

# Type PSR, PSS & PST(B) Softstarters

PSR Softstarters

PSS Softstarters

## Softstarters

From the moment the first electrical motors appeared, engineers have been searching for a way to avoid electrical and mechanical problems that occur using Across the Line and Wye-Delta starters. ABB has been producing softstarters since the beginning of the 1980's. The valuable experience gained since the early 80's has been incorporated into the design of today's product ranges. With the latest series named PST, ABB has taken a significant step further in soft starting technology. Matching modern power electronics with smart circuitry and software, the new PST softstarter offers superior electronic control of the current and voltage during motor start-up, in addition to several new design features.

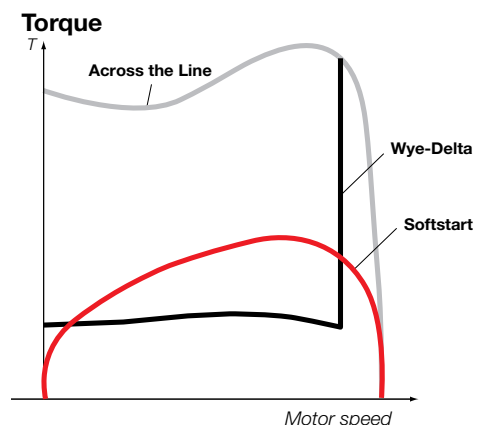

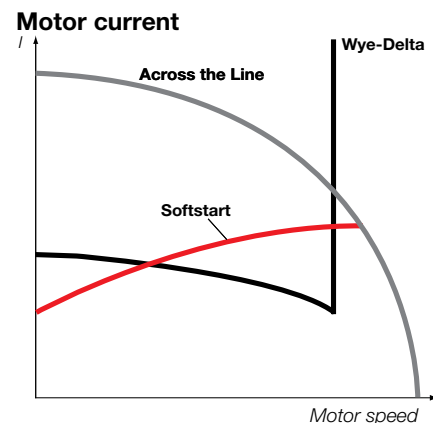

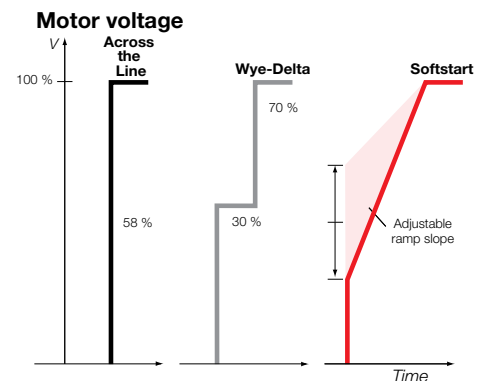

## The solution to both mechanical and electrical problems

AC motors, "the workhorse of the industry", that are used to drive fans, crushers, agitators, pumps, conveyors etc., are unnecessarily causing unwanted load peaks day in and day out in production plants all over the world. These violent starts cause damage in several ways. Among them are:

- Electrical problems due to voltage and current transients arising from Across the Line or Wye-Delta starts. Such transients may overload the local supply network and cause unacceptable voltage variations that interfere with other electrical equipment connected to the network.
- Mechanical problems that address the entire drive chain from motor to driven equipment, to severe stress.
- Operational problems, such as pressure surges in pipelines, damage to products on conveyor belts and uncomfortable escalator rides.

The financial consequences are considerable: every technical problem and every breakdown, costs money – in terms of repairs as well as lost production.

The easy solution to all of these problems is to install an ABB Softstarter type PSR, PSS or PST. With ABB Softstarters, it is possible to start and stop smoothly while keeping mechanical and electrical stresses to a minimum.

Graphs showing the basic differences between across the line starting, Wye-Delta starting and soft starting in terms of the motor voltage (V), motor current (I) and motor torque (T).

PST Softstarters

## ABB softstarters - The Complete Range

ABB offers three different ranges of softstarters to cover every customer need for solutions for small to medium sized motor applications, from 3 A to 1810 A. The overview table at the bottom of this page shows the main characteristics of the different types. For more specific technical details and ordering data, see the following pages.

### Compact Range

**Type PSR**, covers motor currents from 3 to 105 A. It is the latest addition to the softstarter family and has an attractive, compact design. Further, the system concept includes MMS and the softstarters are available for remote control connection using the FieldBusPlug as an accessory. All sizes include a Run signal relay, while from sizes 25 A - 105 A the PSR Softstarters are also provided with an output signal for TOR (Top Of Ramp), i.e. full voltage. When an auxiliary cooling fan is added, the starting capacity is increased.

- Current ratings 3 A - 105 A, 1/2 HP - 75HP at 480V
- Motor voltage 208 - 600 V
- Supply voltage 24 VDC or 100-240 VAC
- Easy to install and adjust
- DIN rail or screw mounting
- Integrated by-pass contacts
- 2-phase controlled softstarter

With their compact design, the PSR Softstarters are ideal for installation in places where space is limited and where there is a demand for easy installation.

