ON, 200 ms OFF - Communications OK	

Area	Description	
	Indicator LEDs:	
	Yellow (Port 2)	
	OFF - Communication disabled	
	Flashing 200 ms ON, 600 ms OFF - No communications on RS485 COM2	
	Flashing 200 ms ON, 200 ms OFF - Communications OK	
	Blue (USB)	
С	ON - USB/SD device is present	
	OFF - No USB/SD device is present	
	Flashing - Backup in progress	
	Red (Prg)	
	ON - UWP is running a valid project	
	OFF - UWP is disconnected from the UWP IDEUWP is not programmed yet	
	Flashing - Loading/activating configuration	
D	Micro SD memory card slot	
E	Micro-USB port (Device function)	
F	RS485 COM1 port terminals	
G	RS485 COM2 port terminals	
Н	Power supply connection block	

# **Features**

#### General

Material	Noryl, self-extinguishing V-0 (UL94)	
Dimensions	2-DIN module	
Weight	150 g	
Protection degree	Front: IP40; Screw terminals: IP20	
Dielectric strength	4000 V AC RMS for 1 minute	
Rejection (CMRR)	65 dB, from 45 to 65 Hz	
	8, screw-type	
Terminals	Section: 1.5 mm <sup>2</sup> maximum; Torque: from 0.4 to 0.8 Nm	

### **Environmental**

Operating temperature	-20° to +50 °C (-4 ° to 122 °F)
Storage temperature	-30° to +70 °C (-22 ° to +158 °F)
Humidity (non-condensing)	20 to 90% RH

### **Power Supply**

Power Supply	15-28 V DC
Consumption	≤ 5 W
Battery	1 Metal-ion non-replaceable battery; 0.04 g

Note: The device contains metal-ion batteries. For the sending, you must comply with the relevant packaging and labelling regulation.

### Inputs/outputs insulation

Type of input/output	DC power supply	RS485 COM1	RS485 COM2	Ethernet	USB port "H"	USB port "D"	Local bus ports
DC power supply	-	0.5 kV	0.5 kV	0.5 kV	0 kV	0 kV	0 kV
RS485 COM1	0.5 kV	-	0.5 kV	0.5 kV	0.5 kV	0.5 kV	0.5 kV
RS485 COM2	0.5 kV	0.5 kV	-	0.5 kV	0.5 kV	0.5 kV	0.5 kV
Ethernet	0.5 kV	0.5 kV	0.5 kV	-	0.5 kV	0.5 kV	0.5 kV
USB port "H"	0 kV	0.5 kV	0.5 kV	0.5 kV	-	0 kV	0 kV
USB port "D"	0 kV	0.5 kV	0.5 kV	0.5 kV	0 kV	-	0 kV
Local bus ports	0 kV	0.5 kV	0.5 kV	0.5 kV	0 kV	0 kV	-

- 0 kV: inputs / outputs are not insulated.
- 2 kVrms: EN61010-1, IEC60664-1 over-voltage category III, pollution degree 2, double insulation on systems with max. 300 Vrms to ground.
- 0.5 kVrms: the insulation is functional type Mounting.

# Compatibility and conformity

	Electromagnetic compatibility (EMC) - immunity: EN61000-6-2		
Standards	Electromagnetic compatibility (EMC) - emissions: EN61000-6-3		
	Safety: EN62368-1

Directives	LVD 2014/35/EU		
	RoHS 2011/65/EU		
	CE	C UL US LISTED	
Approvals	Qualified Device AWS IoT Core	Security Capabilities Verified SILVER	UK PSTI Compliance (Security Requirements for Relevant Connectable Products).

# **Ports**

# Ethernet

Standard	ISO9847		
I AN configuration	Static or DHCP		
LAN configuration	IP Address; Net Mask; Default Gateway, DNS (primary, secondary)		
Protocols	HTTP, HTTPS, FTP, FTPS, SFTP, Modbus TCP/IP, DP (Data Push), SMTP, NTP, Azure IoT Hub, Modbus Gateway TCP/RTU, BACnet IP, Rest-API		
	WEB server: Port: 443 (by default*); 5 connections		
Client connections	*Note: you can activate port 80.		
Olient Connections	IDE: 1 connection		
	Modbus TCP/IP: 5 connections		
Connection type	RJ45 connector (10 Base-T, 100 Base-TX); maximum distance: 100 m		

# RS485

Number of ports	2		
F	COM1: Master or slave (gateway function)		
Function	COM2: Master		
Number of slaves	COM1: up to 64		
	COM2: up to 64		
Connections	2-wire. Max. distance 600 m		
Protocol	Modbus RTU		
Data format Selectable: 1 start bit, 7/8 data bit, no/odd/even/ parity, 1/2 stop			
Baud rate	Selectable: from 110 to 256000 bits/s		

