

Exclusive Promotional *offer*

Get started with Modicon M221 and Magelis HMISTU

Our Modicon M221 controller embeds all the features and functions you need to increase your bottom line. Designed for machines with hardwired controller architectures, it is one of the fastest and most compact controllers in its class. Transfer applications from old to new control platforms and reuse existing codes reducing development time. You can even batch-configure controllers right in the boxes delivered in.

Go one step further and handle all your programming, visualisation and commissioning with just one intuitive tool that is available as a free download - SoMachine Basic. A simplified engineering tool for the Modicon M221 controller and is the universal programming software for machines automated by MachineStruxure controllers.

To help equip you to quickly make a significant difference to your automated control systems, we offer a promotional starter pack that includes:

- > Modicon M221 Programmable Automation controller
- > Magelis HMISTU 5.7" touchscreen
- > Vijeo Designer and SoMachine configuration software
