When you turn to Spelsberg, you are choosing a partner who is always a step ahead thanks to several decades of experience with state-of-the-art technology. High-quality, refined products and a strong focus on customers assures maximum assurance for everyone involved.

This applies for the functionality of the components - all process steps from consultation and offer preparation to delivery and service, which guarantees that our customers will feel secure with us. In the process, we keep everyone in mind: the assembler who installs our products quickly

and easily and our partners in retail, for whom ordering and stocking of products are made easy with modular designs and accompanying accessories.

The enthusiasm and knowledge of our employees are the essential key to our success. Consequently, unique, high-quality products and tailored solution are only possible with the commitment and passion of our staff. Our customers value us as a series supplier with a comprehensive catalogue and finely tuned systems. We are also an expert consultant for demanding questions involving the housing.

We develop, test and produce tailor-made, comprehensive solutions - but we also make small adjustments according to customer wishes.

Our founder, Ernst Spelsberg would certainly be proud that his values still guide our company after four generations and our staff has the same pioneering spirit of the early years of the company.

Spelsberg is  
represented by  
partners and  
subsidiaries in more  
than 50 countries.

We are there for you **nationally and internationally**

 **spelsberg**

What began with the **vision** of the founding father, Ernst Spelsberg - of making electrical installation **easier** and **safer** - is still being rigorously pursued today in the fourth generation of the family business. **Practical** brand-name products for the branching, protection and distribution of electrical power have long been part of our daily business. But we have never lost sight of our **pioneering**

**spirit** and make every effort to develop safer, user-specific products. **Spelsberg makes life easier for customers.**

Founding father Ernst Spelsberg

Regardless of whether **non-standard small enclosure**, **customised enclosure** or **complete modules** – we are a committed **development partner** as regards the implementation of **customer wishes**. By focusing on the **project business**, we create **tailor-made, individual solutions** for industry every day.

Located **fully**, at the site in Schalksmühle, a consistent **process chain** – from project

management through development, construction, prototyping, tool design, tool making and production – enables fast, **high-quality implementation** of projects. Testing and certifications in accordance with **VDE** and **UL** are carried out in our **in-house testing laboratory**.

**More than 700 active tools weighing up to 8.9 tons.**  
**Use of more than 2,500 tons of material per year.**

IK level impact testing

Housing production

Tool production

Customers who purchase products from Spelsberg receive brand-name quality that is **developed, manufactured and tested in Germany**. In addition to our headquarters in Schalksmühle, we have a production facility in Buttstädt, Thüringen. Spelsberg is also represented by a dense network of company-owned subsidiaries and sales offices worldwide.

#### Schalksmühle – where it all began!

Spelsberg is still headquartered in the city where the first insulating tubes were developed and manufactured in 1904. The company grew continuously and increasingly expanded its production facilities until it outgrew the city centre. As a result, the company relocated to an industrial area in the 1990s, where the

new administrative and production centre were built. All technical departments work together closely and are interlinked there. This is the driving force behind the **innovative power** and short reaction times. Therefore, it is only natural to always remain a step ahead within the sector.

Small distribution board production

Silos

Abox automation junction boxes

#### Buttstädt – the plastics centre

The more than 100 million plastic parts produced by Spelsberg each year do not originate from Schalksmühle alone. The company has also had a production location in Buttstädt, Thüringen, where the high-quality housings are manufactured.

Whether a two-component injection mould, seal foam or a custom mix of materials, Buttstädt also provides the expected variety and quality with state-of-the-art machinery and a large supply of tools.

100 %  
Made in Germany

All processes  
under one roof

UL impact testing

Air conditioning cabinets tested to -30 degrees

When you are looking for tested **safety** and brand-name quality, Spelsberg is the answer. We only use high-quality **brand-name** European raw materials for the more than 100 million injection-moulded parts that we produced each year.

We use a total of 400 raw material types – 95 per cent of which are produced according to our own recipe. Our products with especially high durability bear the **iQ** mark **for industrial quality**.

Dust cabinet

Cover tensile testing

IK impact testing

Water protection testing

Spelsberg operates an **in-house test laboratory** at its headquarters in Schalksmühle for certification purposes. The laboratory and devices are not just **VDE-certified**, they are also **UL-certified**, thus enabling all of the necessary inspections for the international use of series products and special solutions to be conducted in-house.

This possibility is especially important when developing **tailor-made solutions** together with our partners. The aim here is to help our customers get their products to market readiness as rapidly as possible.

The test laboratory is equipped to **state-of-the-art** standards and is the subject of ongoing further development. UL conducts an annual audit as part of the Client Test Data Program to assure that work continues to be carried out at a consistently high standard.

	IP66	IP66	<b>Class of protection</b> (IP code) acc.to DIN EN 60529 (VDE 0470-1)
	3		<b>Maximum number of distribution units</b>
E30-E90	E30-E90	E30-E90	<b>Electrical functional integrity</b> acc.to DIN 4102-12 "E" stands for functional integrity, "30-90" stands for the duration in minutes.
FE180	FE180	FE180	<b>Insulation integrity</b> according to VDE 0472-814, IEC 60331 "FE" stands for the impact of flames or fire, "180" stands for the time in minutes
F400	F400	F400	<b>Operating duration</b> acc. to DIN EN 12101-3 120 minutes function at 400 °C
	90	90	Tested acc. to DIN 4102-2. <b>Functional integrity F90</b> (according to E90) for protecting the electrical installations as per MLAR 2005. Can be individually equipped with type-tested operating materials.
	90	90	Tested acc. to DIN 4102-2. <b>Fire load insulation F90</b> (according to E90) for protecting the exit and escape routes as per MLAR 2005.
S90	S90	S90	<b>Fire-resistance class S 90</b> acc. to DIN 4102-9
	Ü	Ü	<b>Certificate of conformity.</b> Conformity of the construction product with the technical regulations is documented by the "Ü label"
ABZ	ABZ	ABZ	<b>The German general building supervisory approval</b> (AbZ) attests the usability of an object under approval in the sense of the building regulations. It is granted by the German Institute of Structural Engineering (DIBt), Berlin, for construction products and types of construction, where no harmonised European standards have yet been applied for them and which are also not regulated by German standards or regulations.
ABP	ABP	ABP	<b>German general building inspection test certificate</b> (AbP) is granted for unregulated construction products and construction methods whose use is not intended to meet the full safety criteria for structures. The granting is carried out by recognised testing bodies.
10 <sup>2</sup>	10 <sup>2</sup>	10 <sup>2</sup>	<b>Nominal cross section</b> The greatest permissible wire cross-section that can be connected acc. to DIN EN 60998 (VDE 0613) and DIN EN 60999 (VDE 0609)
IK09	IK09	IK09	<b>Level of protection</b> (IK code) to mechanical impact acc. to DIN EN 50102 (VDE 0470-100)
		II	<b>Protection class II</b> operating materials with protective insulation to DIN VDE 0100-410
1000V DC	1000V DC	1000V DC	Maximum <b>voltage DC</b> (DC voltage) as per product standard (system voltage in the PV sector)
690V AC	690V AC	690V AC	<b>Nominal AC voltage</b> (AC voltage). Highest permissible voltage on the junction as per product norm

## Legends Pictograms

15A

Rated current (maximum current in continuous operation) as per product norm

Products for **installation in cavity walls or furnishings** acc. to DIN VDE 0606-1.

Products for **use in concrete construction** acc. to DIN VDE 0606-1

Suitable for the installation of lamps in which dichroic reflector lamps (**cool beam reflectors**) can be used.  
Reduces the thermal load in the light bundle.

Suitable for LED lights

Suitable for use in concrete. **Resistant to momentary temperatures of up to +90 °C** during the hardening process.

**960°C glowing wire testing**

**c UL us** (Underwriters Laboratories) **approved**  
(American and Canadian approval)

**UL EU** New European test certificate  
for certification recognised across Europe.

**DLG FokusTest** for special innovations of machines and technical products  
- predominantly in agricultural and forestry applications.

**AK Air** Ventilation elements to prevent accumulation of condensate  
while maintaining protection class IP65.

The **VDE symbol** stands for the tested safety of the product with regard to electrical, mechanical, thermal and other hazards.

**Vattenfall approval**

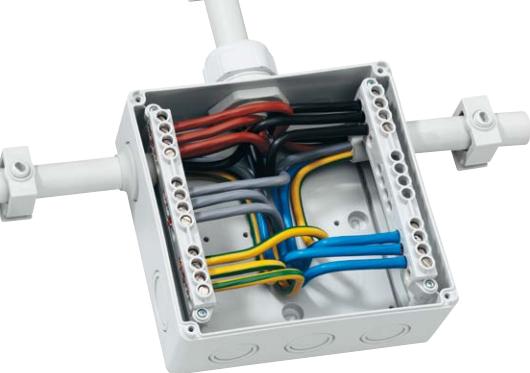

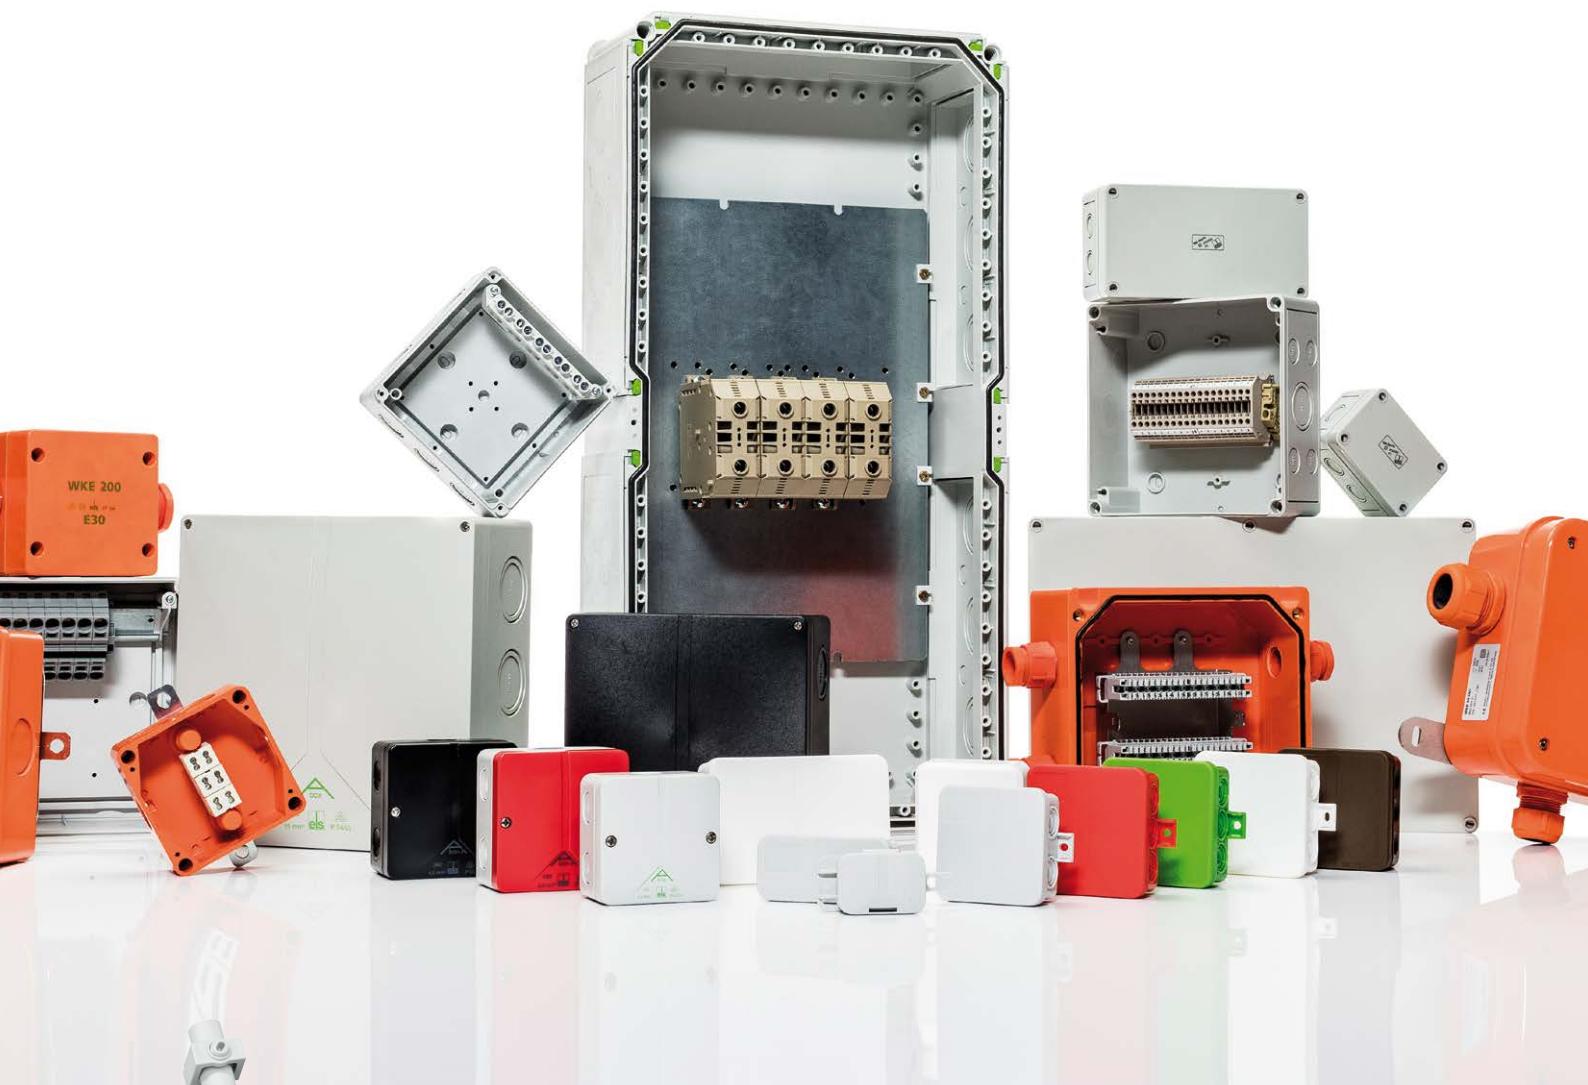

Suitable for the installation of an **electronic domestic supply meter**

**Halogen-free enclosure**,  
without halogens such as fluorine, chlorine and bromine.

**Industrial quality**

Our junction boxes offer lots of space for installation. For example, our popular Abox series with raised terminals. They allow quick and orderly wiring.

From the classic wet room installation about waterproof versions with IP68 up to junction boxes with functional integrity to E90. We have the right solution for every application.

- The Abox SL combines the wiring philosophy of the Abox series with screwless terminal technology.
- Standard installation in wet rooms
- Installation on flammable surfaces
- Installation in agricultural and horticultural premises
- Installation in areas with increased requirements for vibration and shock resistance
- Quick installation thanks to screwless terminal technology
- Maintenance-free
- Vibration- and shock-proof

\* SL = Screwless terminal technology

DLG Test Report 6398

- Shockproof
- Ample room for connection
- Simple test method
- Raised terminals for quick and orderly wiring (from Abox-i 060)
- Quick installation with self-sealing membrane entries (on Abox-i 025 and 040)
- Impact-resistant and shatterproof (e.g. in sports halls)
- With red cover for identifying circuits for safety lighting
- Also suitable for use under extreme conditions

JUNCTION BOX SERIES ABOX-I  
WITH ACCESSORIES  
✓ Resistance to Ammonia  
DLG Test Report 6398

- The Abox-i SL combines the wiring philosophy of the Abox series with screwless terminal technology.
- Standard installation in wet rooms
- Installation on flammable surfaces
- Installation in agricultural and horticultural premises
- Installation in areas with increased requirements for vibration and shock resistance
- Quick installation thanks to screwless terminal technology
- Maintenance-free
- Vibration- and shock-proof

\*SL = Screwless terminal technology

## Junction boxes Abox-i SL\*

**Abox-i SL-2,5/4<sup>2</sup>**

110 x 110 x 67 mm

## Description

## Order no.

Junction box - **Industrial Quality** - acc. to DIN EN 60670-1/-22, weatherproof, shock-proof, halogen-free, with IP66 double-membrane seals, M25, seal range 9 - 18.5 mm, for suitable cable in-feeds see accessories

IP65

490 106 01

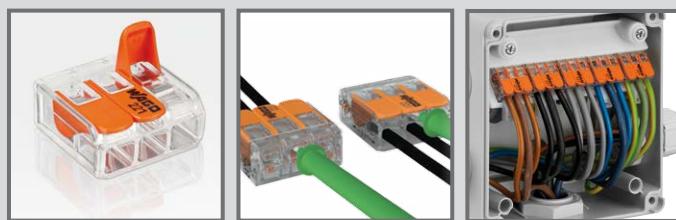

**Abox-i SL-2,5/4<sup>2</sup>**

Grey, with 5-pole high-set screwless terminal,  
for current carrying capacity of 24 A,  
max. cross-section acc. DIN EN 60998:4 mm<sup>2</sup>,  
cross sections that can be clamped per pole:  
3 x 0.2 up to 4 mm<sup>2</sup> rigid and 3 x 0.14 up to 4.0 mm<sup>2</sup> flexible

**Abox-i SL-2,5-KT**

Grey, with high-set terminal carrier, without terminal

490 196 02

**Abox-i SL-6<sup>2</sup>**

140 x 140 x 79 mm

Junction box - **Industrial Quality** - acc. to DIN EN 60670-1/-22, U<sub>i</sub>=690V, weatherproof, shock-proof, halogen-free, with IP66 double-membrane seals, M32, seal range 14 - 21 mm

### Abox-i SL-10<sup>2</sup>

Grey, with 5-pole high-set screwless terminal,  
max. cross-section acc. EN 60998: 10 mm<sup>2</sup>,  
for current carrying capacity of 57 A,  
cross sections that can be clamped per pole:  
4 x 0.5 up to 16 mm<sup>2</sup> rigid and flexible

## Abox-i SL-16<sup>2</sup>

250 x 200 x 115 mm

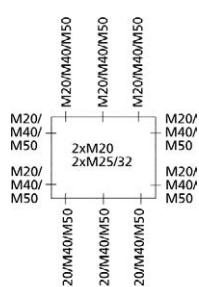

Junction box - **Industrial Quality** - acc. to DIN EN 60670-1-22,  $Ui=690V$ , weatherproof, shock-proof, halogen-free, with sealing kit, for suitable cable in-feeds see accessories

490 835 01

### Abox-i SL-16<sup>2</sup>

Grey, with 5-pole high-set screwless terminal,  
max. cross-section acc. EN 60998: 16 mm<sup>2</sup>,  
for current carrying capacity of 76 A,  
cross sections that can be clamped per pole:  
4 x 0.5 up to 16 mm<sup>2</sup>, rigid, 4 x 0.5 up to 25 mm<sup>2</sup> flexible

- Simple reinstallation as the cast resin is easy to remove
- Testing in accordance with DIN EN 60 529, IP 68, 168 h to a water depth of 15 metres
- Testing in accordance with DIN VDE 0278-623, sleeve tests up to 0.6 / 1 kV
- For cable cross-sections of 1.5 to 10 mm<sup>2</sup>
- Impact-resistant and shatterproof, flame retardant
- UV- and weather-resistant

► The box can be filled cleanly using mixing bags and funnels

#### Applications & use

- Areas subject to flooding
- Washing systems
- Tunnels
- Port facilities

The Abox XT series can defy even the presence of standing water in extreme cases

3 fixture points for  
attaching the screw  
terminal and the pull relief

# 2K-16

Exterior and interior  
mounting, or with  
interior mounting only

# 2K-16

- Junction box as per DIN EN 60670 (VDE 0606)
- 16 entry points
- 3 base inlets consisting of self-sealing, soft inlet membranes
- With exterior and interior mounting, or with interior mounting only

- 3 fixture points for attaching the screw terminal and the strain relief
- Tool for opening the line inlet not required, sealing range 2-14 mm
- Connection table in the lid

- More secure opening and closing mechanism:
  1. Lockable without tools
  2. Can only be opened with a tool
- With practical labelling strip

You can rely on our WKE products for maintaining electrical function. For example, we presented the first fire-proof, freely configurable small distributor with the WKE AK. It has a VDE certificate and also meets on-site requirements, giving you space for sure planning.

