Features

- Single-function time relays are suitable for universal use in automation, control and regulation or in house installations where there is a clear function requirement in advance.
- All functions initiated by the supply voltage can use the control input to inhibit the ongoing delay (pause).
- Universal supply voltage AC/DC 12 – 240 V.
- Time scale 0.1 s - 100 h divided into 10 ranges:
- (0.1 - 1 s / 1 - 10 s / 3 - 30 s / 6 - 60 s / 1 - 10 min / 3 - 30 min / 6 - 60 min / 1 - 10 h / 3 - 30 h / 10 - 100 h).
- Output contact: 1× changeover / SPDT 16 A
- Multifunction red LED flashes or shines depending on the operating state.

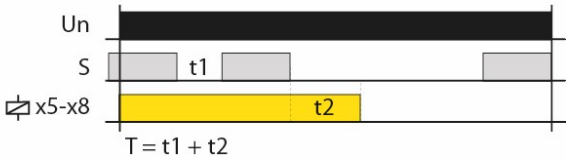
Function

ZN INTERVAL ON

When the supply voltage "Un" is applied, output contact(s) " " closes immediately and time delay "T" starts. Output contact(s) " " opens after the delay has elapsed. If the supply voltage "Un" is disconnected, the output contact(s) " " are opened and the function is reset. Control input "S" is not used in this function.

INTERVAL ON with Inhibit



When the supply voltage "Un" is applied while the control input "S" is closed, the time delay "T" doesn't start. The delay only starts when the control input "S" is open. The output contact(s) " " will close after the delay has elapsed. If the supply voltage "Un" is disconnected, the output contact(s) " " are opened and the function

Mote: ZN function is initiated by connecting the supply voltage to the device, i.e. in the event of a failure and recovery of the supply voltage, the relay automatically performs 1 cycle.
