

product guide

**KEEPING
YOU SAFE**

our vision

We believe in a world that everyone has the right to lead a safe and healthy life, protected from unnecessary risks. **Our vision is to create that world** 🌍

our approach

I'm often asked how a young business makes itself recognised in such a competitive market. It's one of my favourite questions and one I always answer in the same way.

"We never lose sight of the fact that our business is all about our customers"

By understanding both our distributors' and our end users' needs, anticipating how they will evolve in the future, and focusing on hand protection solutions for them in the long-term, we can build on our vision.

Our mission is to improve peoples' safety and health both at work and home by providing protective products and services, so **our business is built upon the simple founding principle of Keeping You Safe.**

Of course, appreciating what matters most to an individual end user is just the start. We also invest in understanding the distribution chain. Both the big picture and the fine detail are important – that's why we pride ourselves in having a specialist sales team with experience across the markets we serve. They provide our end users with a unique lens on the glove world and allow us to work with them in visiting customers and gaining insight.

Delivering value to our customer chain demands innovative solutions to keep us ahead of our competition. That means we're tough with ourselves – designing, testing and manufacturing new products and ruthlessly discarding anything that doesn't measure up now or in the future.

Customer focus, specialist teams, innovative solutions – it's a simple story that you'll hear from our colleagues in every part of the Unigloves business. All three are work in progress – constantly developed, tuned and delivered for our customers now and for their future hand protection needs.

who we are

UG Healthcare Group

Our parent company, UG Healthcare Corporation, has been manufacturing high quality single use gloves since 1988 and is one of the world's leading glove manufacturers, producing over 130 gloves every second of every day. UG Healthcare Corporation is listed on the Singapore Stock Exchange with SGX Symbol 8K7.

Our products play a vital role in healthcare and personal protection around the world, so **our business is built upon the simple founding principle of Safety through Quality: quality products backed by quality service and support.**

Bona fide 
manufacturer
with **4** factories
in Malaysia

Annual output of
4 billion gloves
with **future growth**
under **way** 

Group owned
distributors 
on **5** continents

UK Business

The UK sales and marketing office supplies Unigloves-manufactured single use gloves to European wholesalers and retailers across multiple sectors, with a focus on the automotive aftermarket, the food industry, and the medical market. We are dedicated to helping our partners grow sales and margins. During the twelve months prior to the pandemic, we achieved an average revenue growth rate for our top partners of 20%. We help you select the best products for you and your market, and we support you with sales, marketing, logistics and technical and regulatory support.

Partnership approach to customer relationships

Ambition, passion and drive run through the business

Our product offering ranges from very low cost, entry level, economy medical gloves, through to market leading premium quality products of exceptional comfort, durability and performance.

Single line business entirely focused on gloves

UK's widest stocked range of single use gloves

Experienced team, structured for major account growth

Continuous improvement at the core of our business

Simple, efficient and well-managed supply chain

Cost controls paramount

what we offer

sales support

Dedicated Support

Dedicated, experienced sales support and internal buddy, to ensure your account is proactively managed, including joint visits to end users to enhance sales and margin.

Enterprise-Grade IT

Enterprise-grade IT system with customer centric features, to ensure you have accurate and reliable information on your business with us.

24/7 Access

Our full-function online account management platform is available 24/7 so you always have instant access to your account and order history.

Factory Direct

Commercially competitive and consistent pricing; we pass on the benefits of our efficient supply chain to you.

marketing support

Supported Brand

Significant recent investment in brand and product collateral; expert help, tools and materials to promote our products and maximise your returns.

Product Samples

Prepacked sample sleeves; we bear the cost of sample requests and product trials so you don't have to.

Experienced Team

Experienced, industry savvy, marketing and design team, dedicated to providing you with professional support for joint online and offline marketing campaigns.

Digital

Digital marketing platform for web and social media marketing to provide greater reach to end users and to provide a steady stream of inbound enquiries.

technical support

Training

Product training from our experienced technical team, so you can equip your sales team with product knowledge and position them as the product experts.