# ► USB

Type Hi-speed 2.0 Type-A	
Mode	Host
Communication speed	60 MB/s

Function	Backup for disaster recoveryIntegration with Modem to provide internet connectivity when LAN not present
Supported devices	USB mass storage: direct connection to UWP 4.0
	USB modem/router can be directly connected
Supported File System	ext4, NTFS, FAT32

### Micro USB

Туре	High-speed USB 2.0 Micro-B	
Mode	Device	
Speed	60 MB/s	
Function	RNDIS (Virtual Ethernet)	
	Network Access via IP: 192.168.254.254	

To download the virtual Ethernet network card driver, go to: https://gavazziautomation.com/images/PIM/BROCHURE/ENG/mini-USB\_driver.zip

### Micro SD slot

Туре	Industrial (from -25 to +85 °C / -13 to + 185 °F)
Consoity	SD and SDHC
Capacity	Up to 32 GB
Function Backup for disaster recovery	
Supported File System ext4, NTFS, FAT32	

### HS bus

Bus type	RS485 high speed bus	
Function Connection to master channel generator modules (SH2MCG24 SH2WBU230x and SH2DUG24)		
Number of slaves Maximum 7		
	By local bus on the right hand side	
Connection	Note: All the SH2MCG24, SH2WBU230x and SH2DUG24 modules have to be connected on the right hand side of the UWP 4.0.	
Termination Always required on the last module		
Max distance	600 m	

# TCP/IP ports

# Inbound communication

Port number	Description	Purpose
80	HTTP	Access to the internal web-server, API functions
443	HTTPS	Access to the internal web-server, API functions
52325	SSH	Remote service (reserved to support personnel)
10000	UWP 4.0	Configuration and maintenance (UWP IDE)
10002	UWP 4.0	Configuration and maintenance (UWP IDE)
52326	UWP 4.0	Firmware and configuration update (UWP IDE)

<sup>\*</sup>Note: port 443 is the default one but you can also activate port 80.

# **Outbound communication**

Port number	Description	Purpose
53	DNS	Domain name resolution
123	NTP	Network time services access
21	FTP	Data upload to FTP server
25	SMTP	Email message dispatching
80	HTTP	DP (data push communication)

<sup>\*</sup>Note: these ports are the default ones but users can change them.

# UCS bridge

Mode	Port	Description
Secure	443	For the HTTPS connection for bridge opening.
Insecure 503	Through any TCP Modbus client.	
	503	Note: this port is the default one. Users can change it from the Web-App relevant page.
-	41214	Default port (to be enabled) for Modbus bridge.
		Note: this port is the default one but users can change it.

# Modbus TCP/IP

Function	TCP/IP port	Purpose
Modbus TCP/IP Slave	502 (selectable)	Modbus TCP data communication
Modbus bridge TCP/RTU	50 3 (Selectable)	Bridge function for accessing (read and write) RTU meter connected to the UWP RTU ports

# EV chargers settings

Port	Description	Purpose
8887	WS	Charger connecting to UWP-DLB using WS (Web Socket)
8886	WSS	Charger connecting to UWP-DLB using WSS (Secure Web Socket)

# **MAIA Cloud ports**

## Inbound communication (Through the tunnel)

Port number	Description	Purpose
*80	HTTP	Access to the internal web-server, API functions
*443	HTTPS	Access to the internal web-server, API functions
52325	SSH	Remote service (reserved to support personnel)
10000	UWP 4.0	Configuration and maintenance (UWP IDE)
10002	UWP 4.0	Configuration and maintenance (UWP IDE)
52326	UWP 4.0	Firmware and configuration update (UWP IDE)

<sup>\*</sup>Note: port 443 is the default one but you can also activate port 80.

# Outbound communication (Through the tunnel)

Port number	Description	Purpose
53	DNS	Domain name resolution
123	NTP	Network time services access
*21	FTP	Data upload to FTP server
*25	SMTP	Email message dispatching
80	HTTP	DP (data push communication)

<sup>\*</sup>Note: these ports are the default ones but users can change them.

# UCS bridge

Mode	Port	Description
Secure	443	For the HTTPS connection for bridge opening.
Insecure	503	Through any TCP Modbus client.  Note: this port is the default one. Users can change it from the Web-App relevant page.
-	41214	Default port (to be enabled) for Modbus bridge.  Note: this port is the default one but users can change it.

# For tunnelling

Access	Ports
MAIA Cloud Web	443/tcp and 1194/udp
MAIA Cloud App software	443/tcp and 1194/udp

Note: through the tunnelling service, all the above-mentioned ports are supported.

# **Data management**

	INPUT from: Modbus RTU, Modbus TCP/IP, Dupline
Multi-BUS communication	OUTPUT to: Modbus RTU, Modbus TCP/IP, BACnet, Dupline, DALI-2
Embadded Detabase	Embedded database for storing system configuration, variables, events
Embedded Database	Flexible data model based on signals definition and functions creation
Automation server	Automation server for exchanging data with other systems via: FTP, SFTP, FTPS, Rest-API, SMTP, MQTT

\*Note: Data stored on the internal UWP 4.0 database (including logged data points, events and configuration parameters) are preserved in the case of system shut-down. UWP 4.0 storage memory size is 4.0 GB (including all the logged data points, events and configuration parameters).

