Epoxy Mixer Nozzle, 50L Bayonet 20 Mixing Elements 5.9in

RS Stock number [503-385](#)

Description:

The mixing nozzle has a bell inlet which fit Nordson EFD Valve manifolds and large volume cartridges that separately port the A and B materials directly into the mixer. Clean up simply involves removing the mixer and wiping the manifold face clean. In the case of the cartridges, because of the divider fin, simply remove the mixer. A metal jacket is recommended if the working pressure inside the nozzle exceeds 150 psi (10 bar) (only used with meter mix valves or manifolds).

Specification:

- Elements: Acetal
- Housing: Polypropylene