## Intrinsic fire resistance

	Protection rating	Max. rated cross-section	Types	Page
	IP54 / IP65	16 mm <sup>2</sup>	Cable junction boxes for buildings (E30 - E90) <b>WKE 2 - 5 Duo</b>	74-78
	IP54 / IP65	16 mm <sup>2</sup>	Cable junction boxes for buildings (E30 - E90) <b>WKE 1 - 5</b>	79-85
	IP66	35 mm <sup>2</sup>	Cable junction boxes (E30) <b>WKE 200 - 400 RK</b>	86-93
	IP66	---	Cable junction boxes (E30) <b>WKE 405 LSA</b>	91
	IP54 / IP65	16 mm <sup>2</sup>	Cable junction boxes for buildings (E30 - E90) <b>WKE 2 - 5 SB</b>	94-97
	IP66	35 mm <sup>2</sup>	Cable junction boxes (E30) <b>WKE 200 - 400 SB</b>	98-99
	IP67	16 mm <sup>2</sup>	Cable junction boxes (E30 - E90) <b>WKE 54</b>	100-101
	IP65	70 mm <sup>2</sup>	Small distributors (F90 fireproof) <b>WKE AK 14-70</b>	102-107
	IP67	16 mm <sup>2</sup>	Cable junction boxes (E30 - E90) <b>WKE Rapid-Box</b>	108-117

Intrinsic fire resistance

- The right solution for every crosssection and application
- Extensive range of accessories such as rawlplugs and attachment bushes for all junction boxes
- External mounting brackets for quick installation
- State-tested by the MPA NRW
- Completely pre-assembled
- Upgradable to IP65
- Ideal for building installations

Products should always also be tested and certified under special operating conditions, to ensure electrical functional integrity. Unfortunately, this is generally disregarded by many users and manufacturers, and products and systems are offered and installed that have only been electrically tested under standard conditions. It has therefore not been verified that these function under the special operating conditions (fire).

Spelsberg is the first manufacturer to have its cable junction and connection boxes tested and certified by VDE under fire conditions. The new junction boxes with fused branch maintain the through-feed function for up to 90 minutes.

Two different variants of the fused branch are available in the WKE range:

### WKE 2-5 SB and WKE 54:

The through-feed functions in case of fire and the fused branch is switched off by a fuse element in case of a fault.

### WKE 200-400 SB:

The through-feed and the fused branch function in case of a fire.

## Junction and connection boxes

**WKE 5 – 4/3 x 16<sup>2</sup> 2SB**

Clamp 1.5 – 16<sup>2</sup> from high-temperature resistant special ceramic,  
junction 2 A

## Accessories supplied:

Drill template, Wall + ceiling attachment set D6,  
6 IP54 attachment busches M20, seal range 8 - 13.5 mm,  
2 IP54 attachment busches M40, seal range 17 - 30 mm,  
2 IP54 double end connectors M40, seal range 8 - 13.5 mm,  
1 IP54 sealing plug M20, Sealing range 8 - 13.5 mm,  
1 IP54 sealing plug M40, seal range 17 - 30 mm

**Sealing plugs**

IP54

## Description

Order no.

Blanking plug with closed sealing membrane, no lock nuts required,  
for wall thickness 1.5 - 4.0 mm

## Sealing area/mm

**WKE 200 ABL**  
External fastening kit V2A, for WKE 200 up to WKE 400,  
Material stainless steel V2A (1.4301), Set = 4 pcs.

890 040 01

**KVS**  
Cable gland protection set, is needed for IK 09 when cable glands are used,  
for WKE 200 up to WKE 400, IK09, Material stainless steel V2A (1.4301),  
Set = 3 pcs.

- Fuse-protected branch
- 16<sup>2</sup> double terminal
- Ideal for use in tunnels and industrial settings

#### E90 maintained function

- According to DIN 4102 Part 12
- Functioning electrical installation over 90 minutes
- Tested by MPA Dresden

#### IP67 protection rating

- According to DIN EN 60670
- No penetration by dust
- Protection against temporary immersion in water, IK07 degree of protection
- According to VDE 0470 part 100; EN 50102
- Protection against external mechanical stress

#### Pressure and suction resistance

- Testing according to the „Safety Lighting Installations for Rail Tunnels“ specifications in Germany

Maintained function is assured if no short-circuit occurs during a fire and if the current flow is not interrupted in the electrical wiring system. Components according to DIN 4102 Part 12 are high-voltage cables, installation cables and wires, busbar trunking, cable ducts, coatings, claddings and necessary fasteners, carrying equipment and fixtures. Cable testing is always performed as an entire system by inspection bodies approved by the German Institute for Building Technology (DiBt).

Further information at [www.spelsberg.com](http://www.spelsberg.com)

- Contacting of uncut conductors up to 50 mm<sup>2</sup>, also retrospectively
- Maintenance-free and fused sheath terminals with rotating, sprung pressure piece and reverse lock
- Tap via spring-cage terminal
- Simplified line mounting during installation

- More economical, lower maintenance system operation
- Uninterruptible power supply via uncut conductors

#### Properties

- 2 basic versions:
- Standard in accordance with IEC 61439-2 (VDE)
- Functional integrity E30 / E60 / E90 per EN 1363 (MPA)

- 2 entry points with terminal to the uncut conductor branch
- Pre-wired to fuse / outlet
- With exterior mounting positions
- Dimensions: 447 x 190 x 105 mm

#### Product variants

- Fused branch with conductor
- CEE sockets 3-pole
- CEE sockets 5-pole

## WKE Rapid-Box

The VDE and MPA-certified switchgear combination

## Rapid-Box 10-50<sup>2</sup> KV

190 x 446 x 106 mm

### Description

### Order no.

Junction box and connection enclosure certified in accordance with EN 61 439, maintenance-free terminal for uncut cables in feed-through, contacting at junction using maintenance-free spring clamp technology, simple attachment by external attachment points, halogen-free enclosure of special Duroplast, suitable for outdoor installation in accordance with EN 61439-2, terminal can withstand a rated current of max. 100 A, clamping range for uncut cables 10<sup>2</sup> - 50<sup>2</sup>, clamping range for cut cables 2.5<sup>2</sup> - 35<sup>2</sup>

2 fuses, Sealing range cable diameter 9 - 14 mm, Terminal 16 mm<sup>2</sup>,  
2-pole pre-wired junction, protected with 10 A circuit breaker per pole,  
with external attachment lugs

## Rapid-Box E90 2,5-16<sup>2</sup> STV

190 x 446 x 106 mm

### Description

Junction box and connection enclosure certified in accordance with EN 61 439, MPA checked as per DIN 4102-2 and EN 1363-2, functional integrity in feed-through 90 minutes for cable E90, suitable for max. 5-pole E90 cable, maintenance-free terminal for uncut cables in feed-through, contacting at junction using maintenance-free spring clamp technology, simple attachment by external attachment points, halogen-free enclosure of special Duroplast, suitable for outdoor installation in accordance with EN 61439-2, Terminal can withstand a rated current of max. 63 A, clamping range for uncut cables 2.5<sup>2</sup> - 16<sup>2</sup>, clamping range for cut cables 2.5<sup>2</sup> - 10<sup>2</sup>

### Rapid-Box E90 2.5-16<sup>2</sup> STV 1 x 3-pole

301 231 01

1 fuse, Sealing range cable diameter 9 - 14 mm, Terminal 16 mm<sup>2</sup>, cover with 3-pole CEE socket, pre-wired with circuit breakers, with external attachment lugs

### Rapid-Box E90 2.5-16<sup>2</sup> STV 2 x 3-pole

301 241 01

2 fuses, Sealing range cable diameter 9 - 14 mm, Terminal 16 mm<sup>2</sup>, cover with two 3-pole CEE sockets, pre-wired with circuit breakers, with external attachment lugs

### Rapid-Box E90 2.5-16<sup>2</sup> STV 1 x 5-pole

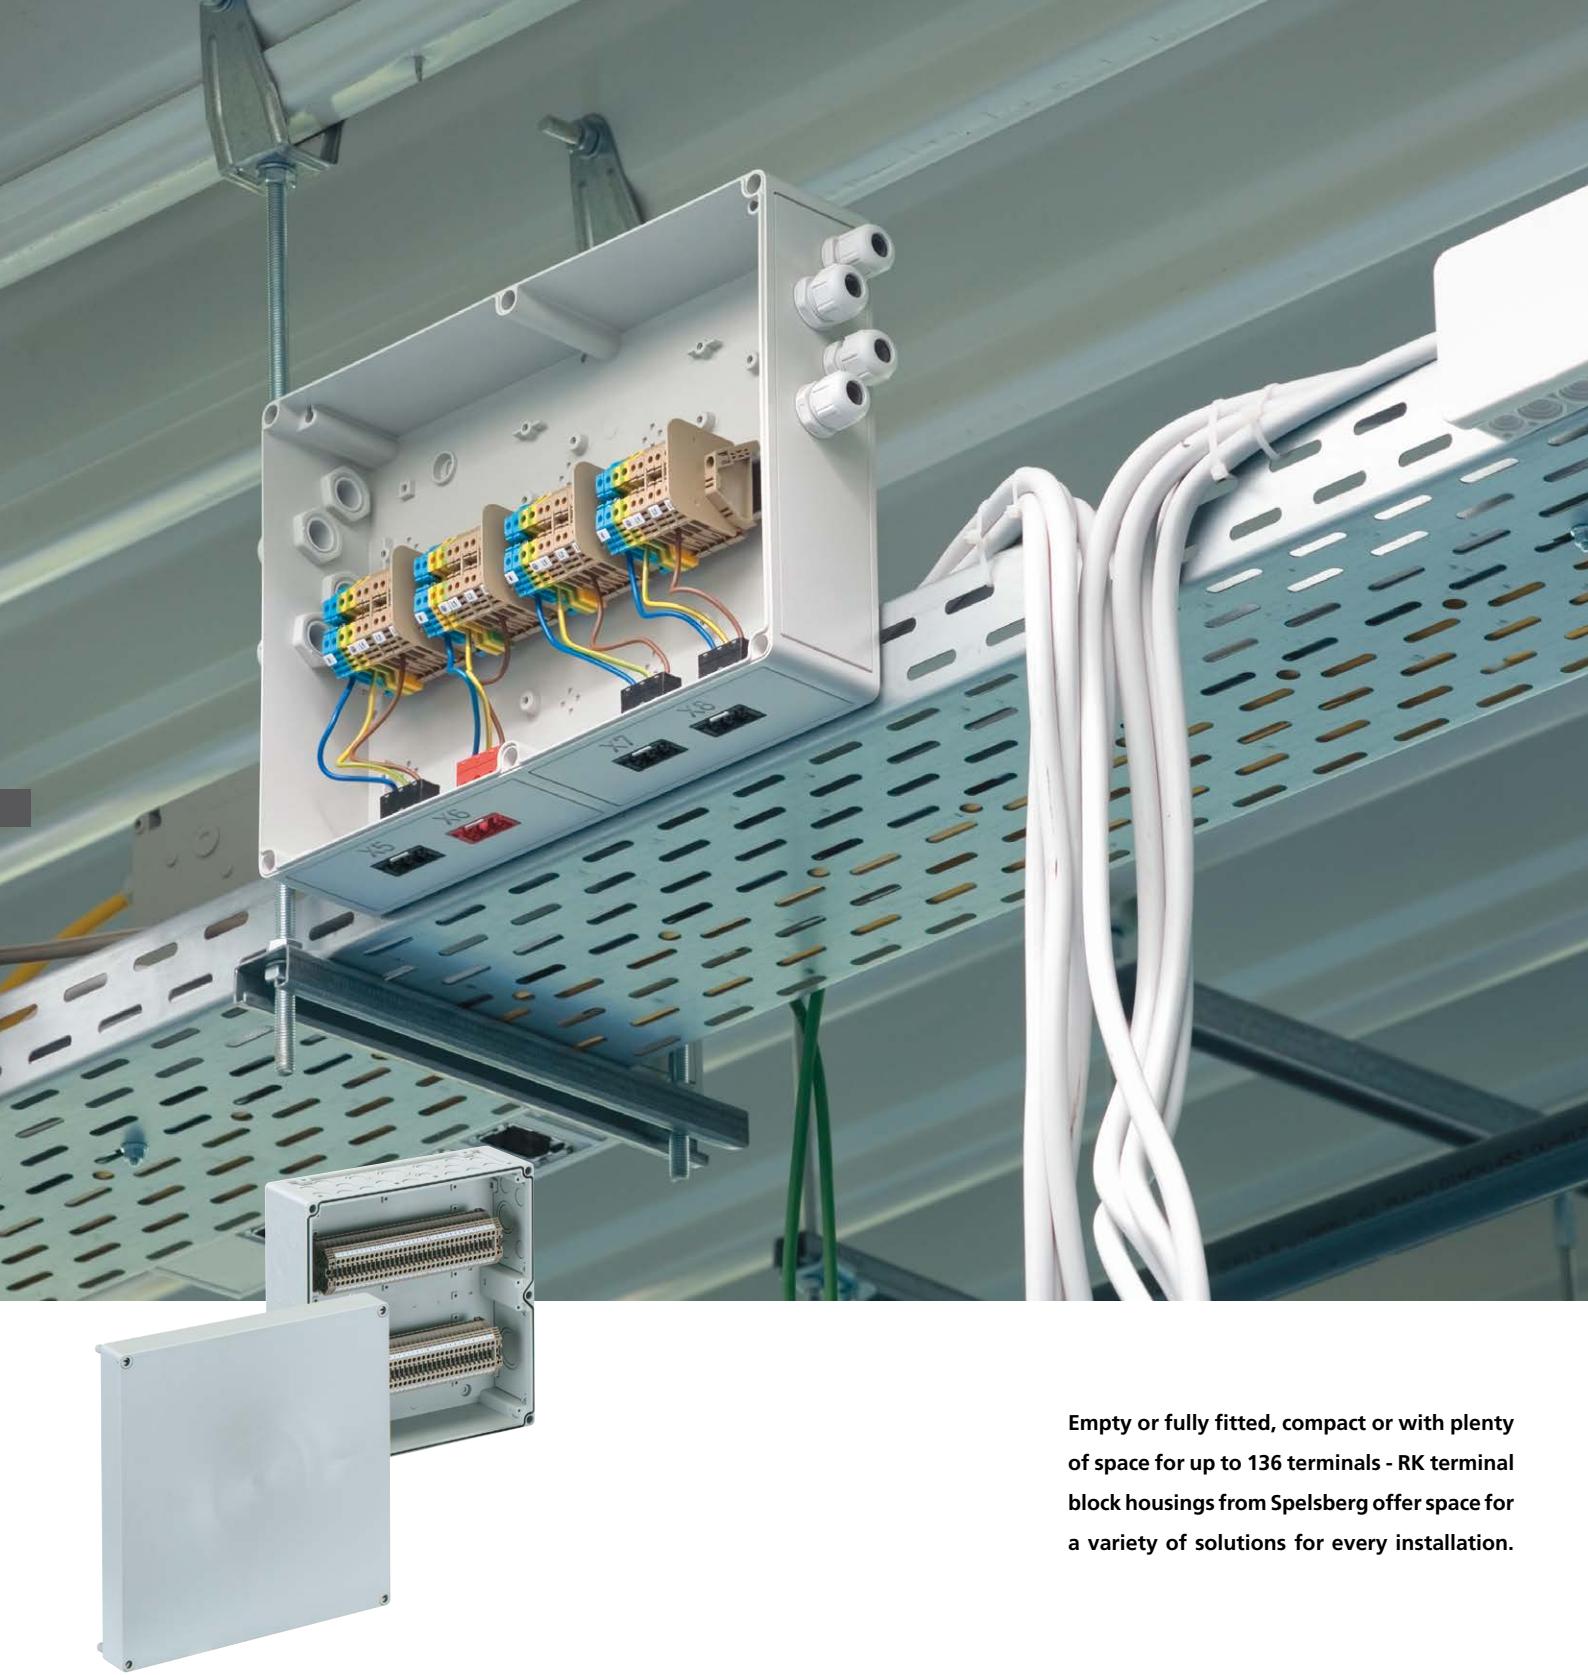

301 251 01

3 fuses, Sealing range cable diameter 9 - 14 mm, Terminal 16 mm<sup>2</sup>, cover with 5-pole CEE socket, pre-wired with circuit breakers, with external attachment lugs

### Rapid-Box E90 2.5-16<sup>2</sup> STV 2 x 5-pole

301 261 01

6 fuses, Sealing range cable diameter 9 - 14 mm, Terminal 16 mm<sup>2</sup>, cover with 5-pole CEE socket, pre-wired with circuit breakers, with external attachment lugs

Empty or fully fitted, compact or with plenty of space for up to 136 terminals - RK terminal block housings from Spelsberg offer space for a variety of solutions for every installation.

Distribution boards

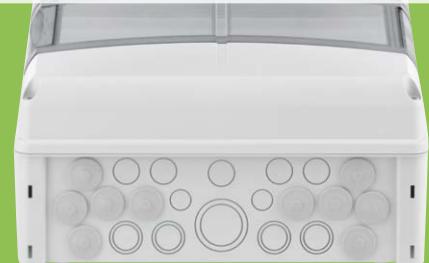

#### Integrated air ventilation elements

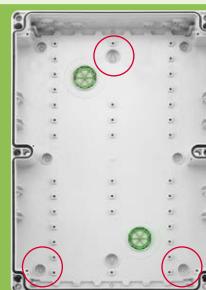

Prevention of condensate water in preservation of protection class IP65

#### Metric knock-outs

A number of knock-outs enable  
**variable cable entries**

#### Three-point installation

Easy installation via keyhole mounting

#### Cable cover mounting

Follow-up installation of optional cable cover possible

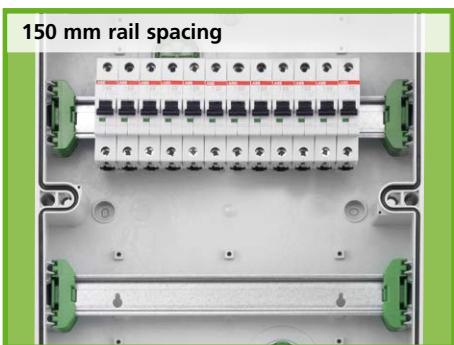

Height-adjustable mounting rail  
For serial installation devices sizes 1 to 3 and special designs

Labelling for installation dimensions  
Engraved dimensions simplify installation

Optional exterior installation  
Installation via **external fixing lugs**

150 mm rail spacing  
Offers plenty of space for wiring

Combinable  
Easily lateral combination via optional **M50 combination connectors**

Lateral knock-outs M40/M50  
Option for Schuko sockets

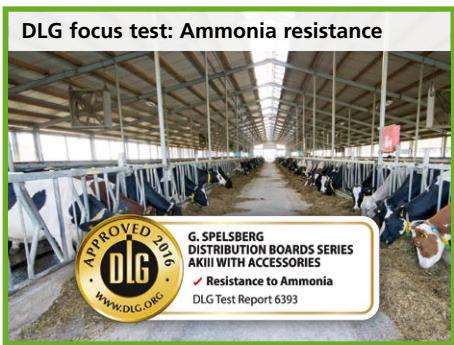

Optimised hinged window  
With ergonomically shaped grips for simple opening and replacement of door end stop

New installation option  
Installation outside of sealing area suitable for systems featuring a maximum measured insulation voltage of 1,000V AC / 1,500V DC

Lid able to be lead-sealed  
Protects against unauthorised access

DLG focus test: Ammonia resistance  
Resistance against stable air for minimum 20 years

Indoor and outdoor installation  
One distribution board for every application

Free of halogen, PVC and silicone  
Highly flame-retardant

**Ventilation seal**

IP44

With ventilation seal to avoid condensation formation in enclosures, flow rate 100 l/min. at 0.1 bar overpressure, thermoplastic elastomer, grey, recommended for insertion on the left and right enclosure sides in different heights (see Technical Appendix - Protection against condensate water)

	f. wall thicknesses/mm	
BST M20	1,5 - 4,5	262 420 01

**AK Mounting flange**

Enclosure wall, for installation in the components of the AK enclosure system for 300 mm wide end walls, with cable covers as standard

AK ABF 1 with pre-embossing, 2 x M32 / M40 / M50, 1 x M40 / M50 / M63	795 048 01
AK ABF 2 Smooth for self-drilling	795 050 01

**AKi Mounting flange**

Enclosure wall, for attachment to components of AKi enclosure system to 300 mm wide sides, with cable covers as standard

AKi ABF 1 with pre-embossing, 2 x M32 / M40 / M50, 1 x M40 / M50 / M63	796 051 01
AKi ABF 2 Smooth for self-drilling	796 050 01

**Lock fittings**

Lock fittings, for installation in hinged doors of distribution boxes AK 03 to AK/AKi 70 and AK/AKi Plus 14 to 56, with 2 keys and installation instructions

AK SGA-1 Identical locks	706 102 01
AK SGA-2 Different closures, max. 10 different closures possible	706 902 01

**Lock bolt set**

## Description

## Order no.

Lock bolt set, for installation in AKe 36 to 48, in conjunction with the lock fittings 706 102 01 / 706 902 01 several hinged windows can be safely locked by only one single lock.

