**[Cautions]**

- \* Forced air cooling is required for the maximum output power. Please see instruction manual.
  - \* This power supply requires mounting on metal standoffs 5mm in height. Insulation sheet is required if standoff is not used or less than 5mm clearance is needed.
  - \* Avoid applying stress to surface mount components.
  - \* De-rating is required if the applied input voltage is 90-115VAC.
  - \* The electrolytic capacitor has limited life span which is very much dependent on the actual operating conditions.
  - \* Operating in the presence of chemical vapors or harsh environment can affect the power supply life expectancy.
  - \* Please make sure to read the instruction manual carefully before using this product.
- It should be in the "Instruction Manual" not spec sheet.

\*1 This is the value that measured on measuring board with capacitor of 22μF at 150mm from output terminal.  
Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN: RM103).

\*2 Drift is the change in DC output for an eight hour period after a half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.

\*3 Derating is required.

\*4 Please contact us about dynamic load and input response.

\*5 Please contact us about another class.

\*6 Specification is changed at option, refer to Instruction Manual.

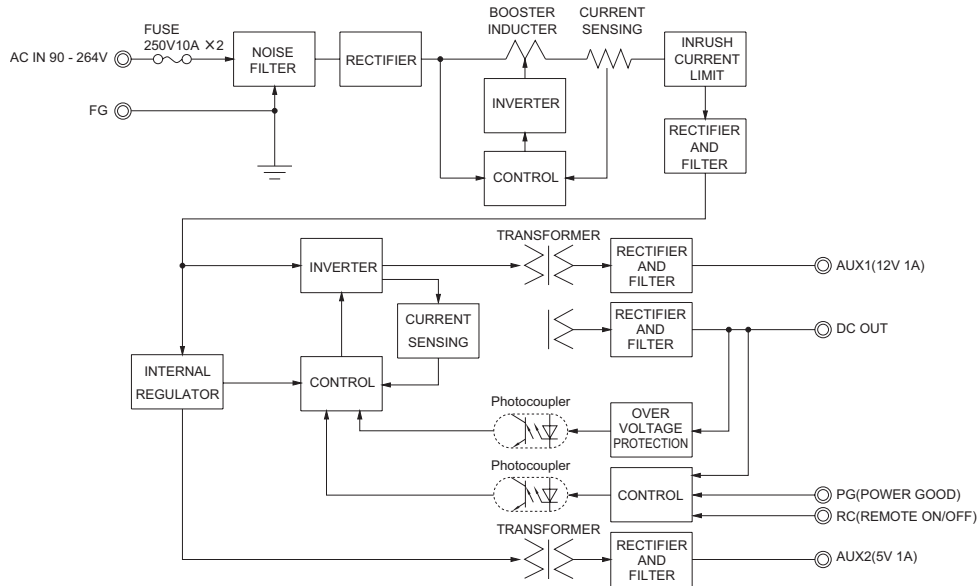

\*7 Applicable when AUX and remote control (optional) is added.

\* To meet the specifications. Do not operate over-loaded condition.  
\* Sound noise may be generated by power supply in case of pulse load.  
\* Parallel operation is not possible.