### Flexible Range

**Type PSS**, covers motor currents from 18 to 300 A and offers a flexible solution with easy installation and setup.

- **Flexible:** With two connection possibilities, either in line with the motor or inside the motor delta. It can also be equipped with current limit.
- **Easy to set up:** With just three clearly labeled rotary switches on the front of the unit it is possible to adjust the PSS Softstarter for a wide range of applications.
- **Solid state electrical circuit:** This ensures the highest reliability and reduces maintenance to a minimum, even in applications with frequent starts and stops.

### Advanced Range

**Type PST(B)**, covers motor currents from 30 to 1050 A and provides advanced functionality, including integrated protections, programmable signal relays, a flexible communication system and an LCD display. Sizes PSTB370 to PSTB1050 include a by-pass contactor.

- **Advanced integrated protections:** For the motor; integrated electronic overload relay, phase monitoring relays, high current and PTC protection. For the Softstarter; advanced thyristor protection.

- **Flexible bus communication system:** By using the ABB FieldBus-Plug (FBP), you can decide at any time which bus system to select within the ABB FBP range. The interface between the PST Softstarter and the ABB FBP is always the same, independent of size and delivery date.
- **LCD display:** With 14 languages, a menu system similar to your mobile phone, pre-programmed application settings and automatic status and event logging, it couldn't be easier to set up and operate!
- **Programmable signal relays:** gives you several possibilities for signalling warnings, faults and other events.
- **Torque control:** allows you to start and stop motors with a more linear acceleration than when using voltage ramp.

# Type PSR Softstarters

**ABB** Softstarters  
Type PSR

## General information

Designed for motor currents from 3 to 105 A, PSR Softstarters complement the softstarter family from ABB. The PSR Softstarter is compact and easily accessible for installation in places where space is limited thanks to the two-phase controlled design.

## The PSR "Compact" Softstarter line

The PSR range comprises four physical sizes with widths from 45 to 70mm, covers rated currents from 3 to 105 A and is available for supply voltages of 24 VDC or 100-240 VAC. All sizes include a Run signal relay while sizes from 25 - 105 A also have an output signal for TOR (Top of Ramp, i.e., full voltage).

## Cooling function

Please refer to the **Number of starts per hour** chart on page 6.6.

## Installation

The PSR Softstarter is easy to set and operate thanks to the clearly marked settings. All terminals are distinctly marked and easily accessible for cable connection. Both screw and DIN rail mounting are possible (except for D Frame (PSR60 - PSR105)).

## Flexible communication

PSR can also be remote controlled by bus communication using ABB's FieldBusPlug. The FieldBusPlug accessories are available for several protocols such as Profibus DP and Device Net.

The PSR Softstarter is ideal for the replacement of across the line (ATL) starters and for installation in places with limited space.

UL File #E161428

### Description

**PSR - Compact range**, covers motor currents from 3 to 105 A. It is the latest addition to the softstarter family and has an attractive, compact design. Further, the system concept includes MMS and the softstarters are available for remote control connection using the FieldBusPlug as an accessory. All sizes include a Run signal relay, while from sizes 25 A the PSR Softstarters are also provided with an output signal for TOR (Top Of Ramp), i.e. full voltage. With standard performance the PSR Softstarters handle ten starts per hour. When an auxiliary cooling fan is added, the starting capacity is increased to 20 starts per hour or more.

- Current ratings 3.9 – 105 A (1.5 - 55 kW), at 400 V
- Motor voltage 208 – 600 V
- Supply voltage 24 VDC or 100-240 VAC
- Easy to install and adjust
- DIN rail or screw mounting
- Integrated by-pass contacts

With their compact design, the PSR Softstarters are ideal for installation in places where space is limited and where there is a demand for easy installation.

### Settings

- ① Ramp time START = 1 ... 20 sec
- ② Ramp time STOP = 0 ... 20 sec
- ③ Initial voltage  $U_{ini}$  = 40 ... 70 % (also set "end voltage")

① See accessories on page 6.8.

① Above 40 °C up to max. 60 °C reduce the rated current with 0.8 % per °C.

② When used at high altitudes above 1000 meters up to 4000 meters you need to derate the rated current using the following formula.

$$[\% \text{ of } I_e = 100 - \frac{x - 1000}{150}]$$

x = actual altitude for the softstarter

PSR16	15.2	3	5	10	10	30 A J-Type
PSR25	24.2	7.5	7.5	15	20	40 A J-Type
PSR30	28	7.5	10	20	25	50 A J-Type
PSR37	34	10	10	25	30	60 A J-Type
PSR45	46.2	15	15	30	40	80 A J-Type
PSR60	52	20	20	40	50	100 A J-Type
PSR72	65	20	25	50	60	125 A J-Type
PSR85	77	25	30	60	75	150 A J-Type
PSR105	96	30	40	75	100	200 A J-Type