**AK SRS**

706 104 01

**Partition wall**

Partition wall, for installation in the components of the AK enclosure system, from AKe 36/48, universal application for various enclosure heights, with break-out openings, grey

**AK TW**

797 910 01

**Cable cover**

300 x 125 x 90 mm

for installation in the components of the AK enclosure system for 300 mm wide end walls, with cable covers as standard

**AK KBL**

792 400 01

**Masking off strips**

Masking off strips, to close off unused circuit-breaker positions, detachable, grey

**AK AS**

Width 108 mm for 6 distribution units

799 012 01

**AK AS-v**

Width 216 mm for 12 distribution units, lockable

799 013 01

**Bord Case**

On-board case, for closing off unused circuit breaker positions, width 54 mm for 3 distribution units, for 35 mm standard rail, e.g. to house fuses, operating instructions, etc.

**AK BC**

799 103 01

## Standard rail NS 35

### Description

Standard rail acc. to DIN EN 60715, 35 x 7.5, width 35 mm

### Order no.

562 735 01

### AK NS35-250

from 300 x 300 mm, length 250 mm, including spacers

### NS35-216/3

universal floor fixing, length 216 mm, with fixing screws

795 030 01

## AK External attachment set

External fixing lugs, for mounting separate enclosures or small units on flat wall surfaces, can be fixed to the box base at an angle of 0°, 45°, or 90°, wall gap 7 mm, material stainless steel, suitable for all AK enclosures from 300 mm front,

793 004 01

### AK ABL-ES

Set = 4 pcs.

## Z-wall profile

Z-wall profile, length 2 m, with 8 M6 cylinder screws and 8 captive push nuts, wall clearance 70 mm, Material: galvanised steel

070 800 01

### ZPR

## KF 12 hinged window

228 x 80 mm

IP65

Hinged window, for fitting to enclosure cover, for maximum 12 distribution units à 17.5 mm, with transparent hinged window, frame with sealing on both sides, with drilling template and fixing screws

567 412 01

### KF 12

## SF 12 inspection window

228 x 80 mm

IP65

Inspection window, for fitting to enclosure cover, transparent inspection glass, with drilling template and fixing screws

568 012 01

### SF 12

**PE/N terminal block**

## Description

## Order no.

PE/N terminal block for mounting onto 35 mm standard rail, e.g. in meter housings

**KLS N 35**N terminal (blue) 3 x 25 mm<sup>2</sup>, 2 x 16 mm<sup>2</sup>

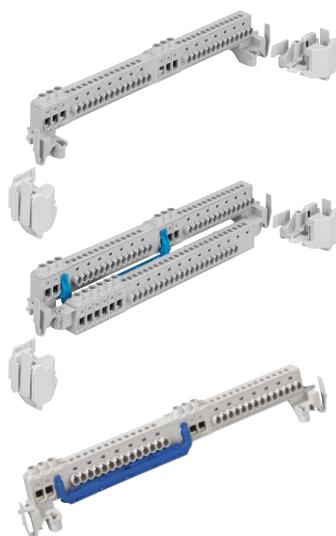

790 905 01

**KLS PE 35**PE terminal (green) 3 x 25 mm<sup>2</sup>, 2 x 16 mm<sup>2</sup>

790 805 01

**PE/N screwless terminal rail**

PE/N screwless terminal, for installation in AK/AKi small-scale distributors from AK/AKi 14, as additional terminals or for replacement

**AK 14 PEN-SL**Single-stage PE/N terminal rail with each, 3 screwable clamping points, 2.5 mm<sup>2</sup> - 16 mm<sup>2</sup> and , 14 screwless terminal points , 1.5 - 4 mm<sup>2</sup>

790 317 01

**AK 28 PEN-SL**Two-row PE/N terminal rail each with, 6 screwable clamping points, 2.5 mm<sup>2</sup> - 16 mm<sup>2</sup> and , 21 / 2 x 14 screwless clamping points 1.5 mm<sup>2</sup> - 4 mm<sup>2</sup>

790 327 01

**AK N-SL**Single-stage N terminal rail, with 4 screwable clamping points 2.5 mm<sup>2</sup> - 16 mm<sup>2</sup>, and 28 screwless clamping points 1.5 mm<sup>2</sup> - 4 mm<sup>2</sup>, Following removal of the cross-connection, distribution into, 2 N potentials each with 3 screwable terminal points, 2.5 mm<sup>2</sup> - 16 mm<sup>2</sup> and 14 screwless, Terminal points 1.5 mm<sup>2</sup> - 4 mm<sup>2</sup>

790 318 01

**PE/N terminal rail**

PE/N terminal rail, for installation in AK/AKi small-scale distributors as additional terminals or for replacement

	Number of pole	Clamping range	
AK 03 PEN-S	2 x 4-pole	1x16 / 3x6 mm <sup>2</sup>	790 204 01
AK 05 PEN-S	2 x 5-pole	2x16 / 3x6 mm <sup>2</sup>	790 205 01
AK 09 PEN-S	2 x 7-pole	2x16 / 5x6 mm <sup>2</sup>	790 207 01

AK 14/28 PEN-S	2 x 17-pole	1x25 / 4x16 / 12x6 mm <sup>2</sup>	790 217 01
AK 42 PEN-S	2 x 25-pole	1x25 / 6x16 / 18x6 mm <sup>2</sup>	790 225 01

	Description	Order no.
<b>4-way neutral conductor terminal</b>	Auxiliary terminal, for subsequent attachment to AK PE/N basic terminals from AK 14	
	<b>AK N 47-S</b> 4 x 7-pole,, with each 2 clamping points 16 mm <sup>2</sup> , 5 clamping points 6 mm <sup>2</sup>	790 047 01
<b>1-way neutral conductor terminal</b>	Auxiliary terminal, for subsequent attachment to AK PE/N-S basic terminals from AK 42	
	<b>AK N 17-S</b> 1 x 7-pole,, with each 2 clamping points 16 mm <sup>2</sup> , 5 clamping points 6 mm <sup>2</sup>	790 007 01

### STV-L

Empty, without fittings but with PE/N terminal

- **High mechanical strength**
- **Insensitive to temperature**
- **Compact dimensions**
- **Uses quality sockets**
- **Can be combined**

## **STV** **empty enclosures**

Description	Order no.
Socket casing - industrial quality, empty enclosure, prepared for the installation of Schuko- and CEE- sockets, with PE/N clip, masking and labelling strips, insulating seals, additional double-membrane seals	
<b>IP44</b>

**Cable cover**

300 x 125 x 90 mm

for installation in the components of the AK enclosure system for 300 mm wide end walls, with cable covers as standard

AK KBL

792 400 01

**Bord Case**

## Description

On-board case, for closing off unused circuit breaker positions, width 54 mm for 3 distribution units, for 35 mm standard rail, e.g. to house fuses, operating instructions, etc.

799 103 01

AK BC

**Lock fittings**

Lock fittings, for installation in hinged doors of distribution boxes AK 03 to AK/AKi 70 and AK/AKi Plus 14 to 56, with 2 keys and installation instructions

706 102 01

**AK SGA-1**  
Identical locks

706 902 01

**AK SGA-2**  
Different closures, max. 10 different closures possible

**AK External attachment set**

External fixing lugs, for mounting separate enclosures or small units on flat wall surfaces, can be fixed to the box base at an angle of 0°, 45°, or 90°, wall gap 7 mm, material stainless steel, suitable for all AK enclosures from 300 mm front,

793 004 01

**AK ABL-ES**  
Set = 4 pcs.

**Z-wall profile**

Z-wall profile, length 2 m, with 8 M6 cylinder screws and 8 captive push nuts, wall clearance 70 mm, material: galvanised steel

070 800 01

ZPR

The empty enclosures from Spelsberg offer a wide variety of housing sizes and materials. However, should you not find exactly what you are looking for among the many variations of standard products, we would be pleased to design a product with you that is tailored precisely to your needs. Take advantage of the space available for this customisation.

## Empty enclosures Content

# Empty enclosures TK PC

- ▷ Ammonia resistance
- ▷ Resistance against stable air for minimum 20 years

- 14 basic enclosures with up to three different cover heights
- Grey or transparent covers
- Plastic: choice of polystyrene (TK PS) or glass-fibre-reinforced polycarbonate (TK PC)
- Side walls smooth or with metric knockouts
- Modular tools: Economical customisation

## Empty enclosures TK PS / TK PC

176

### Example of TK designation scheme

- 8 aluminium enclosures
- Powder-coated for corrosion protection
- Colour: light grey, similar to RAL 7035
- Material: Aluminium die-cast
- Effective protection against electromagnetic interference (EMI) and electrostatic discharge (ESD)
- Internal dimensions similar to TK PS / TK PC, mounting plates and standard rails likewise compatible

IP66

IK09

**AK Mounting flange**

Enclosure wall, for installation in the components of the AK enclosure system for 300 mm wide end walls, with cable covers as standard

**AK ABF 1**

with pre-embossing, 2 x M32 / M40 / M50, 1 x M40 / M50 / M63

795 048 01

**AK ABF 2**

Smooth for self-drilling

795 050 01

**AKi Mounting flange**

Enclosure wall, for attachment to components of AKi enclosure system to 300 mm wide sides, with cable covers as standard

**AKi ABF 1**

with pre-embossing, 2 x M32 / M40 / M50, 1 x M40 / M50 / M63

796 051 01

**AKi ABF 2**

Smooth for self-drilling

796 050 01

**Padlock kit**

Padlock kit for upgrading the housing cover to lockable hinged door, incl. padlock, 2 hinges, fixing screws, cover plugs and drilling template

**VSG**

from TK PS/PC 1811 onwards and AKL/AKi 1

190 100 01

**Hinge set**

External hinge set for retrofitting the enclosure cover to hinged door, incl. 2 hinges, fixing screws, cover plugs and drilling template

**ASS-gro**

External hinge set large, from TK PS/PC 1811 and from AKL/AKi 1

190 005 01

## Partition wall

### Description

Partition wall, for installation in the components of the AK enclosure system, from AK 28 / AKL 2 / AKi 2, universal application for various enclosure heights, with break-out openings, grey

### Order no.

AK TW

797 910 01

## AK External attachment set

External fixing lugs, for mounting separate enclosures or small units on flat wall surfaces, can be fixed to the box base at an angle of 0°, 45°, or 90°, wall gap 7 mm, material stainless steel, suitable for all AK enclosures from 300 mm front,

AK ABL-ES

Set = 4 pcs.

793 004 01

## Z-wall profile

Z-wall profile, length 2 m, with 8 M6 cylinder screws and 8 captive push nuts, wall clearance 70 mm, material: galvanised steel

ZPR

070 800 01

- 16 standard enclosure sizes up to 330 x 230 mm
- Powder coating to prevent corrosion
- Colour: silver grey, similar to RAL 7001
- Material: Aluminium die-cast

- Effective protection against electromagnetic interference (EMI) and electrostatic discharges (ESD)
- An even higher level of protection can be achieved by using conductive seals (available on request) between the components of the enclosure
- High resistance to chemicals
- Special designs on customer request

#### Application areas

- Stops
- Pumping systems
- Measuring stations
- Telecommunications devices
- Charging stations
- Urban furnishings
- Allotments

#### Characteristics

- Compact construction
  - For AC connections
- SVi:**  
Flexible communication options,  
numerous housing variants

#### Benefits

- No corrosion
- For use in harsh environments
- Easy installation
- Individual adaptation to spatial conditions
- Application-optimised mains connection solutions, quick to implement

#### Installation solutions for exposed concrete

The visible face of exposed concrete is a reflection of the formwork surface. Perfect surfaces with installation material: The innovative reinforcement box enables a perfect electrical installation within exposed concrete surfaces, without causing damage to the formwork surfaces.

#### Patented spring technology

The patented spring system of the reinforcement box compensates for different depths of concrete cover over the reinforcement and ensures optimum pressure on the formwork. The reinforcement box precisely adapts to every wall thickness like a shock absorber and guarantees an exact fit in the exposed concrete wall.

**The reinforcement box - reveals the best side of exposed concrete**

## **U 71 reinforcement adapter**

300 x 76 x 35 mm

### Description

Reinforcement adapter for the support of all U71 sockets (except for Perilex), combinable with a standard spacing of 71 mm, face concrete for the opposing formwork without support with preinstallation in the reinforcement for the concrete construction

Order no.

**IBT BWA**

986 000 01

for installation box K4 EK

- ◀ Can be combined tool-free at standard spacing of 71 mm

Boxes for wall thicknesses in excess of 100 mm were developed specially for the lightweight concrete industry to satisfy the special requirements of its production techniques.

Different fronts ensure shorter installation times and reduced installation costs.

- Universal mounting options (front part smooth, open and with embossing)
- Box for mounting devices on both sides (100 mm wall thickness)

Crack formation in lightweight concrete walls is now a thing of the past! The new lightweight concrete boxes from Spelsberg have deep-set conduit entries up to 4 x M25 / M32. The concrete cover of up to 37 mm ensures **crack-free walls**.

**U 71 blank base BSK**

71 x 71 x 25 mm / 21

## Description

## Order no.

Blank base, base for supporting IBT boxes and boxes in opposing formwork in conjunction with support spars, can be combined via snap-in connection, if fitting the blank base using nails, magnet, adhesive, the fixing points must be plastered subsequently, for fitting:  
1. the U 71 boxes in opposing formwork, at a 71 mm spacing, can also be combined with interconnecting frame for extreme loading, 2. the mounting boxes K3 EK and K4 EK with opposing shuttering with 2 or 4 sockets and 3 support spars each in the corners

**U 71 BSK-NA**

height 25 mm, for nail fixing

979 530 01

**U 71 BSK-2**

height 25 mm, for exposed concrete, minimum visibility of the feet

979 530 02

**U 71 BSK-K**

height 21 mm, for adhesive fixing

979 538 01

**U 71 BSK**

height 21 mm, for magnet fixing, magnet hole has to be plastered later

979 539 01

**BL blank strip**

21 x 110 x 15 mm

Blank cleat for mounting the mounting box K0 EK and the mounting box K15 EK for opposing formwork, 2 pieces are required for each box

**K0 K15 BL**

2 blank cleats per box required

979 532 01

**K1 K2 BL blank cleats**

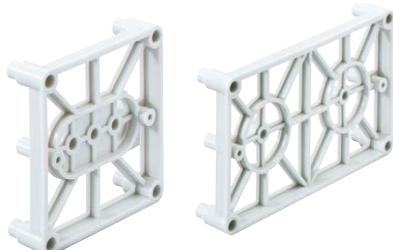

21 x 90 x 15 mm

Blank cleat for fixing: 1. The special boxes K1 EK and K2 EK boxes for opposing formwork, 2. The cone funnel for transfer from risers, 2 pieces are required for each insert

**K1 K2 BL**

979 531 01

**BS blank base**

Blank base BS to support the BS boxes, for opposing formwork in conjunction with support spars

**BS 1-BSK**

86 x 86 x 25 mm, blank base

974 431 01

**BS 2-BSK**

146 x 86 x 25 mm

974 432 01

**BSK blank base**

## Description

## Order no.

Blank base to support the conduit elbows including conduit ferrules, for opposing formwork in conjunction with support spars

**BSK 1**

for conduit ferrules 970 518 01

970 500 01

**BSK 2**

for conduit ferrules 970 523 01 / 970 530 01

970 505 01

**STH-STU support buffer**

Support buffer as an attachment for support spars when using magnetic clamps or adhesive in vertical formwork (instead of the blank base)

**STH-STU**

979 535 01

**STH support spars**

Ø 6 mm

Support spars for various wall thicknesses in opposing formwork, always used in conjunction with blank base or back mounted box, spar length = wall thickness minus 1 cm, 2 support spars per socket, 4 support spars for extreme loads

	Wall thickness	Spar length	
STH 70	8 cm	7 cm	979 570 01
STH 90	10 cm	9 cm	979 590 01
STH 100	11 cm	10 cm	979 600 01
STH 110	12 cm	11 cm	979 610 01
STH 130	14 cm	13 cm	979 630 01
STH 140	15 cm	14 cm	979 640 01
STH 150	16 cm	15 cm	979 650 01
STH 170	18 cm	17 cm	979 670 01
STH 190	20 cm	19 cm	979 690 01
STH 230	24 cm	23 cm	979 730 01
STH 240	25 cm	24 cm	979 740 01
STH 290	30 cm	29 cm	979 790 01

**Fixings for wood / plastic formwork**

Fixings for wood / plastic formwork, for site cast concrete or poured concrete construction on wooden formwork, use 2 nails for extreme loading

**NA-AL**

aluminium nail, 40 mm, long-ridged

979 242 01

**NA-AL/gl**

aluminium nail, 40 mm, smooth

979 243 01

## Fixings for plastic/steel formwork

Description	Order no.
Fixings for plastic/steel formwork	
<b>KR</b> adhesive black, as a non-damaging fixing, when using blank and flange, (usable several times), with vertical formwork, also use support spars	979 248 01
<b>HFL</b> support flange 50 mm Ø, plastic	979 250 01
<b>HC</b> support clip for mesh thickness as an auxiliary fixing for the boxes onto (2 to 3 clips per box), only usable with support spars	979 245 01

