## Description

The HCPL-4502/HCPL-2503, 6N135/6 and HCPL-2530/ HCPL-2531 optocouplers consist of an AIGaAs LED optically coupled to a high speed photodetector transistor.

A separate connection for the bias of the photodiode improves the speed by several orders of magnitude over conventional phototransistor optocouplers by reducing the base-collector capacitance of the input transistor.
An internal noise shield provides superior common mode rejection of $10 \mathrm{kV} / \mu \mathrm{s}$. An improved package allows superior insulation permitting a 480 V working voltage compared to industry standard of 220 V .