## Approximate dimensions PSR3 – PSR105

PSR3 ... 16

PSR37 ... 45

PSR60 ... 105

### Minimum distance to wall/front

PSR25 ... 30

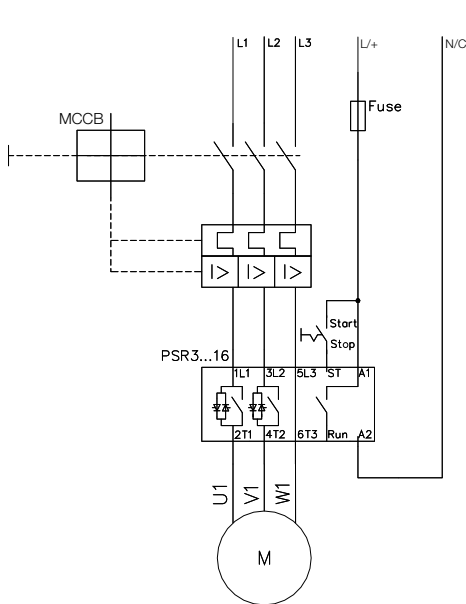

Softstarter, type	Dimensions					
	A	B	C	E	F	H
<b>PSR3 ... PSR105</b>						
PSR3 ... 16	25	0*	0	45	140	114
PSR25 ... 30	25	0*	0	45	160	128
PSR37 ... 45	25	0*	0	54	187	153
PSR60 ... 105	25	0*	0	70	220	180

# Circuit diagrams PSR3 – PSR105

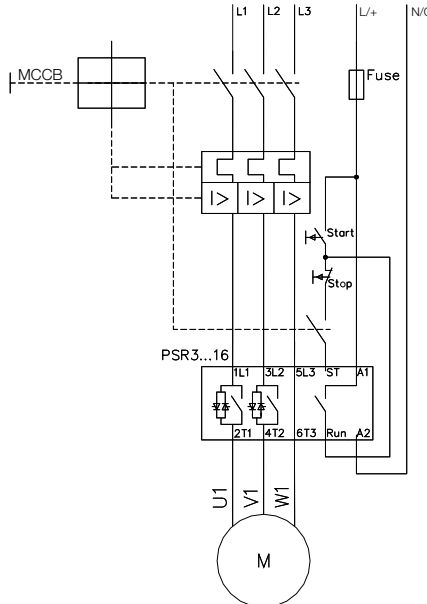

Softstarters  
Type PSR

## PSR3 ...16

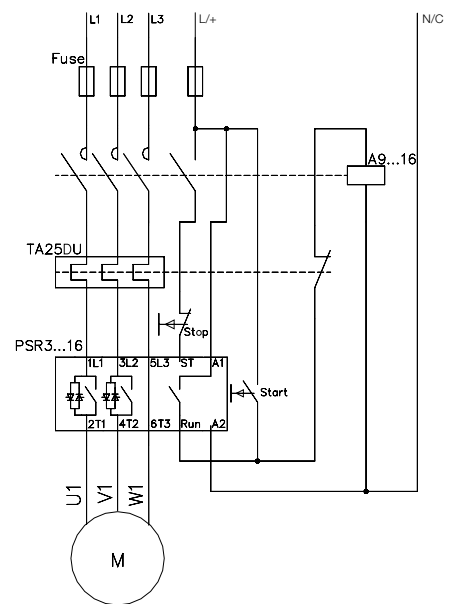

A) With MCCB

B) With MCCB and auxiliary contact

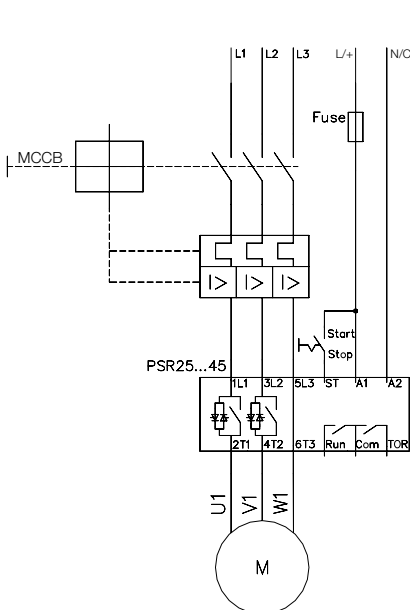

C) With fuses, contactor and O.L.

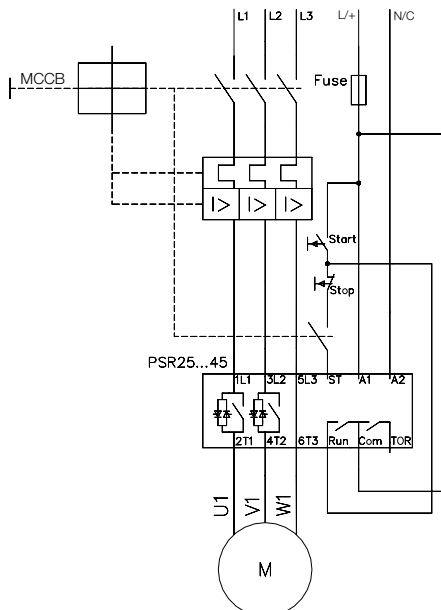

## PSR25 ... 45

D) With MCCB

E) With MCCB and auxiliary contact

F) With fuses, contactor and O.L.