## Fixings for steel formwork

Fixings for steel formwork	
<b>NAS-AL</b> Spreader nail, aluminium 40 mm, with plastic plug for fixing the boxes on the steel formwork (drilled hole 5.5 mm), has proven excellent for tunnel formwork	979 240 01
<b>ANSW</b> weld on screw M6 x 10 mm, Inexpensive, secure fixing of the box, onto steel formwork without drilling	979 260 01
<b>HM</b> magnetic clamps, 50 mm Ø, normal, pull-off strength 120 +/- 20 N	979 280 01
<b>HM-UNI</b> magnetic clamps, 50 mm Ø, extra strong, pull-off strength 300 +/- 20 N=30 kp	979 299 01
<b>MA</b> magnetic lifter for dismounting the magnetic clamps HM and HM-UNI, in two parts	979 300 01

## Fixings for conduits and cables

Fixings for conduits and cables	
<b>KBI 1</b> clip 4.6 x 180 mm	979 136 01
<b>ABH 1</b> spacer, 40 x 40 x 33 mm	979 135 01
<b>ROS</b> conduit support, grey, height 21 cm	979 230 01

## RVB conduit connector

Conduit coupling (without conduit) with strain relief, grey, for flexible metric electrical installation conduits	
<b>RVB 20</b> for long-ridged pipes M20	970 220 01
<b>RVB 25</b> for long-ridged pipes M25	970 225 01
<b>RVB 32</b> for long-ridged pipes M32	970 232 01
<b>RVB 40</b> for long-ridged pipes M40	970 240 01

**IBT LZA hand hole punch**

## Description

## Order no.

Hand hole punch, punching tool for making precision fit entries in concrete boxes, perforation always 1 - 3 mm smaller than the conduit / conductor diameter

**IBT LZA-OE**  
**IBT LZA-18**  
**IBT LZA-23**

without punch set  
 with 18 mm punch set for pipe M20  
 with 23 mm punch set for pipe M25

978 100 01  
 978 118 01  
 978 123 01

**WED expansion mandrel**

Expansion mandrel, assembly tool when inserting conduit

**WED**  
 expansion range 9 - 25 mm Ø

979 155 01

**Punch sets**

Punch sets as replacements or where expansion is required for IBT LZA hand hole punch

	hole diameter	for cable / conduit type (outside Ø)	
<b>IBT STE-LZA/10</b>	10 mm	NYY 3 x 1.5 (11mm)	978 910 01
<b>IBT STE-LZA/14</b>	14 mm	M16 (16 mm)	978 914 01
<b>IBT STE-LZA/18</b>	18 mm	M20 (20 mm)	978 918 01
<b>IBT STE-LZA/23</b>	23 mm	M25 (25 mm)	978 923 01

**LST hole punch**

Hole punch for large scale operation in component factories, with fixing devices

**LST**  
 with 18 mm and 23 mm punch sets, as well as expansion mandrel

979 162 01

**Punch sets**

Punch sets for LST hole punch

	hole diameter	for cable / conduit type (outside Ø)	
<b>IBT STE-LST/14</b>	14 mm	M16 (16 mm)	978 814 01
<b>IBT STE-LST/18</b>	18 mm	M20 (20 mm)	978 818 01
<b>IBT STE-LST/23</b>	23 mm	M25 (25 mm)	978 823 01
<b>IBT STE-LST/30</b>	30 mm	M32 (32 mm)	978 830 01
<b>IBT STE-LST/39</b>	39 mm	M40 (40 mm)	978 839 01

**BS MBR assembly bridge**

## Description

## Order no.

Assembly bridge for the installation of British standard equipment in boxes BS 1 and BS 2, can be clicked into place and moved sideways

**BS MBR**

2 pcs. required per box

974 120 01

**BS ES installation screws**

Installation screws for fixing BS equipment

**BS ES-30**

3.5 x 30 mm 974 130 01

**BS ES-40**

3.5 x 40 mm 974 135 01

**BS ES-50**

3.5 x 50 mm 974 150 01

**HW LFR hole cutter**

Hole cutter, 120 mm Ø, suitable for wood and gypsum concrete plates

**HW LFR-120**

HW hole cutter HW LFR-120, will fit any commercial drill chuck, diameter 120 mm Ø, cutting depth 40 mm

925 121 01

**Hole cutter**

79 mm

Hole cutter

**LFR**

through opening: M16-32, drill hole: 16.5-32.5 mm

195 995 01

**ES installation screws**

Additional device screws for mounting built-in devices in cavity wall outlet sockets

**ES-10**

3.1 x 10 mm

979 105 01

**ES-18**

3.1 x 18 mm

979 106 01

**ES-25**

3.1 x 25 mm

979 107 01

- ▲ Use as a back mounted box from wall thickness of 240 mm
- ▶ Integrated M25/M32 conduit stopper prevents the conduits from being pushed right through

- ▶ Simple assembly in site-cast concrete ceilings and walls as well as in pre-cast concrete
- ▶ IBTronic makes it possible to conveniently and elegantly integrate halogen and LED lights, loudspeakers and high-quality electronic components into concrete ceilings.
- ▶ IBTronic-TT enables simple installation of electronic safety transformers.

STH 240	25 cm	24 cm	979 740 01
STH 290	30 cm	29 cm	979 790 01

- For use with cast-in-place concrete and precast factory
- Low costs, faster installation
- Conduit adaptation without special tools
- Centreline marking on the housing
- Easy alignment of the housing on the formwork table
- Nail fastening outside the housing
- Conduit entry points above the prefabricated ceiling

- LED power, 15-47 watts
- 8 integrated conduit entry points for straight and corrugated conduits (4 x M20, 4 x M25)
- Integrated conduit stoppers and strain relief
- Simplified feed-in and through-wiring
- Knockout diaphragm entries

**Available from June 2017!**

**Universal mounting enclosure IBT LED**  
for installing NV/HV/LED luminaires and loudspeakers

**IBT LED 3 E**

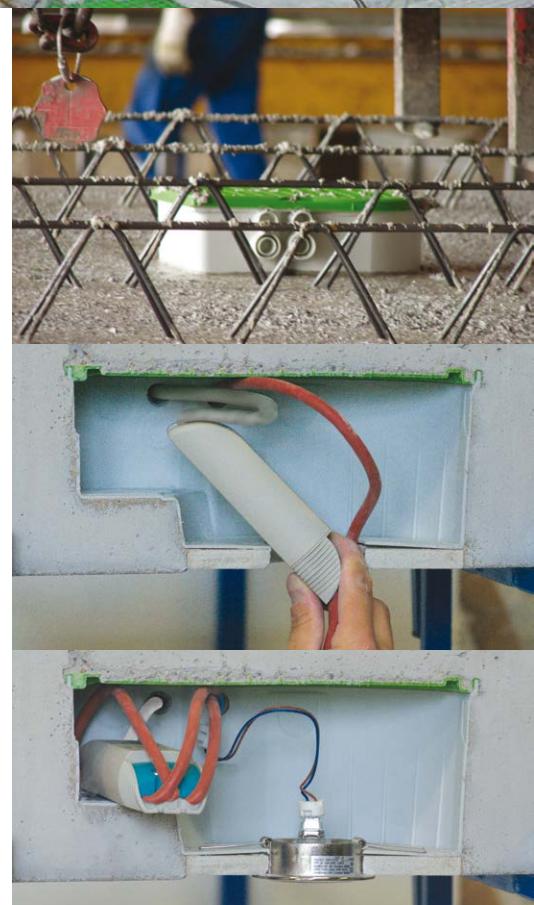

outlet aperture: Fermacell® plasterboard, variable up to max. 200 x 300 mm, 8 combi-conduit entry points 4 x M16, 4 x M19 integrated conduit stopper and strain relief for conduits M16, M19

- Universal installation housing for mounting LV/HV/LED luminaires and loudspeakers in pre-cast concrete
- Fermacell®-plasterboard with tolerance compensation of Ø 185 mm
- Outlet aperture: variable to max. 150 mm
- Integrated transformer tunnel up to max. 150 VA
- Volume of 4.5 litres
- Simplified installation of transformers due to short cable runs
- Easy alignment due to marking of the centre of cover and enclosure
- 4 stainless steel clamps for secure hold, Fermacell® plasterboard can be used throughout
- No problem to find again after plastering thanks to plaster mark
- Stackable: - Minimal stock  
- Protects Fermacell® plasterboard

#### ► Light installation

- Drilling of ceiling aperture up to Ø 150 mm with the Spelsberg Profi hole cutter
- Transformer installation up to 150 VA
- For installation of VDE-approved luminaires according to DIN EN 60598 and with  $\nabla$  or  $\nabla \nabla$  marking, luminaire power up to 50 W

IPX4

B

90°C

## Concrete Installation IBTronic XL H 185

**IBTronic XL**

255 x 280 x 130 mm

## Description

## Order no.

Universal mounting enclosure with additional connection space (e.g. for installing an electronic safety transformer) for pre-cast concrete structures, halogen-free, for installing NV/HV/LED luminaires and loudspeakers, suitable for adhesive and nail fixing, for the installation of VDE-approved lights per DIN EN 60598 (VDE 0711), as well as with F identification or MM identification, Max. installation height LV lights: 105 mm, HV lights: 110 mm, Lamp output max. 50W/LED 25W

IPX4

90°C

**IBTronic XL H 185 F**

outlet aperture: Fermacell® plasterboard, variable to max. Ø 150 mm,  
8 combi-conduit entries 4 x M20, 4 x M25, integrated conduit stopper  
for conduits M20, M25

976 604 01

**IBTronic XL H 185 FE**

outlet aperture: Fermacell® plasterboard, variable to max. Ø 150 mm,  
**8 combi-conduit entries 4 x 16 mm, 4 x 19 mm,**  
**integrated conduit stopper and strain relief for 16 mm**  
**and 19 mm pipes**

976 604 02

- Universal installation housings for subsequent mounting in prefabricated ceilings
- For installation of LV/HV/LED luminaires
- The 2-part light adapter can easily compensate ceiling thickness of 45-70 mm without any problem. The ceiling aperture is 76 mm, the outer ring diameter of the luminaire must be at least 85 mm. The retaining springs are locked in the light adapter. The light unit is mounted so that the luminaire's cover ring is flush.

#### ► Light installation

- Ø 82 mm core hole drilling
- Fix enclosure and install conduits
- Transformer installation up to 150 VA
- For installation of VDE-tested luminaires according to DIN EN 60598 and with  $\nabla$  or  $\nabla\nabla$  marking, luminaire power up to 50W Alu

#### ► Flexible entry method

- 8 integrated conduit entries for smooth and corrugated conduits (4 x M20, 4 x M25)
- Integrated conduit stopper and strain relief
- Knock-out membrane entries, conduit entries above the prefabricated ceiling

Max.50W

## Concrete Installation IBTronic XL Drillbox

## IBTronic XL Drillbox

255 x 280 x 92 mm

### Description

### Order no.

Universal mounting enclosure with additional connection space (e.g. for installing an electronic safety transformer) for pre-cast concrete structures, halogen-free, for installing NV/HV/LED luminaires, suitable for subsequent installation in prefabricated ceilings 45-70 mm with Ø 82 mm core drilling, for the installation of VDE-approved lights per DIN EN 60598 (VDE 0711), as well as with F identification or MM identification, max. installation height LV lights: 105 mm, HV lights: 110 mm, lamp rating max. 50 W Alu

### IBTronic XL Drillbox

outlet aperture: Ø 76 mm, ORD (Outer Ring Diameter), min. Ø 85 mm, 8 combi-conduit entries 4 x M20, 4 x M25, integrated conduit stopper for conduits M20, M25

976 801 01

### IBTronic XL Drillbox E

outlet aperture: Ø 76 mm, ORD (Outer Ring Diameter), min. Ø 85 mm, 8 combi-conduit entries 4 x 16 mm, 4 x 19 mm, integrated conduit stopper and strain relief for 16 mm and 19 mm pipes

976 801 02

## Accessories

Recommended accessories: IBTronic XL Drillbox, as replacement requirement

### LMK 76

luminaire assembly kit LMK 76,  
for subsequent installation in IBTronic XL Drillbox 976 801 01

979 803 01

## Accessories

Recommended accessories:

### FPD 120

Fermacell® plasterboard for retrospective installation in H120 P

979 801 01

### HW LFR-120

HW hole cutter HW LFR-120, will fit any commercial drill chuck,  
diameter 120 mm Ø, cutting depth 40 mm

925 121 01

#### Flexible entry method

- 8 integrated conduit entries for smooth and corrugated conduits (4 x M20, 4 x M25)
- Integrated conduit stopper and strain relief
- Knock-out membrane entries, conduit entries above the prefabricated ceiling

- Universal installation housings for subsequent mounting in prefabricated ceilings
- For installation of LV/HV/LED luminaires and loudspeakers
- Ø 150 mm core hole drilling
- Fermacell® plasterboard with tolerance compensation of max. Ø 100 mm
- For installation of VDE-tested luminaires according to DIN EN 60598 and with  $\nabla$  or  $\nabla\nabla$  marking, luminaire power up to 50 W Cool Beam

## Concrete Installation IBTronic XL Drillbox 150

## IBTronic XL Drillbox 150

255 x 280 x 92 mm

### Description

Order no.

Universal mounting enclosure with additional connection space (e.g. for installing an electronic safety transformer) for pre-cast concrete structures, halogen-free, for installing NV/HV/LED luminaires and loudspeakers, suitable for subsequent installation in prefabricated ceilings 45-70 mm with Ø 150 mm core drilling.

### IBTronic XL Drillbox 150

976 804 01

selectable outlet aperture:

Fermacell® plasterboard, variable up to Ø 100 mm,  
8 combi-conduit entries 4 x M20, 4 x M25,  
integrated conduit stopper for conduits M20, M25

### IBTronic XL Drillbox 150 E

976 804 02

selectable outlet aperture:

Fermacell® plasterboard, variable up to Ø 100 mm,  
8 combi-conduit entries 4 x 16 mm, 4 x 19 mm,  
integrated conduit stopper for pipes 16 mm, 19 mm

#### Cavity wall installation system

- Automatic cable restraint for conduits up to 20 mm Ø or cables NYM up to 5x2.5<sup>2</sup>
- Fast, easy installation thanks to favourable positioning of claws
- No special tools needed
- Patress boxes with integrated combi-bridge for insulated wiring, no extra parts needed
- Combination of different heights possible
- Flush installation standard, no countersink necessary

#### Trunking boxes

- Patented entries with strain relief
- Convenient insertion of the connecting cables from above
- For cables up to 5 x 2.5<sup>2</sup> and data lines
- Universal 1-way or 2-way boxes in various heights
- For switches, sockets (screw spacing 60 mm), CEE 16 A (screw spacing 67 mm)

#### Fast installation

- Snap box into place
- Connect device outside the box
- Insert the device and connecting cable from above and position the box
- Tighten screws - done!

## **HW 040 - Outlet socket**

40 mm

### Description

Cavity wall outlet socket, flame resistant, for lighting outlets acc. to VDE 0100, for plate thicknesses from 1 to 30 mm, screwing distance 27 mm, including white sealing cap

Order no.

IP30

**HW 040**

Drilled hole Ø 35 mm, 40 mm deep

924 040 01

## **HW 035 - Flat box**

35 mm

Cavity wall flat box, flame resistant, special box with small installation depth (35 mm), for thin walls with plate thicknesses from 1 to 20 mm, with moulded patented combi jumpers, device screw spacing 60 mm

IP30

**HW 035**

Drilled hole Ø 68 mm, 35 mm deep

920 035 01

## **HW 035 H**

35 mm

Cavity wall flat box, flame resistant, special box with small installation depth (35 mm), for thin walls with plate thicknesses from 1 to 20 mm, with moulded patented combi jumpers, device screw spacing 60 mm

IP30

**HW 035 H**

Drilled hole Ø 68 mm, 35 mm deep

920 235 01

## **HW 050 - Receptacle**

50 mm

Cavity wall receptacle, flame resistant, universal socket for plate thicknesses from 1 to 40 mm with moulded patented combi jumpers and punching tool, device screw spacing 60 mm

IP30

**HW 050**

drilled hole Ø 68 mm, 50 mm deep

920 050 01

**HW 050 WD**

with closed membrane entries, drilled hole Ø 68 mm, 50 mm deep

920 350 01

**HW 050 H**

50 mm

## Description

## Order no.

Cavity wall receptacle, flame resistant, universal socket for plate thicknesses from 1 to 40 mm with moulded patented combi jumpers and punching tool, device screw spacing 60 mm

IP30

960°C

DKE

halogen-free

**HW 050 H**

drilled hole Ø 68 mm, 50 mm deep

920 250 01

**HW 065 - branch socket box**

65 mm

Cavity wall channel junction box, flame resistant, with enlarged connection space, universal socket for plate thicknesses from 1 to 40 mm, with moulded, patented combi jumpers and punching tool, device screw spacing 60 mm

IP30

DKE

**HW 065**

drilled hole Ø 68 mm, 65 mm deep

920 065 01

**HW 065 WD**

with closed membrane entries, drilled hole Ø 68 mm, 65 mm deep

920 365 01

**HW 065 H**

65 mm

Cavity wall channel junction box, flame resistant, with enlarged connection space, universal socket for plate thicknesses from 1 to 40 mm, with moulded, patented combi jumpers and punching tool, device screw spacing 60 mm

IP30

960°C

DKE

halogen-free

**HW 065 H**

drilled hole Ø 68 mm, 65 mm deep

920 265 01

**HW - Ceiling socket**

50 mm

Cavity wall lighting connection socket, flame resistant, for plate thicknesses from 0.5 to 33 mm, with M5 brass bush to take a ceiling hook from the accessory range, acc. to DIN EN 60670-21, but max. loading on hook 20 N (2 kg)

IP30

**HW DD**

drilled hole Ø 68 mm, 50 mm deep

927 050 01

**HW 070 - channel junction box**

58 mm

## Description

Cavity wall connection socket, flame resistant, for plate thicknesses from 1 to 30 mm, device screw spacing 67 mm

Order no.