Reliable Data

Detailed, reliable factory technical data; have confidence that you're selling the product you think you are.

New Product Development

Product development and innovation; differentiate a product often perceived to be a commodity by offering our first-to-market gloves.

Factory Support

Support from the factory team; direct communication with the factory's decision makers.

Contact Technical Support: technical@unigloves.co.uk

logistics support

We tailor our logistics to your requirements, whether it is cartons to multiple locations, pallet quantities to a distribution centre, or containers to a central hub

Century Logistics

Award winning logistics partners with an enviable 'on-time-in-full' track record so you can be confident products will arrive just in time.

Planning

Flexibility and low minimum order quantities, so you can optimise your orders and use your warehouse for higher margin opportunities.

High Stock Holdings

High stock holdings in UK and Malaysia to help mitigate and minimise supply chain risks.

Flexibility

Logistical flexibility: deferred stock; ring-fenced stock and forward orders; bespoke and specific ways to manage stock and consignments to give you competitive advantage.

distributors end users

Distributors

'We believe that getting our products into your warehouse is the start of our partnership, not the end.'

We build our relationship through:

- Our professional, North and South regional sales teams
- Our dedicated, UK based customer service team
- Our technical glove expertise
- Our suite of support materials

End Users

Unigloves only sells to Distributors and as the name suggests, end users are the ultimate user of our product range so it's important that we keep channels of communication open to them, so we can:

- gather feedback on our product range
- gather insights into how our products are used and to innovate and develop the next generation of hand protection solutions
- test new product ideas and enhancements
- audit work stations on site to be able to specify the best glove for the job

explanation of standards

EN 388 glove standard explained

▷ Abrasion

The abrasion test enables glove samples to be rubbed against a standard sandpaper. The machine is stopped at set intervals and the samples inspected for holes produced by rubbing.

▷ Cut (coupe method)

The cut test uses a circular blade in a slicing action across the surface of the glove sample. The performance of the glove is measured relative to a piece of control fabric and the results calculated as a cutting index. This test has problems with high cut resistant fabrics, caused when the blade becomes blunt and is unable to cut through the control fabric. When this happens the cutting index either cannot be calculated or produces an obviously low result so when dulling of the blade reaches a prescribed level, the ISO cut test is used to determine cut resistance instead.

▷ Tear

The test piece is trouser shaped so the test measures tear propagation, not tear creation. A tensometer is used to pull the “legs” apart.

▷ Puncture

This test is sometimes mistaken as a measurement of resistance to needles, but the test actually measures the resistance of the material to puncture by a test stylus shaped like a blunt nail, it is a type of burst strength test.

▷ Cut (ISO method)

The ISO cut test uses a straight edged blade to measure cut resistance, which is determined as the force required to cut within a given distance. As the blade has variable weights applied to it, this corresponds to a Newton (N) value. As the blade edge is used only once, this method has been found capable of measuring higher cut resistance values.

▷ Impact resistance

This is based on the protective gloves for motorcycle riders tests and measures the force transmitted to the hand. In reality, the test looks like a weight being dropped onto a ladle.

▷ Levels of performance

Test	Level 1	Level 2	Level 3	Level 4	Level 5
6.1 Abrasion resistance (number of rubs)	100	500	2 000	8 000	-
6.2 Coupe test:					
Blade cut resistance (index)	1,2	2,5	5,0	10,0	20,0
6.4 Tear resistance (N)	10	25	50	75	-
6.5 Puncture resistance (N)	20	60	100	150	-

► Levels of performance for materials tested with EN ISO 13997

	Level A	Level B	Level C	Level D	Level E	Level F
6.3 TDM: cut resistance (N)	2	5	10	15	22	30

Example of marking for the mechanical risks:

- Example 1: 3 4 4 3 E P
- Example 2: 3 X 0 3 E
- Example 3: 3 2 0 3 X

► Explanation of the above examples

Example	1	2	3
Abrasion resistance (6.1)	Level 3	Level 3	Level 3
Cut resistance (6.2)	Level 4	Test not performed or not applicable	Level 2
Tear resistance (6.4)	Level 4	Level 1 not achieved	Level 1 not achieved
Puncture (6.5)	Level 3	Level 3	Level 3
Cut resistance (6.3)	Level E	Level E	Test not performed
Impact protection	Achieved	Test not performed	Test not performed

Personal Protective Equipment regulations

Personal Protective Equipment (PPE) is designed to protect the user from hazards, the principal European legislation is the PPE Regulation (EU) 2016/425.

