

2N3055A (NPN), MJ15015 (NPN), MJ15016 (PNP)

MJ15015 and MJ15016 are Preferred Devices

Complementary Silicon High-Power Transistors

These PowerBase™ complementary transistors are designed for high power audio, stepping motor and other linear applications. These devices can also be used in power switching circuits such as relay or solenoid drivers, dc-to-dc converters, inverters, or for inductive loads requiring higher safe operating area than the 2N3055.

Features

- Current-Gain – Bandwidth-Product @ $I_C = 1.0 \text{ Adc}$
 $f_T = 0.8 \text{ MHz (Min) – NPN}$
 $= 2.2 \text{ MHz (Min) – PNP}$
- Safe Operating Area – Rated to 60 V and 120 V, Respectively
- Pb-Free Packages are Available*

There are two limitations on the power handling ability of a transistor: average junction temperature and second breakdown. Safe Operating area curves indicate $I_C - V_{CE}$ limits of the transistor that must be observed for reliable operation; i.e., the transistor must not be subjected to greater dissipation than the curves indicate.

The data of Figures 12 and 13 is based on $T_C = 25^\circ\text{C}$; $T_{J(pk)}$ is variable depending on power level. Second breakdown pulse limits are valid for duty cycles to 10% but must be derated for temperature according to Figure 1.