IP30

**HW 070**

Drilled hole Ø 74 mm, 58 mm deep

925 070 01

**HW 120 - Connection socket**

65 mm

Cavity wall connection socket, flame resistant, for plate thicknesses from 7 to 35 mm, for terminals up to 4 mm<sup>2</sup>, including white sealing cap

IP30

**HW 120**

Drilled hole Ø 120 mm, 65 mm deep

925 120 01

**HW 050 - Double socket**

50 mm

Cavity wall double socket, flame resistant, for plate thicknesses from 1 to 40 mm, with moulded patented combi jumpers and punching tool, device screw spacing 60 mm

IP30

**HW 050/2**

drilled hole Ø 2 x 68 mm, 50 mm deep, combination spacing 71 mm

923 050 01

**HW 050/2 WD**

with closed membrane entries, drilled hole Ø 2 x 68 mm, 50 mm deep, Combination spacing 71 mm

923 350 01

**HWK - Terminal boxes**

Cavity wall terminal boxes, flame resistant, for plate thicknesses from 7 to 35 mm, including white sealing cap

IP30

**HWK 1**

107 x 107 x 53 mm, with drilling template for 35 mm drilled holes

928 001 01

**HWK 2**

165 x 165 x 72 mm, with drilling template for 68 mm drilled holes

928 002 01

**HWK 3**

235 x 205 x 72 mm, with drilling template for 68 mm drilled holes

928 003 01

**HW - Sealing cap**

Ø 90 mm

## Description

Sealing cap for junction boxes, polystyrene, flame resistant, white

## Order no.

925 101 01

**HW VD-60**

for type HW 035 / HW 050 / HW 065, screw spacing 60 mm

**HW VD-67**

for type HW 070, screw spacing 67 mm

925 100 01

**Cover with ceiling hook**

Ø 90 mm

Sealing cap for cavity wall sockets, polystyrene, flame resistant, white, with isolated metal ceiling hooks M5 x 55 mm and fixing screws

927 100 01

**HW 050 DD-VD**

for ceiling socket HW DD

**DH ceiling hook**

Metal ceiling hook, insulated with M5 thread for ceiling sockets

## Ventilation seal

IP44

With ventilation seal to avoid condensation formation in enclosures, flow rate 100 l/min. at 0.1 bar overpressure, thermoplastic elastomer, grey, recommended for insertion on the left and right enclosure sides in different heights (see Technical Appendix - protection against condensate water)

### f. wall thicknesses/mm Color

BST M20	1,5 - 4,5	Grey	262 420 01
BST M20/sw	1,5 - 4,5	black	262 020 01

## Ventilation element set

IP65

IK08

BEL Air ventilation element set, For preventing condensation build-up in housings, For vertical installation in housing walls and GFL combi flanges with corresponding knock-outs, At least two ventilation elements are required per housing

### BEL Air M40

M40, Set = 2 pcs., Air exchange rate: 30 l / day / set

263 440 01

## Pressure compensation device

IP68

IP66

Pressure compensation device with air-permeable and watertight special membrane foil to reduce condensation formation in enclosures, flow rate 0.8 l/min. at 0.1 bar overpressure, grey polyamide, without lock nut

### DAE M12

M12 x 1.5 mm, Thread length 10 mm

262 412 01

## Combi connector

IP54

Combi connector, for connecting enclosures, thermoplastic, for wall thickness 1.5 - 4.0 mm

### f. wall thicknesses/mm

KST M32	1,5 - 4,0	193 032 01
KST M25-33	1,5 - 4,0	193 026 01
KST M25-17	1,5 - 4,0	193 025 01

**Combi set**

IP66

## Description

Combi set, for side connection of enclosures with metric entries, complete with lock nuts and intermediate wall seal inserts

## f. wall thicknesses/mm Thread lenght/mm

<b>IP66</b>	<b>IP66</b>	<b>Class of protection (IP code) acc.to DIN EN 60529 (VDE 0470-1)</b>
		<b>Maximum number of distribution units</b>
<b>E30- E90</b>	<b>E30- E90</b>	<b>Electrical functional integrity acc.to DIN 4102-12</b> "E" stands for functional integrity, "30-90" stands for the duration in minutes.
<b>FE180</b>	<b>FE180</b>	<b>Insulation integrity</b> according to VDE 0472-814, IEC 60331 "FE" stands for the impact of flames or fire, "180" stands for the time in minutes
<b>F400</b>	<b>F400</b>	<b>Operating duration</b> acc. to DIN EN 12101-3 120 minutes function at 400 °C
		Tested acc. to DIN 4102-2. <b>Functional integrity F90</b> (according to E90) for protecting the electrical installations as per MLAR 2005. Can be individually equipped with type-tested operating materials.
		Tested acc. to DIN 4102-2. <b>Fire load insulation F90</b> (according to E90) for protecting the exit and escape routes as per MLAR 2005.
<b>S90</b>		<b>Fire-resistance class S 90</b> acc. to DIN 4102-9
		<b>Certificate of conformity.</b> Conformity of the construction product with the technical regulations is documented by the "Ü label"
<b>ABZ</b>		<b>The German general building supervisory approval</b> (AbZ) attests the usability of an object under approval in the sense of the building regulations. It is granted by the German Institute of Structural Engineering (DIBt), Berlin, for construction products and types of construction, where no harmonised European standards have yet been applied for them and which are also not regulated by German standards or regulations.
<b>ABP</b>		<b>German general building inspection test certificate</b> (AbP) is granted for unregulated construction products and construction methods whose use is not intended to meet the full safety criteria for structures. The granting is carried out by recognised testing bodies.
<b>10<sup>2</sup></b>	<b>10<sup>2</sup></b>	<b>Nominal cross section</b> The greatest permissible wire cross-section that can be connected acc. to DIN EN 60998 (VDE 0613) and DIN EN 60999 (VDE 0609)
<b>IK09</b>	<b>IK09</b>	<b>Level of protection</b> (IK code) to mechanical impact acc. to DIN EN 50102 (VDE 0470-100)
		<b>Protection class II</b> operating materials with protective insulation to DIN VDE 0100-410
<b>1000V DC</b>		<b>Maximum voltage DC</b> (DC voltage) as per product standard (system voltage in the PV sector)

## Explanation of pictograms

		<b>Nominal AC voltage</b> (AC voltage). Highest permissible voltage on the junction as per product norm
		<b>Rated current</b> (maximum current in continuous operation) as per product norm
		Products for <b>installation in cavity walls or furnishings</b> acc. to DIN VDE 0606-1
		Products for <b>use in concrete construction</b> acc. to DIN VDE 0606-1
 Max. 50W		Suitable for the installation of lamps in which dichroic reflector lamps ( <b>cool beam reflectors</b> ) can be used. Reduces the thermal load in the light bundle.
		Suitable for LED lights
		Suitable for use in concrete. <b>Resistant to momentary temperatures of up to +90 °C</b> during the setting process.
		<b>960°C glowing wire testing</b>
		The <b>VDE symbol</b> stands for the tested safety of the product with regard to electrical, mechanical, thermal and other hazards.
		<b>c UL us</b> (Underwriters Laboratories) <b>approved</b> (US and Canadian approval)
		<b>UL EU</b> New European test certificate for certification recognised across Europe.
		<b>DLG FokusTest</b> for special innovations of machines and technical products - predominantly in agricultural and forestry applications.
		<b>AK Air</b> Ventilation elements to prevent accumulation of condensate while maintaining protection class IP65.
		<b>Vattenfall approval</b>
		<b>Halogen-free enclosure</b> , without halogens such as fluorine, chlorine and bromine.
		<b>Industrial quality</b>

### Industrial quality

**Industrial quality** stands for products designed for special requirements and use in demanding environments. Such categories include installations in wet rooms and outdoors as well as on combustible surfaces or in locations that are subject to fire hazards. Enclosures used in such environments must all have one thing in common: **Resilience, safety, ruggedness and longevity**.

Products with this symbol indicate at a glance boxes and enclosures for applications with particularly stringent requirements with respect to material that has been tested as flame resistant and self-extinguishing in accordance with VDE 0471/EN60695/UL94 and consequently offers added security. The Abox-i\*, Abox-i SL, AK\*, AKi, GTi, TK-PC, TG-PC, WKE and ZKi series, made from high-quality technical plastics, satisfy the strictest material requirements.

\* Abox-i 060 or higher

\* AK 14 or higher

#### Common features of all products featuring the IQ symbol:

- Operating temperature from -35°C to 80°C
- Resistant to petrol, petroleum, fats, diesel fuel, turpentine and, to a limited extent, acids and alcohol
- Protection rating up to IP68
- UV- and weather-resistant
- Flame-resistant and self-extinguishing 960°C as per VDE 0471 / EN 60695 / UL94
- Impact-resistant and shatterproof under mechanical stress up to IK09
- Free of halogens, heavy metals, PVC and silicone

**Definition of terms**  
as per DIN VDE 0660-600-1  
(see DIN VDE 0100-200)

<b>Rated voltage <math>U_n</math></b>	The manufacturer's specified maximum nominal AC voltage (effective value) or DC voltage for which the main circuits of the switchgear assembly are designed.
<b>Rated operating voltage <math>U_e</math></b>	The manufacturer's specified voltage value which, combined with the rated current, determines the usage.
<b>Rated insulation voltage <math>U_i</math></b>	Withstand voltage (effective value), which is specified by the manufacturer for a device or a part thereof and which specifies the defined (long-term) endurance of its associated insulation.
<b>Rated surge voltage <math>U_{imp}</math></b>	The value of an impulse voltage specified by the manufacturer, which specifies the defined endurance of the insulation with respect to transient overvoltages.
<b>Rated current <math>I_n</math></b>	The manufacturer's stated current value, which takes into account the ratings of the equipment and their location and use and which can be fulfilled without exceeding the specified temperature limits of the various parts of the switchgear assembly under specified conditions.
<b>Short-circuit current <math>I_c</math></b>	Overshoot that occurs in the case of a short circuit due to an error or an incorrect connection in an electrical circuit.
<b>Prospective short-circuit current <math>I_{cp}</math></b>	Current that flows in a circuit due to a short circuit caused by a conductor of negligible impedance in the immediate vicinity of the terminals of the switchgear assembly.
<b>Rated surge current resistance <math>I_{pk}</math></b>	The largest instantaneous value of the short-circuit current specified by the manufacturer, which will be sustained under the specified conditions.
<b>Rated short-term current resistance <math>I_{cw}</math></b>	The effective value of the short-time current specified by the manufacturer, indicated as current and time, which can be fulfilled under specified conditions without damage.
<b>Rated conditional short-circuit current <math>I_{cc}</math></b>	The value of the prospective short-circuit current specified by the manufacturer, which can be withstood by a circuit protected by a short-circuit protection device (SCPD <sup>1</sup> ) during the total break time (duration of current flow) of the device under specified conditions.
<b>Rated current <math>I_n</math></b>	The manufacturer's stated current value, which takes into account the ratings of the equipment and their location and use and which can be fulfilled without exceeding the specified temperature limits of the various parts of the switchgear assembly under specified conditions.
<b>Rated load factor RDF<sup>2)</sup></b>	The manufacturer's specified percentage of the rated current, with which the outflow of a switchgear assembly can be loaded continuously and simultaneously taking into account the mutual thermal influences.

<sup>1)</sup> SCPD= Short Circuit Protection Device

<sup>2)</sup> RDF= Rated Diversity Factor

## Overview of the ambient temperatures and mechanical properties of els products

### Additional note:

The specified temperatures may be limited by the installed devices.

<sup>1)</sup> For use with suitable connectors or cable glands

<sup>2)</sup> With closed socket covers

<sup>3)</sup> V-2 material has passed the flame test of UL 746C (see note on page 329).

## Overview of the properties of materials used in the els installation systems

The materials used by Spelsberg were subjected to a weathering test according to DIN 53 387 (replaced by DIN EN ISO 4892-2), a 1000 hour test at the „State Examination Office“ in Dortmund. The materials used in the IQ products demonstrate optimum results here. The material also passed a test for UV resistance according to UL 746 C, without any limitations.

O = resistant Ø = partially resistant X = not resistant

\* Material (TK-PC, TG-PC) has passed the flame test of UL 94 / UL 746C (see note on page 329)

When selecting the installation location, the climatic conditions and the occurrence of chemical influences should generally be examined in addition to the protection rating. Details of material properties and chemical resistance of the materials used can be referenced in the tables, though these are simply guide values.

## Power loss details for AK distribution boards

The AK distribution board can be used both as a GP (universal) housing and as a PD housing for pre-defined equipment installations per standard EN 60670-24.

Table 3

Type	Max. power output characteristics (Pde) for <b>GP housings</b> per EN 60670-24 [for each profile rail] <sup>1)</sup>	Achievable power loss in <b>PD housings</b> per EN 60670-24 [for each profile rail] <sup>2)</sup>
AK 14 / AK-F 14	26W[26W]	35W[35W]
AK 28 / AK-F 28	35W[17,5W]	48W[24W]
AK 42 / AK-F 42	45W[15W]	62W[20W]
AK 56 / AK-F 56	56W[14W]	77W[19W]
AK 70	66W[13W]	90W[18W]

Type	Max. power output characteristics (Pde) for <b>GP housings</b> per EN 60670-24 [for each profile rail] <sup>1)</sup>	Achievable power loss in <b>PD housings</b> per EN 60670-24 [for each profile rail] <sup>2)</sup>
AK 14 Plus / AK-F 14 Plus	52W [52W]	70W[70W]
AK 28 Plus / AK-F 28 Plus	61W[30,5W]	92W[46W]
AK 42 Plus / AK-F 42 Plus	70W[23W]	113W[36,5W]
AK 56 Plus / AK-F 56 Plus	79W[19,5W]	134W[33,5W]

1) Verification of the maximum power output characteristics ( $P_{de}$ ) for universal housings - GP housings

The verification of the heating for GP empty housings and GP basic housings was carried out with AK distribution boards with substitute resistors, which created the maximum power loss for each standard rail as listed in the table. In doing so the outer surface does not heat up by more than 30K. Here, the temperature rise inside the housing is higher and may exceed the permissible operating temperature of the operating equipment used.

2) Verification of the heating of the housing for pre-defined equipment installations - PD housings

The verification of the heating for PD empty housings and PD basic housings was carried out with AK distribution boards with a combination of operating equipment, which created the maximum power losses for each standard rail as listed in the table. In doing so the outer surface does not heat up by more than 40K. Here, the temperature rise inside the housing is higher and may exceed the permissible operating temperature of the operating equipment used.

## Power loss information for AK/AKi installation distribution boards and individually mounted AK/AKi/GTi empty enclosures

Permissible power loss Pper in Watts per DIN VDE 0660-507 for **individually mounted, surface-mounted installation distribution boards** and **surface-mounted empty enclosures** with stipulated  $\Delta T$ . Power loss at 50% housing height and [75%] housing height.

## Technical Appendix

## Power loss of the els product installations

Guide values for stipulated power loss for operating equipment in the GTi and AKi products (per device), pos. **without** fuse elements. The exact data can be found in the product data for the individual products at [www.spelsberg.com](http://www.spelsberg.com)

Table 8

Component / device	Size	Rated current	Power loss at rated current
Fuse base	NH 00	160 A	12 W
	NH 1	250 A	32 W
	NH 2	400 A	45 W
Tab fuse base	NH 00	160 A	12 W
	NH 1	250 A	32 W
	NH 2	400 A	45 W
Fuse load disconnector	NH 00	160 A	9 W
	NH 1	250 A	16 W
	NH 2	400 A	22 W
Tab fuse load disconnector	NH 00	160 A	14 W
	NH 1	250 A	22 W
Tab screw fuse base	D02	63 A	5,5 W
	DII	25 A	4 W
	DIII	63 A	7 W
Circuit breaker		160 A	45 W
		250 A	53,4 W
		400 A	58,5 W
		630 A	123 W
Load circuit breaker		63 A	2,3 W
		80 A	1,8 W
		100 A	1,8 W
		160 A	9 W
		250 A	17,4 W
		400 A	32,4 W
		630 A	93 W

## Loading factor for switchgear combinations

### Example calculation:

9 NH 00 fuses with a power loss of 9 W per device.

The loading factor per EN 61439-2, table 101 is 0.7.

$$\begin{aligned} P_{\text{vred.}} &= P_v \cdot \text{Rated load factor}^2 \\ &= 9 \text{ W} \cdot 0,7 \cdot 0,7 = \underline{\underline{4,41 \text{ W}}} \text{ (per fuse)} \end{aligned}$$

Because 9 fuses are installed this gives:

$$\begin{aligned} P_{\text{vges}} &= 4,41 \text{ W} \cdot 9 \\ &= \underline{\underline{36,69 \text{ W}}} \end{aligned}$$

### DIN EN 61439-2, 5.4

If there is no agreement between the manufacturer of the switchgear combination and the user with regard to the actual load currents, the assumed loading of the output circuits or a group of output circuits of the switchgear combination shall be based on the values in the following table.

Type of loading	Assumed loading factor
2 and 3 circuits	0.9
4 and 5 circuits	0.8
6 and 9 circuits	0.7
10 or more circuits	0.6

## 1. Mounting of junction boxes on wood and other combustible materials

According to the **VdS Directive 2023**, electrical connections and conductor connections may only be installed, in the case of mounting on flammable supports, with clamps in suitable electrical installation enclosures and boxes, as outlined by **DIN VDE 0606** and **DIN EN 60670**. This is because the enclosures are closed towards the mounting surface and also because of the strict safety requirements of the standard with respect to fire resistance.

### Examples:

Entire wooden buildings, buildings with wooden construction elements, wooden construction materials or other flammable materials, cavity walls constructed from flammable materials, but also synthetic heat- and sound-insulation materials.

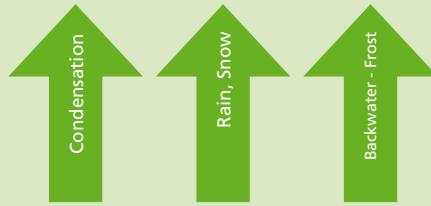

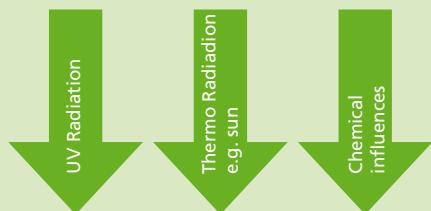

All els installation system products meet these requirements.

## 2. Halogen-free installation materials

Because of the reduction in toxic materials released in the case of fire, **DIN VDE 0100-718** provides for some deviations (simplifications) from the prescribed installation methods, however, with respect to the use of halogen-free conductors. These deviations are of a highly specialised nature and are therefore not described in detail here. However, the Building Regulations of the various Federal States and other regulations for installations in public areas (rescue routes, lifts) increasingly require the use of halogen-free installation systems. In such situations, the use of high-grade, halogen-free materials is definitely advisable. The reason for this is the improved level of protection of people and materials in the case of fire, since halogen-free materials produce less smoke in the case of fire, the proportion of toxic combustion gases is reduced to a minimum and no corrosive gases are released, which can react with extinguishing agents to form hydrochloric acid. Material damage to buildings and their contents is thereby reduced.

**Spelsberg offers completely halogen-free els installation systems for these areas (except HW, KD)**

There are many influencing factors for outdoor installations!

## 3. Outdoor installation – Damp and wet areas and rooms

### 3.1 Basics

In general when selecting components, the manufacturer's instructions as to the product properties simply act as a guide for the user. These properties should always be viewed in the context of the relevant installation requirements such as the installation regulations according to DIN VDE 0100-ff.

**Depending on the local circumstances, additional protective measures may have to be fulfilled by the user.** The individual factors are described in greater detail below.

### 3.2 Protection against UV radiation

UV radiation can cause severe structural damage or even destruction in a wide variety of plastics. Products made from the material polystyrene (PS) must therefore not be used outdoors. Spelsberg developed the iQ series products for this scenario. A material is used for these products that has a high resistance to UV radiation. In a weathering test according to DIN 53 387 (replaced by DIN EN ISO 4892-2), this material produced optimum results in a 1000-hour test. This material also passed a weathering test according to UL 746 C, without any limitations.

### 3.3 Protection against high temperatures

Installed electrical appliances generate power loss during operation. The enclosures manufactured by **Spelsberg** are tested during the approval test for the maximum power loss in the enclosure. Detailed tables on this topic are provided in the catalogue, taking account of the ambient temperature and the installation type.

Switchgear assemblies are designed for ambient temperatures of between -25°C and +35°C (24-hour average). A temporary increase in temperature to 40°C is not a problem.

Even if, for example, iQ products from Spelsberg are suitable for temperatures of between -40°C and +80°C, the manufacturer's instructions and the requirements of the relevant product safety standards must be checked for installed devices such as line protection, fault-current circuit breakers or fuses when designing the housing.

**Solar radiation or other heat sources can cause additional increases in the internal temperature which are not permitted and must therefore be avoided.** Reliable operation of electrical equipment no longer be guaranteed under certain circumstances.

#### DIN VDE 0100-520 (VDE 0100-520):

522.1.2 Cable and conductor systems including accessories may only be installed or moved under ambient temperatures which are within the limit values specified by the manufacturer or in the relevant product standard.

### 3.4 Protection against chemical influences

For installations in areas with increased levels of hazardous substances in the environment, the suitability may be correspondingly reduced. Information is available in the table „Material characteristics“.

iQ products are resistant to mineral oil, vegetable fats and animal fats.

## 3.5 Protection against condensation

The more tightly sealed the equipment, for example junction boxes or distributor housings, the greater the likelihood of condensation forming. This is especially the case at locations where highly fluctuating temperatures are to be expected. These effects are intensified by the power loss generated in the enclosures.

