- · Respiratory protection: Not necessary if room is well-ventilated.
- · Protection of hands:

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

• *Material of gloves PVC gloves* 

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

- Penetration time of glove material The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed. The determined penetration times according to EN 374 part III are not performed under practical conditions. Therefore a maximum wearing time, which corresponds to 50% of the penetration time, is recommended.
- For the permanent contact gloves made of the following materials are suitable: Nitrile rubber, NBR

PVA gloves
