RS Pro Steel Blue Modular Shelving

Basic bay, 2000mm x 1000mm x 300mm

Product Details

Basic Bay

The basic unit required to construct the first bay or as a starter to a run of units, consists of four uprights, a shelf base and top cover that will each accept 185kg weight, uniformly distributed. The bay as a whole will accept 945kg when the intermediate shelves have been added. Each upright has slots at a 50mm pitch so that the shelves may be easily and accurately adjusted.

Modular Shelf System

The storage rack system is modular in concept and consists of a fully integrated range of bolt free adjustable steel shelving, with a wide range of accessories for small part storage. With such flexibility a wide range of layouts may be created. It is quick, easy and simple to erect or modify, as it does not require time consuming nut and bolt assembly. All the major components are manufactured from high tensile steel with a two tone light and dark blue epoxy coated paint finish.

Features:

- Simple to assemble
- Easy to make suitable for static safe handling
- Each bay suitable for 945kg weight loading
- Security pack available for high value items
- High density storage available using polypropylene small parts bins
- Meets the latest SEMA codes for racking
- May be added to existing modular RS rack systems