Owing to the differences in temperature, a difference also arises in the pressure conditions, which causes the enclosure to draw in air when the temperature changes. The next time the temperature increases, the humidity in this air condenses on the cold surface of the housing, for example on the lid. This process is only reversible to a limited extent, so the water collects in the housing. Since this effect occurs regularly, even daily to an extent, a considerable volume of water may collect internally. If this housing has an increased protection rating, it no longer discharges this water with the result that its seal actually has a negative impact. Damage will result.

Under **DIN VDE 0100-520**, precautions must be taken with respect to drainage of water if water collects or condensation can occur within cable and conductor systems.

Spelsberg junction boxes in the various product groups have break-out condensation openings on the rear housing or mounting surfaces. These should be opened in such a way that when installed they are on the underside of the housing so that any condensation can drain off.

This only applies under the condition that no increased demands are imposed with respect to protection against accidental contact or foreign bodies (> IP2X or dust protection).

If requirements for contact protection or foreign body protection are also imposed on the housing, for example IP3X, we recommend use of els ventilation seals. These seals come in the size M20, are fitted in the corresponding cable inlet openings on the underside and the side surfaces and offer splash water protection up to IPX4 when properly installed. We recommend an installation that offers a so-called chimney effect.

## AK Air and BEL Air ventilation elements

The Air ventilation elements prevent condensation, whilst maintaining the high IP65 protection rating. Any condensate occurring is transported out of the enclosure immediately via air exchange. The continuous and high rate of air exchange allows the interior air to mix constantly with the environmental air and transports the moisture outwards. Air exchange also takes place in environments with almost constant air humidity and temperature, as the air in the interior of the housing heats up, e.g. due to the components.

**Recommendation:** At least one complete air exchange is provided per day via the BEL Air. With one set, this is achieved with a housing volume of up to 35 dm<sup>3</sup>.

All housing parts, such as the seals, are permanently relieved of pressure through the constant pressure equalisation. The high air exchange rate guarantees a permanent exchange of the moist air with the surroundings. No appreciable pressure differences are required for this. However, with the pressure equalisation elements it is exactly these appreciable pressure differences that are required, at least temporarily, in order to implement an air exchange. The Air ventilation elements therefore have a very large, open filter surface that guarantees a high air exchange without influencing the air flow. The constant pressure equalisation prevents pressure differences thus ensuring that no mechanical forces can be exerted on the housing and seals.

## DIN EN 61439-1

Section 8.2.2 concerns the protection against contact with live parts and the prevention of penetration of solid foreign objects and water. In addition, closed switchgear assemblies must be protected from condensate inside the housing without changing the type of protection.

## Installation only in protected outdoor areas!

Please note that in the case of installations under solar fields, the joints between modules must not be above the housings, or the housings must also be covered by a protective shelter.

### 3.6 Protection against rain / snow (precipitation)

The protection rating tests carried out under DIN EN 60529 are used as comparative tests and for classification of properties. The tests are limited to a **few minutes** and cannot emulate exposure to rain / snow or cleaning with water jets. In addition, the local conditions may differ so greatly that a general exposure test cannot be defined. The installation regulations for the respective installation situation must be taken into account for this reason.

#### DIN VDE 0100-520:

522.3.1 Cable and conductor systems must be selected and installed such that damage cannot be caused by condensation or ingress of water.

#### DIN VDE 0100-712: Photovoltaic systems

712.522.8.3 External influences that can be anticipated, such as wind, ice formation, temperatures and solar radiation, must be taken into account.

### 3.7 Protection against retained water (frost)

Water frequently collects on surfaces and in recesses in installations that are not protected against precipitation. If this collected water cannot drain off unhindered, it will accumulate. In the event of low temperatures, this water can freeze and cause unpermitted mechanical strains on the housing. This can cause damage to the housing.

#### DIN VDE 0100-712:

712.522.8.3 External influences that can be anticipated, such as wind, ice formation, temperatures and solar radiation, must be taken into account. It should therefore be ensured during installation that the housing is protected by a roof construction. (See 3.6)

This roof construction may

- already be present in existing structures
- be set up by the user
- be supplied in the form of accessory products from the Spelsberg range.

### 3.8 Protection against plants and/or mould growth

The plastics used in electrical installation are organic materials. The risk of harm from plants, algae or mould must therefore be considered.

#### DIN VDE 0100-520:

522.9.1 If experience or empirical evidence shows that plants and / or mould growth can cause damage, the cable and conductor system must be selected accordingly or special protection measures must be provided.

**Comment: A laying method that allows corresponding removal of such vegetation must be selected (see Section 529).**

#### Conclusion:

Taking account of the aforementioned parameters, a protected installation is absolutely mandatory for outdoor use and is also described extensively in the installation standards.

This is the only way to ensure safe operation of the protective devices.

#### Supplementary information on outdoor installation – UV-resistance:

The information on the type of protection and UV-resistance is often considered the only characteristics for outdoor installations. However, other factors such as absolute temperature, frequency of temperature change, humidity and chemical influences in particular play an important role with outdoor installations. In addition to impairments through UV-effects, in outdoor installations damage is expected to arise predominantly as a result of chemical influences. So, the outside areas in the vicinity of filling stations, chemical facilities, landfill sites, compressors, sewerage treatment plants etc. should be subjected to particularly critical investigations beforehand.

## 4. Installing cables in concrete

The commonly-used NYM sheathed cables may be installed in concrete, with the exception of concrete which is stamped or vibrated during pouring. According to **VDE 0276**, high-voltage NYY cables may, however, be used without restriction in concrete. However, in comparison with NYM, a considerably larger minimum bending radius must be complied with.

According to DIN EN 61140 (VDE 0140-1) equipment is classified into protection classes according to its construction.

### Protection class I

(only symbolises the earthing, protection class I itself does not have a symbol)

### Protection class II

### Protection class III

## 5. Protection classes of electrical equipment

This classification is not for the purpose of describing the safety level of the equipment but is simply a statement of the measures with which this safety level can be achieved.

**Protection Class I** equipment is that in which protection against electric shock is not just provided by the basic insulation. Additional protection is provided by the fact that parts are connected to the earth lead of the fixed installation so that in case of failure of the basic insulation no voltage can remain.

**Protection Class II** equipment is that in which protection against electric shock is not just provided by the basic insulation but also by additional safety measures, such as double insulation or reinforced insulation. There is no possibility of connecting an earth lead.

**Protection Class III** equipment is that in which protection against electric shock is based on a protective low voltage (SELV<sup>1)</sup>) and in which voltages that are higher than the protective low voltage cannot be produced.

All „els“ empty enclosures made from plastic comply with Class II protection requirements. Metal housings, or metal-coated housings are intended for connection of an earth lead and comply with Class I protection requirements.

<sup>1)</sup> SELV = (Safety Extra Low Voltage)

Test probe according to DIN 60529

## Spelsberg-products with NEMA protection class

Els-products	Nema

TK PC-m	4X, 12K
TG PC-o	12*

\*on request TG PC-o in Nema 4X, 12 design

## 6. Protection types according to EN 60529 (VDE 0470-1)

The appropriate degree of protection is demonstrated in our in-house test laboratory. The tests are performed according to DIN EN 60670-1, DIN EN 61439-1 and DIN EN 62208 (depending on type).

The first digit of the IP Code stands for the level of protection against contact with dangerous parts and the ingress of solid bodies.

	IP	Protection level	Definition
	0x	No contact protection, no protection against solid foreign bodies	
	1x	Protection against large area contact (with the hand), protection against foreign bodies > 50 mm Ø	The object probe, a sphere 50 mm in diameter, must not fully penetrate
	2x	Protection against contact with the fingers, protection against foreign bodies >12 mm Ø	The object probe, a sphere 12.5 mm in diameter, must not fully penetrate
	3x	Protection against contact with tools, wires etc. >2.5 mm Ø, protection against foreign bodies >2.5 mm Ø	The object probe, a sphere 2.5 mm in diameter, must not penetrate at all
	4x	Protection against contact with tools, wires etc. >1 mm Ø, protection against foreign bodies >1 mm Ø	The object probe, a sphere 1.0 mm in diameter, must not penetrate at all
	5x	Contact protection, protection against dust deposits on the inside	The ingress of dust is not totally prevented, but dust must not penetrate in a quantity to interfere with satisfactory operation of the devices
	6x	Full contact protection, protection against ingress of dust	No penetration of dust

## Comparison table between IP code and NEMA types

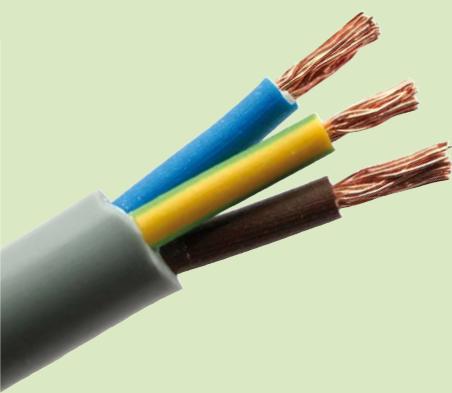

IEC 60529	Nema 250												IEC 60529

Interpretationrule

**The second digit of the IP code stands for the level of protection against the harmful ingress of water.**

	IP	Protection level	Definition
	x0	no protection	
	x1	Protection against vertically falling dripping water	Vertically falling drops shall have no harmful effects
	x2	Protection against vertically falling water drops when the enclosure is tilted up to 15°	Vertically falling drops must not have any harmful effects when the enclosure is tilted up to 15° on either side of the vertical
	x3	Protection against falling spray water if angled up to 60° from the vertical	Water sprayed at an angle of up to 60° on either side of the vertical shall have no harmful effects
	x4	Protection against splash water from all directions	Water splashed on the enclosure from any direction shall have no harmful effects
	x5	Protection against jet water from all directions	Water directed at the enclosure from any direction in a jet shall have no harmful effects
	x6	Protection against heavy jet water	Water directed at the enclosure from every direction in a powerful jet shall have no harmful effects
	x7	Protection against temporary immersion in water	Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is temporarily immersed in water
	x8	Protection against effects of long-term immersion in water	Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is continuously immersed in water
	x9	Protection against heavy jet water (high pressure) with high temperature	Water directed at the enclosure from every direction in a powerful jet shall have no harmful effects

**7. Protection against mechanical stress, IK code**

According to DIN EN 50102 (VDE 0470-100) «Protection types from enclosures for electrical operating media (equipment) against external mechanical damage (IK code)», the degree of protection provided by an enclosure against mechanical damage is indicated by an IK code. The IK codes allocated to the individual stress energy values are given in the adjacent table. The data on the IK values of the individual products is given in Table 1 (page 304).

IK-Code	stress energy [J]
IK00	---
IK01	0,15
IK02	0,2
IK03	0,35
IK04	0,5
IK05	0,7

## 9. PE/N disconnect terminals

DIN VDE 0100-718 requires that junction boxes of the power supply are constructed such that a simple measurement of the insulation resistance of all conductors to earth is possible for each individual circuit leaving the box. For circuits with a conductor cross section less than 10 mm<sup>2</sup>, this measurement must be possible without disconnecting the neutral conductor, for example by installing neutral-lead disconnect terminals. For this reason an expanded terminal compartment is provided with sufficient space for installing standard terminal blocks.

### Additional information for outdoor installations, UV resistance:

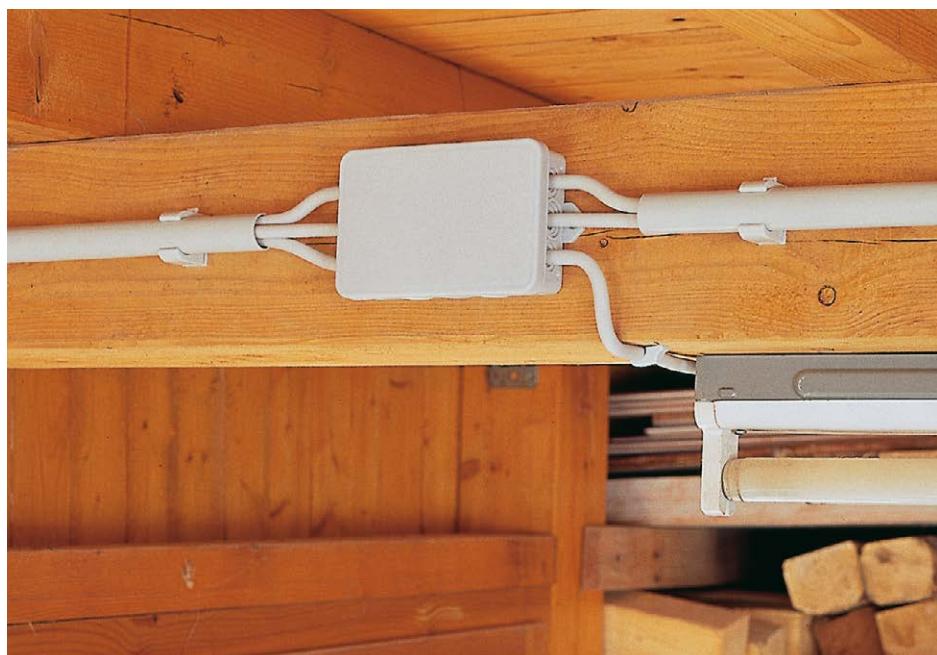

Statements regarding the protection rating and UV resistance are often seen as the only criteria for outdoor installation. However, other factors such as temperature, frequency of temperature change, air humidity and particularly chemical influences also play a significant role for outdoor installations. In addition to the effects of UV, chemical influences can be expected to be the main source of damage for outdoor installations. From the outset, outdoor areas of filling stations, chemical works, waste disposal sites, compressors, sewage works etc, should be examined particularly carefully.

### Protection against direct contact (basic protection) under standard conditions according to DIN VDE 0100-410

#### Important protection requirements:

- Live parts (AC voltages higher than 50 V and DC voltages higher than 120 V) must be enclosed or mounted behind covers which at least conform to protection rating IP2X.
- Horizontal upper surfaces of covers or enclosures that are easily accessible must at least conform to protection rating IP4X.
- Covers and enclosures must be securely fixed and have sufficient strength and durability to maintain the required protection class and sufficient distance from the live components under the conditions and external influences to be expected under normal operation. The covers must only be able to be removed using tools.

All „els“ products satisfy these requirements

**Example:** Living rooms, hotel rooms, attics, heated and ventilated cellars

## Overview of the installation areas

### Rooms with bath or shower per DIN VDE 0100-701

#### Important protection requirements:

- The following switchgear, controllers and installation devices are permitted in these areas:

- Area 0** - None.
- Area 1**
  - Junction boxes and terminal boxes for the supply of electrical consumers that are permitted in zones 0 and 1 per 701.55.
  - Installation devices, including sockets for power circuits that are protected through low voltage by means of SELV<sup>1</sup> or PELV<sup>2</sup> with a nominal voltage that does not exceed 25 VAC or 60 VDC. The current source must be installed outside area 0 or 1.
- Area 2**
  - Installation devices, with the exception of sockets.
  - Installation devices, including sockets for power circuits that are protected through low voltage by means of SELV<sup>1</sup> or PELV<sup>2</sup>. The current source must be installed outside area 0 or 1.
  - Shaver points per DIN EN 61558-2-5 (VDE 0570-2-5).
  - Installation devices, including sockets for signalling and communications equipment assuming that such equipment is protected through low voltage by means of SELV<sup>1</sup> or PELV<sup>2</sup>.

- Electrical equipment must have the following type of protection as a minimum:

In area 0: IPX7

In area 1: IPX4

In area 2: IPX4

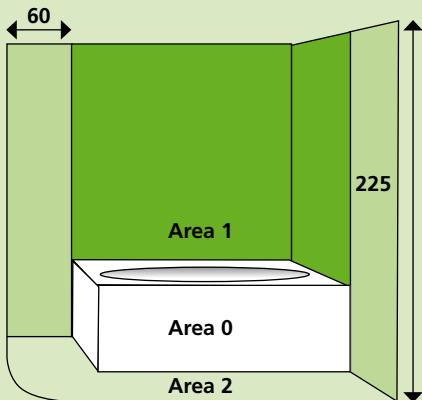

The requirements do not apply to shaver points per DIN EN 61558-2-5 (VDE 0570-2-5), that are installed in area 2 and that are unlikely to be hit by direct spray whilst showering.

Electrical equipment that is exposed to water jets, e.g. for cleaning purposes in public baths, must comply with protection type IPX5 as a minimum when installed in areas 1 and 2.

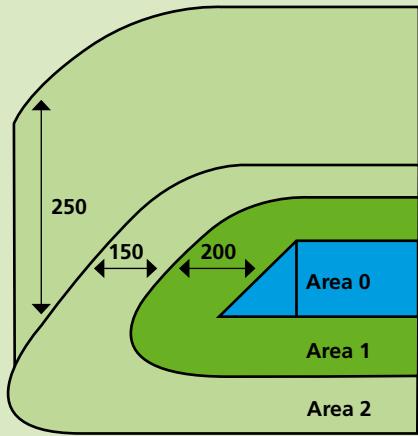

Particularly suitable: Abox-i, AK, AKi and GTi housing systems.

<sup>1)</sup> SELV = Safety Extra Low Voltage

<sup>2)</sup> PELV = Protective Extra Low Voltage

## Overview of the installation areas

### Swimming pool basins and other basins according to DIN VDE 0100-702

#### Important protection requirements:

- When using SELV<sup>1</sup>, protection from direct contact must be ensured, regardless of the voltage level, though:
  - Coverings or enclosures of protection type IP2X or IPXXB (protected against access by fingers) as a minimum, or
  - Insulation that can withstand a test voltage of 500 VAC for a minimum of one minute.
- Electrical equipment must comply with the following types of protection as a minimum:

Area	Outdoors, for cleaning work with water jet	Outdoors, without water jet	Indoors, for cleaning work with water jet	Indoors, without water jet
0	IPX5/IPX8	IPX8	IPX5/IPX8	IPX8
1	IPX5	IPX4	IPX5	IPX4
2	IPX5	IPX4	IPX5	IPX2

- It is not permitted to install junction boxes in area 0.  
In area 1, only junction boxes for electrical circuits with protection through low voltage by means of SELV<sup>1</sup> are permitted.

#### Particularly suitable:

Abox-i, the STV range as well as the AK, AKi, GTi, TK-PC and TG-PC housing systems.

<sup>1)</sup> SELV = Safety Extra Low Voltage

#### Example:

Stables, henhouses, pig-fattening units, incubation rooms and hatcheries, rooms for fodder preparation, hay-lofts, storage areas for straw, fertilizer and cereals

#### Note:

For installations in areas with increased levels of air contamination, the suitability may be correspondingly limited. Information is available in Table 2 (Page 305)

### Agricultural and horticultural estates according to DIN VDE 0100-705

#### Important protection requirements:

The following shut-off equipment should be provided in circuits, regardless of which systems, depending on the type of earth connection:

- In end circuits with sockets, a fault-current circuit breaker (RCD1) with a trip current = 30 mA
- In all other circuits, excluding those that supply distributors, fault-current circuit breakers (RCD1) with a trip current = 300 mA.

Fault-current circuit breakers (RCD<sup>2</sup>) with a trip current = 300 mA must be set up for fire protection. The fault-current circuit breakers (RCD<sup>2</sup>) must disconnect all live conductors. In cases where improved maintenance of supply is required, these fault-current circuit breakers (RCD<sup>2</sup>) must comply with design type S or disconnect with a time delay.

In areas where there is a risk of fire, conductors for low-voltage circuits must either be supplied with covers or sheathing with protection rating IPXXD or IP4X or be supplied with sheathing made from insulating material in addition to their basic protection insulation.