Our gloves certified under these regulations protect the user against common hazards found in industry: micro-organisms and chemical hazards. The main standards for gloves certified as PPE are listed below.

▷ EN ISO 374-1

This contains the terminology and performance requirements for chemical protective gloves including a list of 18 chemicals whose code letters can be used on the glove marking. Permeation testing is carried out using EN 16523-1. Three different types of performance level are defined:

▷ **Type A** gloves achieve level 2 or greater against 6 of the 18 chemicals

▷ **Type B** gloves achieve level 2 or greater against at least 3 of the 18 chemicals

▷ **Type C** gloves achieve at least level 1 against 1 of the 18 chemicals

CODE LETTER	CHEMICAL	CODE LETTER	CHEMICAL	CODE LETTER	CHEMICAL
A	Methanol	G	Diethylamine	M	Nitric acid 65%
B	Acetone	H	Tetrahydrofuran	N	Acetic acid 99%
C	Acetonitrile	I	Ethyl acetate	O	Ammonium hydroxide 25%
D	Dichloromethane	J	n-Heptane	P	Hydrogen peroxide 30%
E	Carbon disulphide	K	Sodium hydroxide 40%	S	Hydrofluoric acid 40%
F	Toluene	L	Sulphuric acid 96%	T	Formaldehyde 37%

▷ EN374-2

Penetration is the movement of a chemical through a material, seam, pinhole or other imperfection when tested to:

- the air leak test where a glove is inflated under water or
- the water leak test where a glove is filled with water In both tests, the glove shall not leak

▷ EN374-4

Degradation is a change in glove material, typically flaking, swelling, change in appearance, or hardening. The results are expressed in % where a positive number indicates the material is weaker after testing and a negative number indicates the material has harden during testing.

▷ EN374-5

This contains the terminology and performance requirements for protective gloves against microbiological agents - bacteria, virus or fungi. Penetration testing is required as per EN374-2, but gloves offering protection against viruses shall additionally pass a penetration test performed to ISO 16604:2004 determination of resistance of protective clothing materials to penetration by blood-borne pathogens.

▷ **EN420 & EN ISO 21420**

Defines the general requirements of gloves to comply with the PPE regulations.

These regulations and this standard is primarily concerned with **protecting the wearer.**

▷ **EN1186**

Food safe

In conjunction with Articles in Contact with Food regulations, defines the requirements of gloves in contact with food.

UKCA News

Post-Brexit, new glove markings called UKCA (UK Conformity Assessed) came into effect in the UK from the 1st of January, 2021. However, to allow businesses time to adjust, CE markings can be used until the 1st of January 2023. Unigloves is working with the UK Approved Bodies to ensure our PPE complies with CE and UKCA requirements; certification is already underway.

Medical device regulations

The Medical Devices Regulation (EU) 2017/745 governs our range of medical gloves and ensures products are safe for patients and users.

▷ **EN455**

Is a series of standards that define medical gloves and their requirements.

The medical device regulation and EN455 are primarily concerned with protecting the patient.

▷ Part 1

Requirements and testing for freedom from holes

Gloves must pass this test at AQL level 1.5 in order to prove that they are an effective barrier against micro-organisms.

▷ Part 3

Requirements and testing for biological evaluation

Includes tests for potentially hazardous materials that may affect the wearer or be transferred to a patient, including endotoxins, latex proteins (can cause Type I reactions), chemical residues including accelerators (can cause Type IV reactions) and powder (powder free gloves should have a powder level of <2mg per glove).

