

Geocel®

Geocel®

Silicone Sealant Remover

- ### INSTRUCTIONS FOR USE
1. Unwanted silicone sealant should be cut back as close to the surface as possible using a sharp blade.
 2. Take care not to apply Silicone Sealant Remover to areas of correctly applied silicone sealant. These areas may be protected using masking tape.
 3. Apply a liberal coat of Silicone Sealant Remover to the affected area using a small paint brush.
 4. Allow to stand for 2 hours. Wipe clean with a paper tissue or dry cloth.
 5. If traces of silicone sealant still remain, repeat application.
 6. Surfaces should be degreased with a solvent such as methylated spirits, before applying fresh sealant.

Apply to dry surfaces only. It is advisable to carry out a compatibility test before application to your surface. If rain is imminent the product should not be applied. Do not use on Nylon or non-silicone sealants. Please note this may cause staining if used on timber treated finishes and masonry.

For further information on specific applications, please contact our Technical Services Department.
Store between 5°C and 15°C. Container should be kept tightly sealed when not in use.

Geocel is a strategic partner of Dow Corning.