Particularly suitable: STV, Abox, Abox-i, the AK, AKi, GTi, TK-PC and TG-PC housing system.

<sup>2)</sup> RCD = Residual Current Device

## Overview of the installation areas

### Examples:

Commercial kitchens, unheated and unventilated cellar, laundry rooms, cold rooms, a wine cellar, greenhouses, laundry

### Examples of unprotected outdoor installations:

Streets, paths and plazas, courtyards, passages and gardens, on construction sites, railway platforms, ramps and roofs, on cranes, construction machinery, filling stations and walls of buildings and external walls.

### Examples of protected outdoor installations:

Systems in covered railway platforms, in entrance gates and covered filling stations, on houses with sufficient roof projection, with additional weather protection

## Damp and wet areas and rooms and systems installed outdoors per DIN VDE 0100-737.

### Important protection requirements:

- In damp and wet areas and rooms, the electrical equipment must be protected from dripping water (protection type IPX1) as a minimum.
- In areas and rooms where water will be jetted and where electrical equipment will not normally be directly jetted for cleaning purposes, the equipment must be protected from splashed water (protection type IPX4) as a minimum.
- In areas and rooms where water will be jetted, electrical equipment that is directly exposed to the water stream must have a type of water protection appropriate to the type of water jet exposure or must have an additional protective measure that does not impair the operation of the equipment protected by it.

**Note:** The scope of protection afforded by protection type IPX5 does not permit the cleaning of the equipment with pressurised water, e.g. spraying with a water hose or with high pressure cleaners.

- Metal parts exposed to corrosive vapours or mists must be protected against corrosion, e.g. through protective coatings or by using corrosion-proof materials.

## Systems installed outdoors

### Important protection requirements:

- In protected outdoor systems, the equipment must be protected from dripping water (protection type IPX1) as a minimum.
- In unprotected outdoor systems, the equipment must be protected from sprayed water (protection type IPX3) as a minimum.
- The requirements for protection through automatic shutoff of the power supply for
  - sockets in outdoor installations and
  - sockets intended for the occasional supply of outdoor portable equipment, are contained in DIN VDE 0100-470 (VDE 0100 part 470):1996-02, section 471.2.3.

### Particularly suitable:

Abox-i, AK, AKi, GTi, STV/STG, TG-PC and TK-PC

In unprotected outdoor areas: Abox XT

See chapter 3 (page 315 ff.) for information on outdoor installations.

In addition, ventilation and/or drainage is essential!

## Overview of the installation areas

### Electrical systems on caravan pitches, camping pitches and similar areas per DIN VDE 0100-708

#### Important protection requirements:

- The use of equipment with protection class 0 is not permitted.
- Equipment on a caravan pitch must have a protection type of IPX4 as a minimum in order to protect it from splashed water.  
**Note:** If the electrical equipment will be sprayed during the washing process with high pressure cleaners etc., protection type IPX5 must be selected for the equipment itself or the use of an additional protective housing should be considered.
- Equipment that will be erected on a caravan/tent pitch must have or be provided with a protection type of IP4X as a minimum in order to protect it from penetration of very small objects.
- Equipment that will be erected on a caravan pitch must be protected against mechanical stresses.

The protection is achieved through one or more of the following measures:

- The position or location of the equipment must be selected such that damage due to any reasonably foreseeable event is avoided
- Provision of local or general mechanical protection
- Electrical equipment must be erected in compliance with a minimum protection against external mechanical stresses per IK07

**Particularly suitable:** Red range, Abox, Abox-i, RK, RKA, AK, AKi, GTi and the STV range.

### Electrical systems for caravans and motorhomes per DIN VDE 0100-721

#### Important protection requirements:

- The nominal AC power supply for the caravan system must not exceed 230 V in the case of single-phase power or 400 V in the case of 3-phase power. The nominal DC power supply for the caravan system must not exceed 48V.
- Where accessories are sited in a position where moisture may be present, the accessory must be constructed or enclosed such that a protection class of no less than IP44 is achieved.

### Electrical systems for water sport vehicles or houseboats, marinas and similar areas per DIN VDE0100-709

#### Important protection requirements:

- In marinas, equipment erected at or above a landing stage, launching point, pier or pontoon must be selected in accordance with the external influences that may occur, as follows:
  - Splashed water (AD4): IPX4
  - Water jet (AD5): IPX5
  - Waves (AD6): IPX6

- Equipment that will be erected at or above a landing stage, launching point, pier or pontoon must be selected with a protection class of at least IP4X in order to prevent penetration by very small foreign objects (AE3).
- Equipment that will be erected at or above a landing stage, launching point, pier or pontoon must be suitable for exposure to corrosive atmospheres or contaminated substances (AF2,<sub>1</sub>). AF3, should be used if exposure to hydrocarbons is possible.
- Equipment that will be erected at or above a landing stage, launching point, pier or pontoon must be protected against mechanical stresses.(medium mechanical stresses AG2). The protection must be achieved through one or more of the following requirements:
  - The position or location of the equipment must be selected such that damage due to any reasonably foreseeable event is avoided
  - Provision of local or general mechanical protection
  - Equipment erected in compliance with a minimum protection against external mechanical stresses per IK07

**Particularly suitable after the feed point: Abox, Abox-i, Abox XT, AK, AKi, GTi, TK-PC, TG-PC, STV, and the STG series.**

<sup>1)</sup> Abbreviation for the classification of external influences per DIN VDE 0100-510, table ZA.1

### Primarily electrical systems erected, for example at fairgrounds, amusement parks and circuses per DIN VDE 0100-740

#### Important protection requirements:

- The nominal supply voltage shall not exceed 230/400 VAC or 440 VDC.
- Regardless of the number of current sources for power supply, outer conductors and neutral conductors for the various current sources shall not be connected to one another after the feed point. The instructions from the DSO<sup>2</sup> shall be complied with.
- All final circuits for lights, sockets up to 32 A rated current and portable equipment that is connected via flexible cable or wiring with a current load capacity up to 32 A, must be additionally protected with residual current devices (RCD<sup>3</sup>) with a rated fault current = 30 mA.
- Each separated electrical system and each distribution circuit that supplies an outdoor system, must be equipped with its own, easily accessible and correctly identifiable disconnection device.
- Switchgear and controllers shall only be installed in boxes that can be opened exclusively with keys or tools. Exceptions to this are parts that are intended to be operated by electrical lay-persons.
- Electrical equipment must comply with protection type IP44 as a minimum.
- Each electrical system must have its own easily-accessible device for disconnection and switching and to provide over-current protection.
- Housings that contain rectifiers and transformers must be reasonably ventilated and the openings must not be covered during operation.

**Particularly suitable: Red range, Abox, Abox-i, RK, RKA, AK, AKi, GTi and the STV range.**

<sup>2)</sup> DSO = Distribution System Operator

<sup>3)</sup> RCD = Residual Current Device

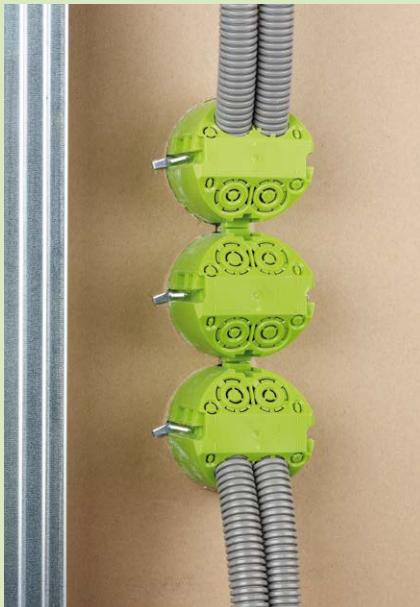

## Overview of the installation areas

### Electrical systems in furniture and similar furnishings DIN VDE 0100-724

#### Important protection requirements:

- Wiring must be either permanently routed or routed in suitable hollow spaces. With permanent routing, the wiring must be equipped with suitable strain relief at the point of entry to the furnishing object. With routing in hollow spaces within the furnishing object, the wiring must be equipped with suitable pushing/strain relief at the point of entry to the furnishing object and at the equipment itself.
- Junction boxes and equipment boxes, installation distribution boards and similar devices or recessed installations must comply with the test requirements for cavity wall sockets per DIN 57606 / VDE 0606 and must be marked accordingly.
- Electrical installation devices for flush-mounting must not be fastened into cavity wall sockets with claws.
- Cavity wall sockets and cavity wall distribution boards must be installed such that they are protected from mechanical damage.
- Note: This can be done by means of installation in inaccessible cavities, in recesses or through additional mechanical protection, for example.

Particularly suitable: The cavity wall socket range

### Photovoltaic systems per DIN VDE 0100-712

The peripherals for photovoltaic systems are generally installed outdoors. For this reason, the following important protection requirements apply:

- External influences that are to be expected such as wind, ice formation, temperature and solar radiation must be taken into account.
- The heat arising from direct solar radiation in photovoltaic systems must be reliably dissipated.
- All terminal boxes (PV generator terminal boxes and PV sub-array terminal boxes) must be equipped with a warning that active components in the terminal boxes may still be live after being separated from the PV inverter.
- The requirements for switching off the PV system for maintenance work are contained in VDE 0100-712, section 53.

Particularly suitable: RK-PV, AK, AKi, GTi, TK-PC and TG-PC

See chapter 3 (page 305 ff.) for information on outdoor installations.  
In addition, ventilation and/or drainage is essential!

**The mentioned tests are based on the following standards:**

- DIN EN 60670-1 (VDE 0606-1),
- DIN EN 61439-1 (VDE 0660-600-1),
- DIN EN 62208 (VDE 0660-511)

with all associated amendments and extensions.

**The tests described below are carried out, documented, analysed and evaluated there.**

**• DIN EN 60670-1, VDE 0606-1**

This standard applies for sockets, housings and housing parts for electrical installation equipment with a rated voltage of less than 1000 VAC and 1500 VDC, which are intended for household and similar fixed electrical installations both indoors and outdoors.

(DIN EN 60670-1, 1 Application Area)

**• DIN EN 61439-1, VDE 0660-600-1**

This standard defines terms and specifies the operating conditions, construction requirements, technical characteristics and requirements for certification of low-voltage switch gear assemblies whose rated voltage is below 1000 VAC and 1500 VDC and which are movable or fixed. (DIN EN 61439-1, 1 Application Area)

**• DIN EN 62208, VDE 0660-511**

This standard applies for empty enclosures, as supplied by the manufacturer before any equipment is installed by the manufacturer of the switchgear assembly.

(DIN EN 62208, 1 Application Area)

**Note:**

Our in-house testing laboratory is certified according to:

- UL (Underwriters Laboratories)
- DIN EN 60670-1, 60670-22, 60529

The tests described below are carried out, documented, analysed and evaluated there.

## Tests and test methods according to IEC-/EN-Standard

### Proof of mechanical structure

#### DIN EN 60670-1:

Lids, covers or cover plates or parts thereof

#### DIN EN 61439-1:

Design verification of switchgear assemblies

#### DIN EN 62208:

Type testing of empty enclosures

### Proof of non-removable lids

#### DIN EN 60670-1

The forces are applied perpendicular to the mounting surface, at the middle of the lid, gradually increasing for one minute.

### Proof of removable lids

#### DIN EN 60670-1

The forces are applied ten times, gradually increasing, to the device to remove the lid. The equipment under test shall be free of damage afterwards.

### Proof of resistance to ingress of solid foreign bodies

#### DIN EN 60670-1

#### DIN EN 62208, 9.8.1.2

The equipment under test is set up as in normal use and any existing cable inlets are fitted with cables. Protection is achieved if the probe cannot penetrate into the tested equipment (IP4X).

For protection level IP5X, no part of the inner surface may be covered by dust from the outside. For protection level IP6X, no dust may penetrate into the tested equipment. (See IP code, page 309)

Prüfsonden nach DIN EN 60529

## Tests and test methods according to IEC-/EN-Standard

### Proof of resistance to harmful effects of water ingress

DIN EN 60670-1:

DIN EN 61439-1:

DIN EN 62208:

The equipment under test is set up as in normal use and any existing cable inlets are fitted with cables. The equipment under test then has amounts of water applied in accordance with its protection rating (see IP code, page 309). The ingress of water is detected by lining the interior of the equipment under test with absorbent paper. The indicator paper is examined immediately after the test.

### Proof of the strength of materials and parts

DIN EN 60670-1:

Mechanical strength of boxes and enclosures

DIN EN 61439-1:

Corrosion resistance of switchgear assemblies

DIN EN 62208, 9.13

Corrosion resistance of empty enclosures

### Proof of heat resistance

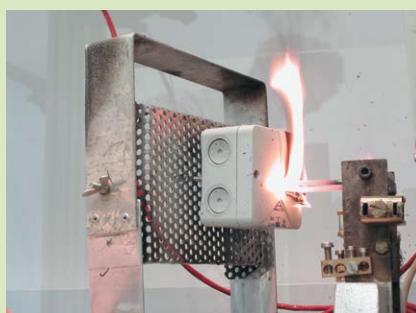

DIN EN 60670-1:

A steel ball with a 5-mm diameter is pressed down on the surface of the box or enclosure with a force of  $20 \pm 2$  N. This formation is set up in a heating cabinet and left there for an hour at a temperature of  $125 \pm 2^\circ\text{C}$ . After the time has elapsed, the equipment under test must be cooled to room temperature within 10 seconds by immersing it in a water tank. Proof is furnished if the diameter of the impression left behind by the sphere is not larger than 2 mm.

## Tests and test methods according to IEC-/EN-Standard

Start of test

End of test

### Proof of durability of plastics against excessive heat and fire

DIN EN 60670-1:

DIN EN 61439-1:

DIN EN 62208:

The resistance is determined by the glow wire test. The equipment under test is brought into contact with the hot filament for 30 seconds. The temperature amounts to:

- $960 \pm 15^\circ\text{C}$  for parts containing live components,
- $850 \pm 15^\circ\text{C}$  for cavity wall parts,
- $650 \pm 15^\circ\text{C}$  for all others.

The test is passed if the housing does not burn or glow or if the flames and the glow extinguish independently 30 seconds after removal of the glow wire. The tissue paper spread below the test set must not be ignited by falling parts.

### Proof of electrical stability

DIN EN 60670-1:

Insulation resistance and electric strength of boxes and enclosures

DIN EN 61439-1:

Protection against electric shock and continuity of earth leads in switchgear assemblies

DIN EN 62208:

Proof of insulation resistance of empty enclosures

### Proof of protection against electric shock

DIN EN 61439-1:

DIN EN 62208:

The test must demonstrate that all conductive parts of the device are effectively connected to the external earth lead. A resistance meter must be used here, which can supply at least 10 A. The test must result in a circuit resistance of  $\leq 0.1 \Omega$ .

### Proof of electric strength

#### DIN EN 60670-1:

The test voltage is applied between two metal foils as for proof of insulation resistance. The test starts with about half the specified voltage and then increases rapidly to full voltage. The test is passed if no breakdown or flashover occurs.

Rated insulation voltage [V]	Test voltage [V]	Test voltage protection class II [V]
130	1250	1875
> 130 and $\leq$ 250	2000	3000
> 250 and $\leq$ 450	2500	3750
> 450 and $\leq$ 750	3000	4500
> 750	3500	5250

#### DIN EN 61439-1:

The test voltage is applied

- between the connected poles of the main circuit and the earthed enclosure,
- between the unconnected poles of the main circuit,
- between the control and auxiliary circuit and the main circuit as well as the earthed enclosure.

In order to furnish proof, the overcurrent relay must not trigger and there should be no breakdown.

Rated insulation voltage (phase-to-phase) [V]	Insulation test voltage (AC) [V]	Insulation test voltage (DC) [V]
$U_i \leq 60$	100	1415
$60 < U_i \leq 300$	150	2120
$300 < U_i \leq 690$	1890	2670
$690 < U_i \leq 800$	2000	1830
$800 < U_i \leq 1000$	2200	3110
$1000 < U_i \leq 1500$	---	3820

Rated insulation voltage (phase-to-phase) [V]	Insulation test voltage (AC) [V]
$U_i \leq 12$	250
$12 < U_i \leq 60$	500
$60 < U_i$	$2 \cdot U_i + 1000$ min. 1500

**Proof of clearances and creepage distances and distances  
through casting compound**

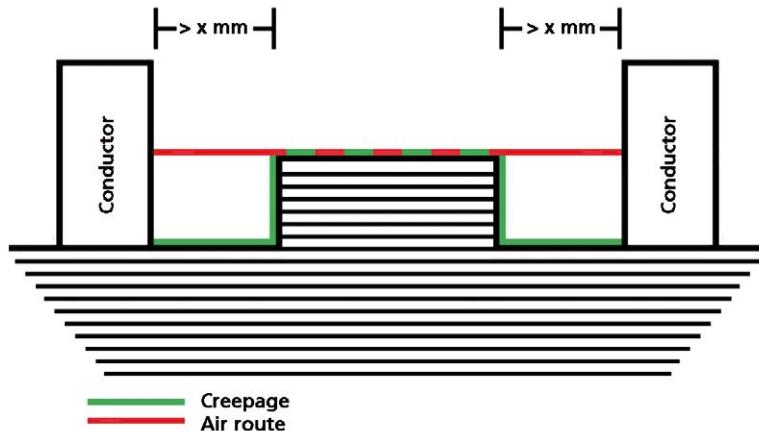

DIN EN 60670-22:

DIN EN 61439-1:

The intervals may not be less than described in Table 21 and are measured between live parts of different polarity, live parts and metal caps or sockets without insulation and live parts and the base mounting surface.

Rated insulation voltage [V]	Creepage distances, clearances and distances through casting compound [mm]
≤ 130	1,5
> 130 and ≤ 250	3
> 250 and ≤ 450	4
> 450 and ≤ 750	6
> 750	8

The clearances and creepage distances are evaluated as follows:

The distance x must be between 0.25 mm and 2.5 mm depending on the degree of contamination (see Table 22), otherwise it may not be used to extend the creepage. In this case, the creepage distance would be equal to the clearance, based on the example in the figure above (DIN EN 61439-1, Appendix F).

Degree of contamination	Smallest width x of grooves [mm]
1	0,25
2	1
3	1,5
4	2,5

## Tests and test methods according to UL – Underwriters Laboratories

**Underwriters  
Laboratories**

### Tests and test methods UL – Underwriters Laboratories

The tests referred to are based on the following standards:

- **UL 94**
- **UL 50**
- **UL 746C**

with all associated amendments and extensions.

#### **UL 94**

„Tests for Flammability of Plastic Materials for Parts in Devices and Applications“

This regulation describes the test for evaluating and classifying the flammability of plastics.

#### **UL 50**

„Standard for electrical equipment intended to be installed and used in non-hazardous locations“

This regulation sets standards for electrical appliances that are not intended for use in areas subject to explosion hazards.

#### **UL 746C**

„Standard for safety for polymeric materials – use in electrical equipment evaluations“

This regulation sets standards for materials made of polymer, for use in electrical equipment.

## Tests and test methods according to UL – Underwriters Laboratories

### Tests for Flammability of Plastic Materials for Parts in Devices and Applications.

#### UL 94

The test is conducted with an open flame. Depending on the classification, the flame has a power of 50 watts (20 mm high flame) or 500 watts (125 mm high flame). The ignition source acts on the test object for 30 s in the case of the horizontal burning test (HB), twice for 10 s with the vertical burn test (V) and five times for 5 s with the 5V test and is then removed again. The burning time and also the fragmentation of burning parts in the case of V-tests are assessed. A cotton ball placed under the test set must not ignite.

#### Classifications:

A material sample (thickness <3 mm) is placed horizontally above a 50 W flame 20 mm high.

Classification	Conditions
HB	Self-extinguishing
HB75	Burning < 75 mm/min.
HB45	Burning < 40 mm/min.

