

Visual Signals STATIC FILAMENT

BEACONS

Industrial Static Filament Beacons > SF125 Series

Product overview

The SF125 Series is identical to Flashing Filament beacons with the exception that they do not operate through an On and Off cycle. When the unit is energised, the light source stays permanently 'On' - often referred to as

steady mode. The main advantage of this type of beacon is that the light can be controlled by a separate source, i.e. a control panel, giving the unit more flexibility. These units are supplied with a filament lamp. Piezo cannot be controlled separately from light. The light output is increased by the use of a reeded lens. Ideal for local signalling applications.

Features

- Continuously rated
- Suitable for surface or wall mounting
- Suitable for use with conduit BESA box
- Optional wall bracket & protective guard available - see accessory page
- Ideal for local signalling applications
- 360° visibility
- IP65

Material

- UV Stable Polycarbonate Lens
- UV Stable ABS Plastic Base
