post-consumer recycled material

Available in
Green or Black

* Also available with different types of castors

This RS PRO wheel is manufactured from advanced Nylon 6 containing **70% post-consumer recycled material**, delivering reliable performance while helping organisations reduce their environmental impact. Compared with conventional virgin Nylon, the material offers a **74% reduction in CO_2 emissions**, helping to reduce the environmental impact of the product lifecycle.

The durable Nylon 6 construction provides excellent wear resistance, high load-bearing capability and long service life, making it suitable for a wide range of industrial material handling and mobility applications. Designed to combine performance with responsible material sourcing, this wheel is an ideal choice for organisations seeking more sustainable engineering solutions without compromising on quality or reliability.

Key Sustainability Benefits

- 70% post-consumer recycled material
- 74% reduction in CO_2 emissions vs standard Nylon
- Reduced reliance on virgin raw materials
- helping organisations reduce their environmental impact.

Performance Benefits

- Tough, durable Nylon 6 construction
- Excellent abrasion resistance
- High load-carrying capability
- Long service life in industrial applications
- Non-Marking