A material sample is placed vertically above a flame with 50W power and a height of 20 mm.

Classification	Conditions
V-2	Self-extinguishing up to 30 s following removal of the flame, burning drops permitted
V-1	Self-extinguishing up to 30 s following removal of the flame, no burning drops permitted
V-0	Self-extinguishing up to 10 s following removal of the flame, no burning drops permitted

A material sample is placed vertically above a 500 W flame with a height of 125 mm ± 10 mm.

Classification	Conditions
5VB	Self-extinguishing, no burning drops, burn holes are permitted
5VA	Self-extinguishing, no burning drops, burn holes are not permitted

#### Note:

As an alternative to materials with the material classification 5VA, the UL 50 regulation also permits material that has the classification HB and has passed the flame test according to UL 746C, Selection 17 „Flammability 127 mm (5 inch) flame“. The material thus tested is comparable to material with the classification 5VA according to UL 50.

## Tests and test methods according to UL – Underwriters Labs

### Test of proof against mechanical stress

#### UL 746C

In order to prove protection against mechanical stress, impact stress must be applied to the equipment under test.

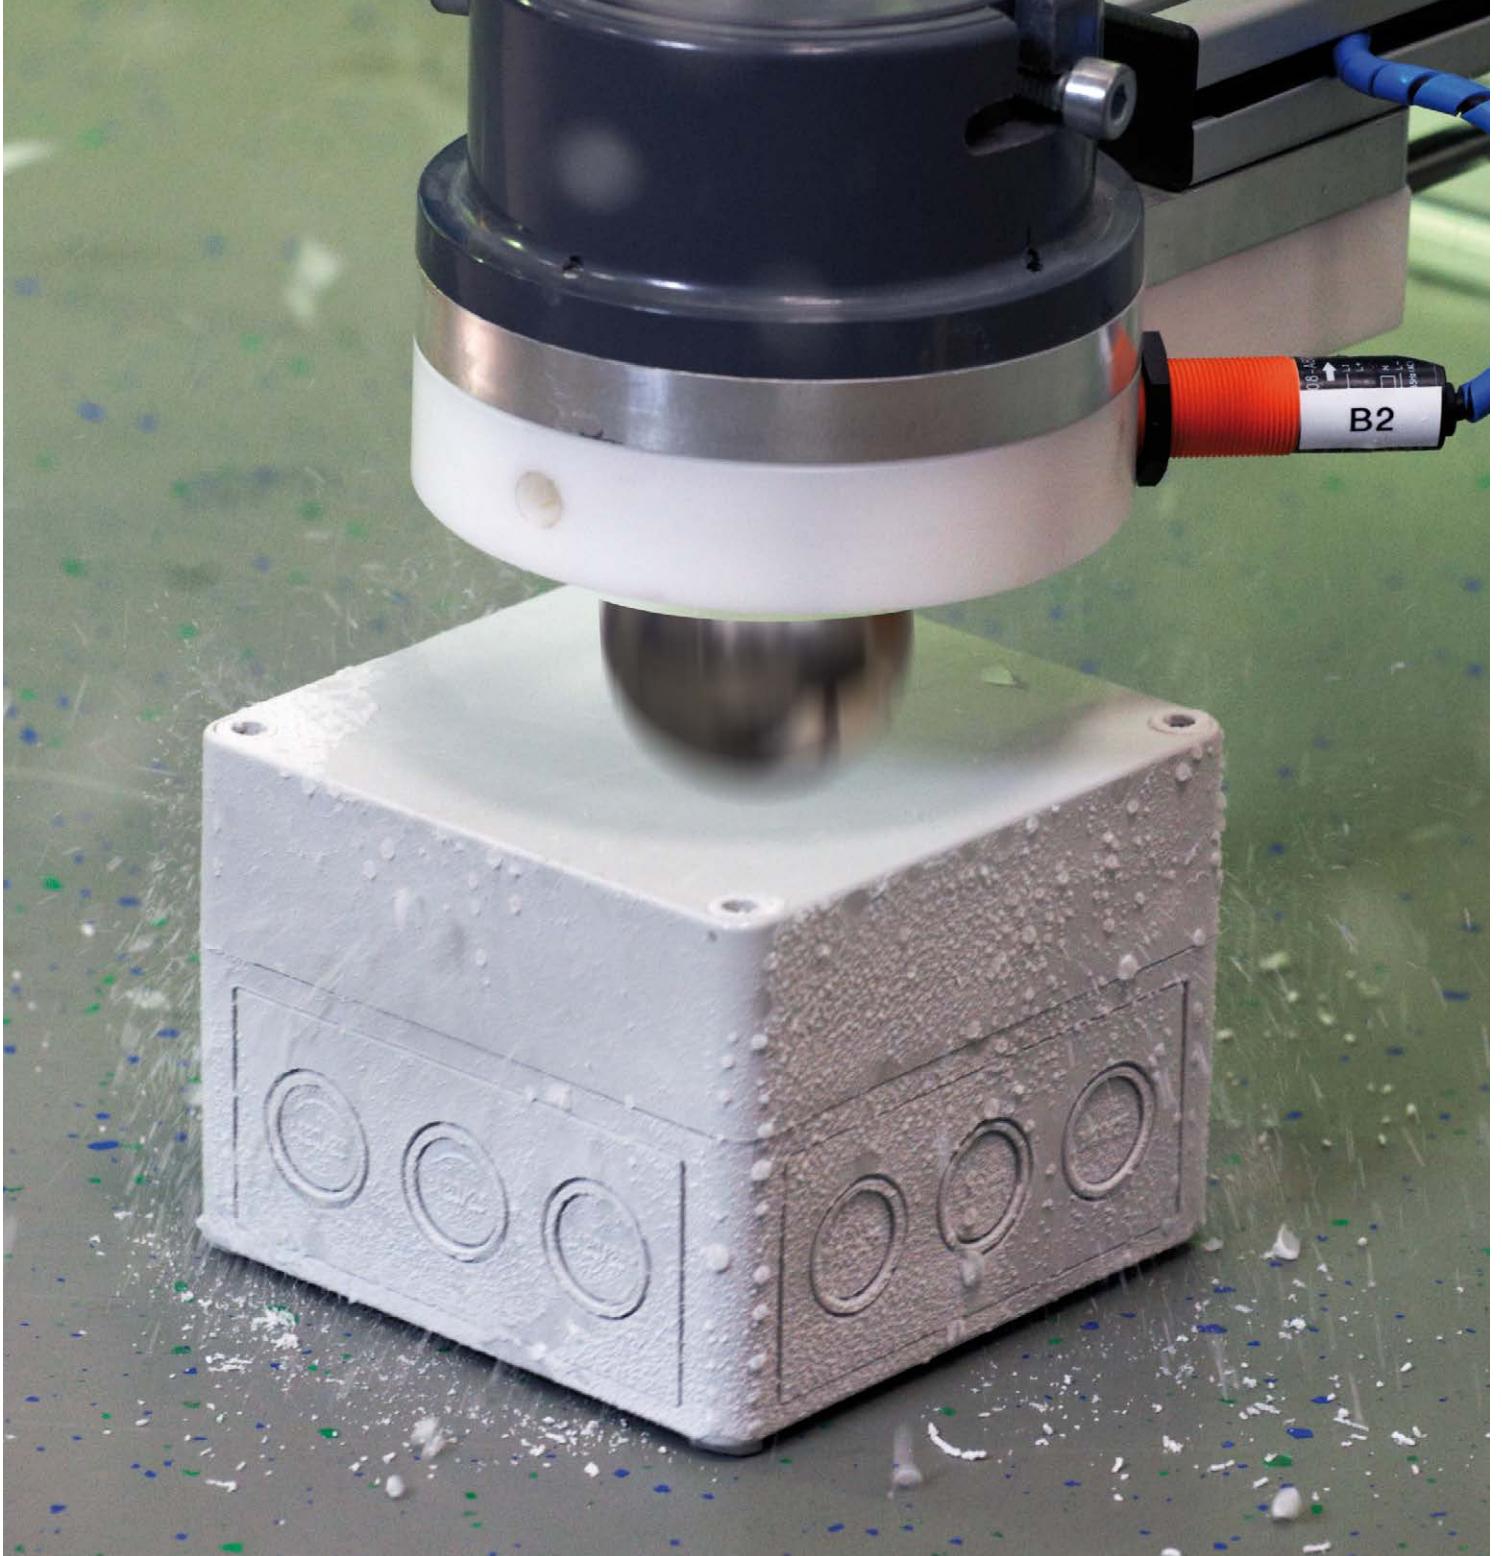

Equipment intended for outdoor use is cooled for three hours in a cold chamber at  $-35 \pm 2^\circ\text{C}$  and then mounted on a rigid frame appropriate to its planned use.

In the cold state, a single blow is applied with a steel ball of 50.8 mm (2 inches) in diameter and weighing 0.535 kg (1.18 pounds) to the surface being tested.

In order to furnish proof, the equipment under test must be free of any damage that may interfere with its proper use. Furthermore, the intended protection rating must not be changed negatively.

The splinters are ice residue from the cooling process at  $-35^\circ\text{C}$ .

# Network types according to DIN VDE 0100-310

A distinction is made between different network types in the context of the safety assessment. The differences relate to the number of live conductors and earthing points.

## Note:

Neutral conductor (N)

Earth lead (PE)

PEN conductor (PEN)

The network types are as follows:

- TN networks
- TT networks
- IT networks

T = Terra (Latin for earth)

N = Neutral

I = Isolation

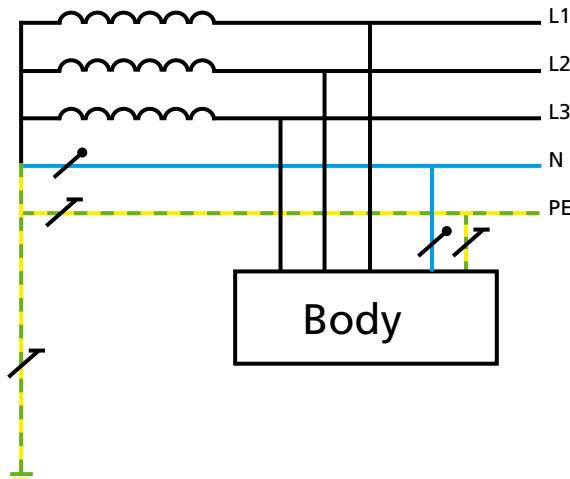

S = Séparé (French for separate)

C = Combiné (French for combined)

The neutral point of the source is earthed directly in the **TN network**.

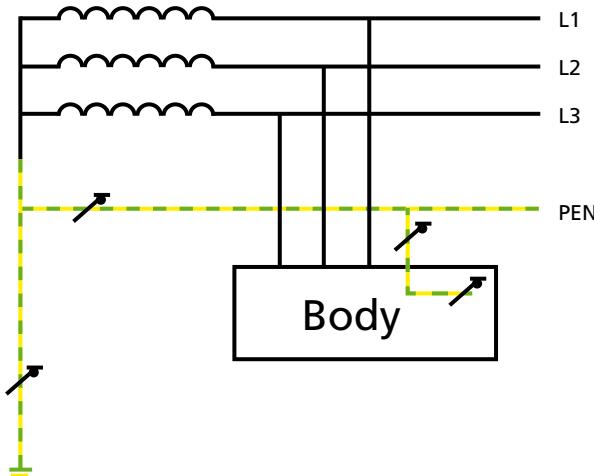

The bodies of the connected devices are connected to the neutral point of the network via an earth lead.

## TN-Network

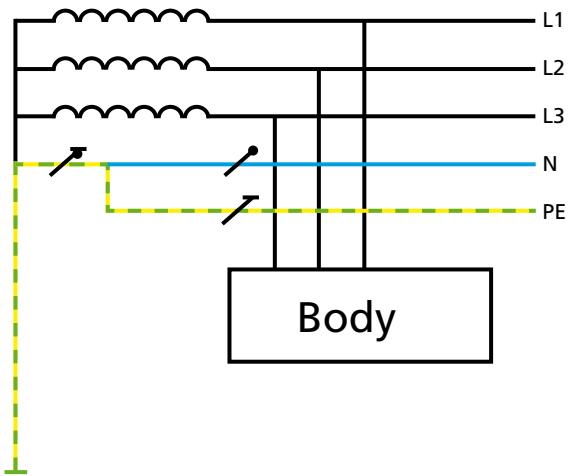

TN-S network: Neutral conductor and earth lead separated

## TN-Network

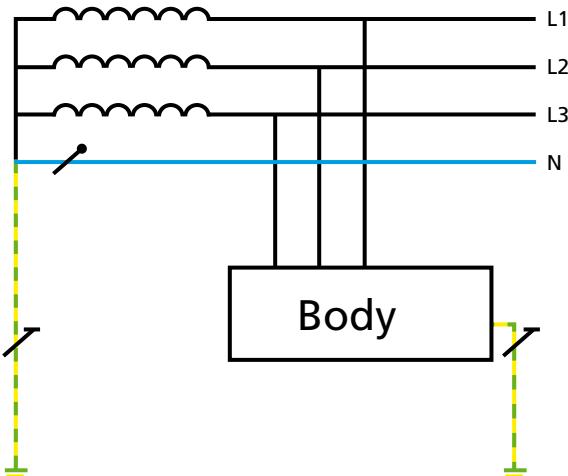

TN-C network: Neutral conductor and earth lead combined in PEN conductor.

**TN-Network**

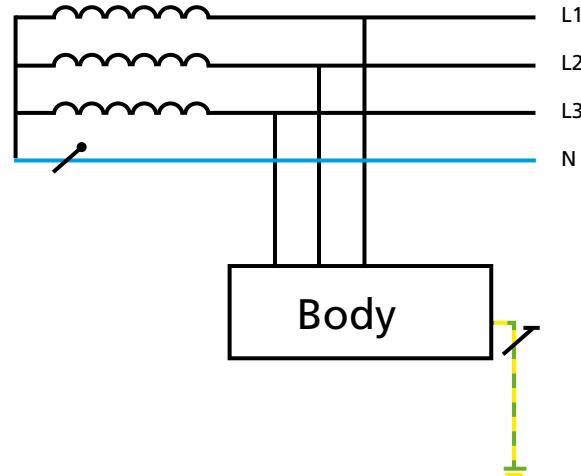

**TN-C-S-Network:** Neutral conductors and earth leads are combined initially so that they can then be separated. (cross-section reduction)

**TT-Network**

In the **TT network**, the neutral point of the network and the bodies of the connected devices are separately connected directly to earth.

**IT-Network**

The neutral point of the network is not earthed in the **IT network**.  
The bodies of the connected devices are separately connected directly to earth.

## Conformity to specifications and standards

The development, testing and production per national regulations, European standards and special approvals document the high safety standard of els brand products.

### Quality management system per DIN EN ISO 9001

„Register number: 2923 / QM 02.97 (AA)  
from the VDE testing and certification  
institute“

screw-less clamping points

Extract from the determination of inspection intervals from the DGUV regulation 3 (formerly BGV A3):

**Electrical systems and stationary equipment:**  
Inspection interval 4 years

**Portable electrical equipment:**  
Guide value 6 months, 3 months  
on construction sites

**Fault current, differential current and fault voltage circuit breakers:**  
6 months in stationary systems, every  
working day in non-stationary systems

**Acceptance by the end customer and handover of fully functional system**  
An acceptance procedure and handover to the end customer is carried out at the conclusion of the commissioning.  
The order is completed with the issue of the associated final documentation, test logs and handover reports.

It is advisable to generate a handover report and a test log.

There is a template from the ZVEH available for this.

#### Inspection intervals

The operator shall ensure that the electrical system and equipment is checked to ensure that it is in a proper condition:

- Prior to initial commissioning and after any change or repair work, before the recommissioning by an electrician or under the guidance and supervision of an electrician.
- At defined intervals.  
The intervals are to be set such that defects that would normally be expected to arise are detected in good time.

## General Terms and Conditions

### 1. For all deliveries

- including deliveries from our agents' stocks – the following terms shall be applied:
- 1.1 the "Warranty regulations of manufacturers of installation devices and installation systems"
- 1.2 "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry for Commercial Transactions between Businesses" in the version as amended by Zentralverband der Elektrotechnik und Elektronikindustrie (ZVEI) e.V.", the German Electrical and Electronic Manufacturers' Association
- 1.3 in addition, the following paragraphs 2 to 12. We will happily send you the above mentioned norms, delivery terms and clauses, if required. The documents can also be downloaded from our web site ([www.spelsberg.de](http://www.spelsberg.de)). We here-with reject the conditions of purchase of our customer unless they are explicitly acknowledged by us. Our terms will be acknowledged will be considered the sole binding legal foundation when delivery is taken of objects supplied by. Order confirmations will only be sent if requested expressly.

### 2. Small orders

for less than 100 euro will not be granted any discount but invoiced gross for net.

### 3. Sea- proof packing

Will be supplementary invoiced only in case of packing in containers.

### 4. Delivery freight prepaid

(freight paid, packing included) will be carried out within the territory of Germany for a net order value of more than 1,000 euro. Haulage payable at destination shall be borne by the receiver of the goods.

### 5. Dispatch

will always be carried out at receiver's risk, even in case of agreed delivery freight prepaid.

### 6. Suitability and nature of goods

Any indication and information concerning suitability, nature and application our of goods shall not discharge our customer from their own controls and tests. The customer processing our goods shall be assume liability for dispositions prescribed by law, public agencies and electric supply companies.

### 7. Claims

shall only be acknowledged within 8 days of the receipt of the consignment. On receipt of the goods, the person delivering the goods must confirm any visible damage to goods in transit on the relevant delivery notes.

### 8. Return of goods

shall be rejected unless we have given our prior acceptance. In case of non-compliance the company /person returning the goods shall assume liability for any costs and disadvantages.

### 9. Our payment terms

are within 10 days less 3 % cash discount or net within 30 days. If the customer is in arrears of payment, we are entitled to claim interest in the amount of the current base interest. Should the customer's solvency be doubted, in particular in case of payment in arrears, we are entitled, subject to all other claims, to demand payment in advance or guarantees or revoke already granted credit terms.

### 10. Place of performance

for delivery, payment and other contractual performances of both parties is Schalksmühle. Place of jurisdiction is Lüdenscheid. German law governs the relationship between the contracting parties.

### 11. Data protection

We are entitled to use data arising from the business relationship with our customers, regardless their origin, within the meaning of the BDSG (the German Federal Data Protection Act).

AK - The distribution board | Air®-Technology | One for all | Models | Contact

**AK - The distribution board!**  
With Innovative Air®-Technology

VDE-certified | DLG focus test | **Air®-Technology** | One for all | iF Design Award

**Air®-Technology**  
Innovative - unique!

The Air® ventilation elements avoid Condensate water under preservation of high protection class IP65. Occurring condensate is transported out of the enclosure immediately via air exchanger. The continuous and high air exchange allows the interior air to mix constantly with the environmental air and transports the moisture outward. Even environments with nearly constant humidity and temperature possess air exchange, since the air on the interior of the enclosure warms due to the fittings. The individual components of the ventilation elements mainly consist of the rotating cover (rear side of box) and the filter element integrated on the inside of the box.

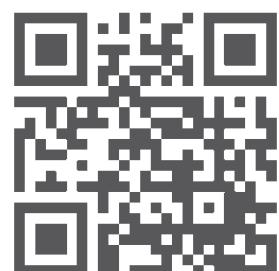

**Advantages of Air® ventilation elements**

- Prevention of condensate water in preservation of high protection class IP65
- High air exchange rate
- 100% pressure compensation
- 100% foreign object protection
- Maintenance-free

**Innovative Air®-Technology**
