Series *MHY2/MHW2*

Series *MHY2/Cam Style*

Light and compact size in small bore sizes

Model	Bore size (mm)	Gripping moment* (N·m)	Over length L (mm)	Mass (g)
MHY2-10D	10	0.16	71	70
MHY2-16D	16	0.54	84	150
MHY2-20D	20	1.10	106	320
MHY2-25D	25	2.28	131	560

* At the pressure of 0.5 MPa

Improved mounting repeatability

Auto switch mounting at 4 locations

Resistance to dusty environments

Reduced opening sizes helps prevent foreign objects from entering.

Stainless steel fingers are standard.

* At the pressure of 0.5 MPa

Auto switch mounting at 4 locations

Key connection is ideal for impact resistance.

Key connection between finger and shaft prevents finger angle slippage during impact.

Two finger styles available.

Flat finger type

Right angle finger type

Dustproof construction

Seal arrangement protects gripper from harsh dusty environments.

Bearings are standard.

Series MHY2/MHW2 Model Selection

Model Selection

Selection Procedure

Step 1 Confirmation of Gripping Force

Example

Workpiece weight: 0.05 kg

Guidelines for the selection of the gripper with respect to component weight

- Although conditions differ according to the workpiece shape and the coefficient of friction between the attachments and the workpiece, select a model that can provide a gripping force of 10 to 20 times the workpiece weight, or more.
- If high acceleration, deceleration or impact forces are encountered during motion, a further margin of safety should be considered.

Example) For setting the gripping force to be at least 20 times the work weight;

Required gripping force
 $= 0.05 \text{ kg} \times 20 \times 9.8 \text{ m/s}^2 = 10 \text{ N min.}$

MHY2-16D

- When **MHY2-16D** is selected, the gripping force is determined to be 13 N according to the gripping point distance ($L = 35 \text{ mm}$) and the pressure (0.6 MPa).
- The gripping force is 26 times the workpiece weight and therefore satisfies a gripping force setting value of 20 times or more.

Gripping point $L = 35 \text{ mm}$

Operating pressure: 0.6 MPa

Effective Gripping Force

Series MHY2/MHW2 Double Acting

- Indication of effective gripping force
 The effective gripping force shown in the graphs to the right is expressed as F , which is the impellent force of one finger, when both fingers and attachments are in full contact with the workpiece as shown in the figure below.

MHW2-40D

Step 2 Confirmation of Gripping Point

MHY

MHW

- Workpiece should be held at a point within the range of overhanging distance (H) for a given pressure indicated in the tables on the right.
- When the workpiece is held at a point outside of the recommended range for a given pressure, it may cause adverse effect on the product life.

Auto Switch Mounting

To set the auto switch, insert the auto switch into the installation groove of the gripper from the direction indicated in the following drawing. After setting the position, tighten the attached auto switch mounting set screw with a flat head watchmaker's screwdriver.

Note) Use a watchmaker's screwdriver with a grip diameter of 5 to 6 mm to tighten the auto switch mounting screw. The tightening torque should be about 0.05 to 0.15 N·m.

* Refer to the page 766 for the details on "Auto Switches Connection and Example".

Auto Switch Hysteresis

Auto switches have hysteresis similar to micro switches. Use the table below as a guide when adjusting auto switch positions, etc.

Protrusion of Auto Switch from Edge of Body

The projection of an auto switch from the edge of the body is shown in the table below. Use the table as a guideline for mounting.

Note) 2-color indicator type and perpendicular entry type protrude in the direction of the lead wire entry.

Auto Switch Mounting

- (1) Insert the auto switch bracket into the installation groove of the gripper as shown below and roughly set it.
- (2) Insert the auto switch into the auto switch bracket installation groove.
- (3) After confirming the detecting position, tighten the set screws (M2.5) attached to the auto switch and set it.
- (4) Be sure to change the detecting position in the state of (2).

Auto Switch Mounting Bracket: Part No.

D-M9□(V)/M9□W(V)	BMG2-012

Note) Use a screwdriver with a grip diameter of 5 to 6 mm to tighten the set screws (M2.5). The tightening torque should be 0.5 to 1 N·m. As a rule, it should be turned about 90° beyond the point at which tightening can be felt.

Auto Switch Hysteresis

Auto switches have hysteresis similar to micro switches. Use the table below as a guide when adjusting auto switch positions, etc.

Handling of Mounting Brackets

When auto switch is set on mounting side as shown below, allow at least 2 mm run off space on mounting late since the auto switch is protruded from the gripper edge.

Protrusion of Auto Switch from Edge of Body

The maximum protrusion of an auto switch (when fingers are fully closed) from the edge of the body is shown in the table below. Use the table as a guideline for mounting.