# Software and interfaces

#### MAIA Cloud

Remote access is the key to minimize the Total Cost Of Ownership of an UWP 4.0 powered installation; by leveraging the networking capabilities of MAIA Cloud, it is possible to take control of remote installations without leaving your office.

#### **Benefits**

- Reduced costs. Thanks to the VPN safe remote access, users do not need to travel and consequently waste money and time to solve their customers' issues.
- · Easy automatic remote networking
- · Hassle free regardless of destination and IP address.

#### **Main functions**

- Authentication: MAIA Cloud users can remotely access their UWP 4.0 fleets and manage them if needed.
- Security. Remote connections to MAIA Cloud and to the remote UWP 4.0 Edge units thanks to encrypted tunnelling.
- Hassle-free. Thanks to the MAIA Cloud tunnelling functions, you do not need to worry about IP address changes and firewalls. You could always access your device, according to your security policies.
- · Remote set-up and operation. Thanks to MAIA Cloud, it is possible now to remotely:
  - Set-up of any Modbus/RTU CG Meter (via UCS)
  - Set-up of any Modbus/TCP CG meter (via UCS)
  - Set-up of any Smart Dupline item (via UWP IDE)
  - Establishment of a VPN connection to your PC
  - Surfing on the UWP 4.0 web-interface.

### Architecture

# **UWP IDE**

UWP IDE is the UWP 4.0 configuration software. It allows the user to:

- · carry out the system commissioning
- · define the automation and control logics
- · set the measuring instruments and sensors monitoring.

# Main functions

- · Execute the Dupline modules automatic scan for fast commissioning
- · Configure interfaces and communication protocols
- · Configure and manage the connected modules
- · Define the control and automation functions
- Generate a driver to monitor third party Modbus devices
- Set the data and events collection and storage from Carlo Gavazzi or third party instruments
- Develop Modbus drivers for UWP 4.0 with both reading and writing functions for any Modbus device
- · Save a configuration offline for backup or any subsequent use

# **UWP 4.0 Web App**

The UWP 4.0 Web App is the UWP 4.0 Web Interface, accessible through Web browsers from mobile or desktop devices. Through widgets contained in predefined and customised dashboards, it allows the user to:

- · view and export collected data
- · control the automation functions
- · define specific settings (User Interface and Server Automation).

## Main functions

- · View collected data as real time values or charts
- Generate data and events reports
- Manage and adjust the functions parameters (e.g. modify temperature set points)
- Send commands (e.g. switching on/off or select scenarios)
- Configure Data Push Services to FTP/SFTP/FTPS servers or Em2-Server (Carlo Gavazzi)
- Configure MQTT link to IoT Hubs (Amazon AWS and Microsoft Azure)
- Configure Generic MQTT service to push data according to different policies and/or receive commands to change function status

# Cybersecurity

#### Introduction

Cybersecurity is the practice of protecting systems, networks, and programs from digital attacks. These cyberattacks are usually aimed at:

- · accessing, changing, or destroying sensitive information;
- · extorting money from users;
- interrupting normal business processes.

Implementing effective cybersecurity measures is particularly challenging today because there are more devices than people, and attackers are becoming more innovative.

For UWP 4.0 SE (Security Enhanced), the security capabilities have been verified by UL to Level SILVER (see theUL verified mark certificate).

The SILVER rating certifies the enhanced security capabilities of UWP 4.0 SE regarding:

- Access Control
- · Industry Privacy Best Practices
- · Product Security Maintenance.

Fig. 1 UL Verified Level

Fig. 2 IoT Security Rating Levels Guide

#### **Pillars**

- Disaster recovery. UWP 4.0 includes a solid disaster recovery system for saving and restore both configuration and history data on USB stick, SD card, SFTP server.
- Easy upgrade function. UWP IDE and web app notify users about the availability of a new software and firmware version; the whole upgrade process is managed by the UWP IDE.
- UWP secure bridge function. It permits you to establish a secure connection through LAN or Internet network between the UCS software and Carlo Gavazzi Modbus meters connected to UWP 4.0 via RS485 or LAN network. This way, you can perform the following tasks remotely:
- configure a wired device via UCS without disconnecting UWP 4.0;
- -check the proper functioning of the devices, the real time measures, the status of alarms and the inputs/outputs

- modify or correct the configuration parameters, in case of measures anomalies or of project structure changes.
- Secure access: thanks to MAIA Cloud, you can access a UWP 4.0 system through a secure VPN (virtual private network).
- Minimalist approach: UWP 4.0 has been designed to include only the necessary sub-systems into a highly optimized linux core, so to avoid unnecessary risks due to attacks to unmonitored services.

For further information, refer to the following guideline: "Security in energy monitoring and building automation applications based on the UWP 4.0 ecosystem".
