# PremisNET®

Voice Patch Panels

Full-featured patch panels for voice installations

- Available in 25 and 50 port variants, both 1U 19"
- Designed specifically to integrate voice circuits into standard structured cabling systems
- Expansive cable management for maximum cable protection
- Innovative sliding panel mechanism for improved ease of installation
- 2 pair 258A voice wiring configuration

KRONE®

The 1U Voice Patch Panel range from KRONE comprises two versions for use with the multi-pair voice cables – the 25 port RJ45 version or the higher density 50 port RJ45 version.

These products are an ideal way to integrate PBX or other voice circuits into a standard structured cabling system.

The innovative design has a range of features not usually seen on voice panels. These include a smooth sliding mechanism that significantly improves the ease of installation and an expansive cable management area to offer maximum protection for cable.

By introducing the innovative sliding option, the panel can be secured within the voice frame and then by simply loosening two screws, the panel can slide out ready for the cable to be punched down.

Both products can be wired in a 2 pair 258A voice configuration. In addition, an accessories kit is supplied which includes labels, fixing screws and cable ties.

As with all KRONE voice and data products, the Voice Patch Panels use the LSA-PLUS® Quick Connection technique, a highly reliable and cost-effective wire termination method.

Technical Summary

Compliance to Standards	IEC 297
Dimensions	483mm x 44mm x 252mm deep (incl handles)
Operating Temperature	-20°C to 80°C non condensing
Weight	1.3kg
