

TVAC80000A

Digital HD Door Viewhole

With this battery-operated, digital spy hole, residents always see who is standing at the door. Thanks to its simple operation, complete scope of delivery, and easy mounting, the HD spy hole is very suitable for over-the-counter sales.

Protection of privacy

The video spy hole makes it easy for residents to recognize strangers at the door. Thanks to HD resolution (720p) and the display with zoom function.

Very convenient

In contrast to conventional spy holes, residents do not need to “glue” an eye to the peephole while holding the other eye shut in order to see something. The digital spy hole offers a good alternative, since you can stand at a convenient distance and use both eyes to look at the display, allowing you to clearly see who is standing outside.

Easy to operate

The monitor is activated with the push of a button, allowing residents to see who is at the door: with both eyes and at a convenient distance from the door. An automatic recording takes place while this is happening (three individual images) – making it possible to later reconstruct who stood in front of the door and when (for securing evidence, clarifying stalking cases, etc.).

More security for those home alone

The digital spy hole offers additional security particularly when children and seniors live in the home: that’s because the image on the monitor is easy to make out even if you are not very tall and have to look at it from below!

Scope of delivery and installation

Product highlights:

- Electronic spy hole for convenient front door surveillance
- Easy retrofitting within minutes
- Wireless installation, since it runs on batteries
- 2.4" color display with zoom effect
- HD 720p resolution: 1280 x 720 (individual images)
- Save three images to the microSD card upon activation to secure evidence

TVAC80000A

Digital HD Door Viewhole

The scope of delivery includes everything that you need to retrofit the door – including an optical spy hole, batteries, and a mount. Time needed for practiced hands: Just a few minutes!

Note: The product with the English language package is TVAC80000B