▷ Part 2

Requirements and testing for physical properties

Gloves must meet set dimensions and physical strength depending on the material.

Force at break (Newtons)

Latex	6.0
Nitrile	6.0
Vinyl	3.6

▷ Part 4

Determination of shelf-life

Specifies tests for determining how long a glove will be fit for use. five years is the maximum shelf-life that can be claimed for medical gloves.

technologies

Sanitized® Hygiene and Odour Control Function

Glove users demand long-lasting odour control when they are wearing gloves to protect their hands. The Sanitized Hygiene and Odour Control Function is integrated within the glove, neutralising odours and reducing microbial growth. Gloves with this special feature are denoted with the Sanitized Actifresh logo. This article contains a biocidal product with the active substance zinc pyrithione.

NitreGrip® Technology

NitreGrip Technology occurs in the Nitrex range of gloves that feature a new, advanced surface treatment that provides a secure grip when working in wet and oily conditions and maintains its quality when used in the dry. The sandy nitrile gives an assured grip finish on the nitrile's surface, comparable to a suction cup that attaches itself firmly to the material being handled. The surface treatment reduces the force needed to grip and allows the glove to stay soft and therefore comfortable, which reduces hand fatigue.

NitreGuard® Technology

NitreGuard Technology is associated with Nitrex gloves for use in areas with a high cut risk. The technology is related to Nitrex gloves scoring cut levels D to F, only awarded to gloves achieving a straight blade cut resistance of ≥ 15 Newtons (EN388:2016). Gloves featuring NitreGuard Technology are recommended for use in industries working with glass, sharp metal objects, sharp edges, etc.

Pearl

Gloves don't have to be blue or white. With a selection of **fifteen colours**, Unigloves Pearl is a selection of coloured nitrile gloves so you can colour-code in any environment.

Pearl has been designed with functionality in mind by offering a series of colours suitable for colour-coding in the work environment to help avoid cross-contamination.

Derma Shield

What is Derma Shield?

Forget traditional barrier creams; Derma Shield is the solution that skin's been waiting for as it: **1) Moisturises, 2) Nurtures and 3) Protects.**

Derma Shield is CE marked and manufactured in the UK to Medical Device Standard ISO 13485:2016. **Note: Derma Shield is not a glove substitute and can be worn in conjunction with gloves!**

Who uses Derma Shield?

A vast range of things can cause skin problems. It could be oils, greases, coins, papers, skin sanitiser, inks, coolants, or just working outdoors in all weather. In short, Derma Shield can be used anywhere, including food processing, factories, construction sites, dentists, healthcare professionals, tattoo artists – the list goes on.

▷ **500ml**

Unigloves Hand Gels

Unigloves Hand Gel kills (in as little as 30 seconds) up to 99.99% of the common bacteria, fungi, yeast and viruses that can cause infection or illness. This alcohol-based hand gel or sanitiser contains Vitamin E to protect against drying and leaves hands soft yet instantly clean. This clear gel is fragrance-free and easy to dispense, avoiding any sticky residue.

If you would like further information on our wide range of products and services, or require samples and prices, please contact our team:

✉ enquiries@unigloves.co.uk

☎ +44 (0)800 049 6602

* The last digit of the order code is dependent on the glove size, e.g 1 = X/Small, 5 = X/Large. (N.B. Not all gloves are available in XS or XL)

Wearing the right size glove is important.

Tight gloves can restrict dexterity, cause discomfort and hand fatigue. Loose gloves that don't have the requisite stretchiness represent a safety hazard to users and also can result in unnecessary fatigue.

Size 06 | XS

Size 07 | S

Size 08 | M

Size 09 | L

Size 10 | XL

Size 11 | XXL

Size 12 | 3XL

Please note that this guide should be printed on A4 at actual size, as using enlarge or fit to page settings will change the size of the guide. Use the printed ruler to check it has been printed the correct size.

To determine your glove size, place your left hand over the image above, with your thumb to the right and fingers closed. Measure your hand across the widest point as depicted.

We recommend that you try gloves prior to use to ensure the best fit.
