Tork Heavy-Duty Cleaning Cloth

Article	530180
System	W4 - Top pak system
Colour	White
Ply	1
Unfolded length	61.5 cm
Unfolded width	35.5 cm
Folded length	10.5 cm
Folded width	35.5 cm
Embossing	No
Print	No

Tackle the toughest spills with ease with our thick and absorbent cleaning cloth. This heavy-duty design can be used with most solvents and protects hands for safe, hassle-free cleaning. It comes in a Tork Easy Handling® box for speedy carrying, with one-at-a-time dispensing boosting hygiene and minimising waste. Lower your company's environmental impact too – we've lowered CO2 emissions for Tork exelCLEAN® cloths by 28% since 2011* and made the packaging from recycled materials. *(Life Cycle Analysis) LCA conducted by Essity and IVL Svenska Miljöinstitutet in April 2021

Key benefits:

- Cut cleaning time by up to 35% and use up to 31% less effort than rental towels, as the cloth's suitable for repeated use.
- Protect hands from heat and metal scraps in industrial spaces, thanks to these cloths' heavy-duty design.
- Improve your operation's sustainability – this product packaging is made from 100% recycled fibres and at least 30% recycled plastics.

Environmental

Tork exelCLEAN® cloths

This product does not contain any silicone.

Cellulose Pulp
Polyester
Polypropylene
Functional agents or additives

Raw materials

Cellulose Pulp

Cellulose pulp is produced either from softwood or hardwood coming from responsibly managed forests. The wood chips are boiled together with chemicals to remove the lignin between the fibres. The pulp is TCF (Totally Chlorine Free) or ECF (Elementary Chlorine Free) bleached in order to achieve a clean, bright and strong product, but also to increase the hygienic and absorbent qualities.

Polyester

Polyester fibre is produced from terephthalic acid and ethylene glycol, which react through condensation to polyester resin. The molten resin is spun to fibres through spinnerets and cooled with air. The fibers are then cut to intended fiber length.

Polypropylene

Polypropylene or polypropene is a thermoplastic polymer made from oil. The molten resin is spun to endless fibres through spinnerets and cooled by air. The fibres form a web.

Functional agents and additives

Functional additives could be wet strength agent, antistatic agent and wetting additives/tensides.

Food Contact

This product fulfills the legislative requirements for Food Contact materials, confirmed by external certification performed by a third party. The product is safe for wiping food contact surfaces and may also come occasionally into contact with foodstuffs for a short period of time.

Packaging

Fulfillment of Packaging and Packaging Waste Directive (94/62/EC): Yes
