Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

DANGER

indicates that death or severe personal injury **will** result if proper precautions are not taken.

WARNING

indicates that death or severe personal injury **may** result if proper precautions are not taken.

CAUTION

indicates that minor personal injury can result if proper precautions are not taken.

NOTICE

indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Trademarks

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Introduction

SIRIUS modular system

The SIRIUS modular system comprises devices for use in switching, starting, protecting, and monitoring, as well as combinations thereof.

Device	Performance range / adjustable current range
3RT contactors	3 ... 250 kW (P / AC-3 / 400 V)
3RH contactor relays	Switching in the control circuit
3RF solid-state switching devices	2.2 ... 7.5 kW (P / U _e / 400 V)
3RW soft starters	1.5 ... 250 kW (P / U _e / 400 V)
3RV motor starter protectors	0.11 ... 100 A
3RU thermal overload relays	0.11 ... 100 A
3RB electronic overload relays	0.1 ... 630 A
3RR current monitoring relays	1.6 ... 80 A

The devices named above are supplemented for the main circuit by devices for the control circuit: 3RA28 function modules for mounting on 3RT2 contactors and 3RA27 function modules for connection to the higher-level control.

Highlights

☐ Load feeders:	Up to 250 kW / 400 V ☐ Comprehensive variety of starter technologies: electromechanical, semiconductors, soft starters ☐ Short-circuit breaking capacity up to 150 kA
☐ Modular design:	Coordinated components ensure combinability
☐ Variants and sizes:	Economical and flexible with 7 sizes and a broader performance range
☐ Accessories:	Optimum variance with uniform accessories
☐ Type of construction:	Space-saving design with small device width and butt-mounting type of construction up to 60°C
☐ Setup:	Fast startup, short setting-up times, and simple wiring
☐ Communication:	Optional connection to AS-Interface or IO-Link with function modules
☐ Maintenance:	Extremely durable, low maintenance, and reliable
☐ Approvals:	Global approvals and certifications, such as UL, CSA, CCC, shipbuilding ...
☐ Mounting:	Permanently secure mounting, screw or snap fitting
☐ Spring-loaded connection technology:	Quick and secure connection, vibration-proof, and maintenance-free
☐ Environment:	Environment friendly production and materials, recycling capability, low power loss
☐ Design:	Clear-cut, ergonomic design (winner of the iF Product Design Award)

General information

General criteria for the selection of devices

The motor starter protectors, contactors, solid-state switching devices, soft starters and overload relays in the following tables are all specified in their basic versions with screw terminals, i.e. (in particular) without accessories. Where available, of course, versions with spring-loaded terminals or ring cable lug connections as well as accessories such as auxiliary switches, auxiliary trip units etc. can be used.

The contactors listed have a rated control supply voltage U_s of 230 V AC, 50 Hz. Versions with other voltages can also be used.

The 3RU21 thermal overload relay and the 3RB30 / 3RB31 electronic overload relays can be directly mounted onto the contactor. The 3RB22 / 3RB23 / 3RB24 electronic overload relay and the SIMOCODE pro 3UF7 motor protection and control device are essentially used for stand-alone installation. In their basic version, these devices are specified with a rated control supply voltage of 230 V AC.

Note

When designing a system, comply with all valid national installation specifications and standards.

Mounting the combinations

When mounting the devices, specific arcing spaces must be maintained so that short-circuits can be cleared safely and reliably. The appropriate installation guidelines can be found in Section Installation guidelines (Page 75).

The technical data of the individual devices must be taken into account when selecting a device.

400 V / 500 V / 690 V AC

The tables below are primarily structured for the 400 V, 500 V and 690 V line voltages for grounded networks (at 50 and 60 Hz) generally found in IEC regions.

Tests are carried out with a test voltage which lies 10% above these values (further details can be found in the test reports). Thus, the specified combinations can also be used for other networks as long as their maximum voltage does not exceed the test voltage. This means, for instance, the combinations for 400 V can also be used for 415 V networks that have a line supply tolerance of +5%.

The tables shown in this document are always based on certificates of compliance with the order and on test reports.

If more detailed information is required, these can be downloaded from the Siemens Industry Online Support (<https://support.industry.siemens.com/cs/ww/en/ps>) portal.

Ambient conditions

A maximum ambient temperature of 60°C applies to all electromechanical controlgear, and 40°C to soft starters and solid-state contactors. Higher temperatures are possible with derating. For details, refer to the System Manual or contact Technical Assistance.

A maximum installation height of 2000 m applies to electromechanical controlgear, and 1000 m to soft starters and solid-state contactors.

Higher installation altitudes are also possible with derating. For details refer to the appropriate manuals.

Trip classes

CLASS 5, CLASS 10, CLASS 20, CLASS 30 and CLASS 40

Trip classes, according to IEC 60947-4-1, define the time intervals within which the protection equipment (overload release of a motor starter protector or overload relay) must trip from the cold state, for a symmetrical, three-phase load with a 7.2-fold set current I_e .

The tripping times are as follows:

- CLASS 5 and CLASS 10 between 2 s and 10 s,
- CLASS 20 between 4 s and 20 s,
- CLASS 30 between 9 s and 30 s,
- CLASS 40 between 30 s and 40 s.

In practice, devices with trip CLASS 5 and CLASS 10 are generally used. These devices are designed for standard applications. CLASS 5 and CLASS 10 are often referred to as normal starting.

Combinations for CLASS 20, CLASS 30 and CLASS 40 are available for applications where a higher starting current is required for a prolonged period. In this case, using standard devices of CLASS 5 and CLASS 10 would result in unwanted tripping. CLASS 20, CLASS 30 and CLASS 40 are also known as heavy starting devices. Large fan motors are an example of this type of application.

As well as the overload protection devices, the contactors and short-circuit protection devices must also be designed for these long starting times. This is why combinations acc. to CLASS 5 and CLASS 10 are generally more cost-effective. CLASS 20, CLASS 30 and CLASS 40 are only generally used if genuinely necessitated by the application.

Type of coordination 1 or 2

When selecting the combinations, in many cases, either coordination type 1 or 2 can be selected. According to IEC 60947-4-1, the coordination type defines the permissible degree of damage for a device following a short-circuit.

☐ **Type of coordination 1:**

After a short-circuit, it is permissible for the starter to be inoperative, in particular, damage to the contactor, solid-state switching devices and overload relay is permissible.

☐ **Type of coordination 2:**

The starter is still operative. There must be no signs of damage to the devices, with the exception of slightly welded contactor contacts if these can be easily separated again without any noticeable deformation.

In both cases, the short-circuit is reliably and safely cleared. Combinations of coordination type 2 are therefore of a higher quality and are rapidly available for reuse after a short-circuit. In the case of solid-state switching devices, the same applies as for type of coordination 2, that the short-circuit is cleared without any damage to the power semiconductors. Combinations of coordination type 1 are generally the more favorably priced solution. Combinations of coordination type 2 automatically fulfill the requirements of coordination type 1.

Tests

All of the specified combinations are tested in compliance with IEC 60947-4-1.

With or without overload relay

In addition to the combinations comprising a motor starter protector (for motor protection) and contactor, combinations are also available with motor starter protector (for starter protection), contactor and overload relay.

In the first case, the motor starter protector assumes the dual function of overload protection and short-circuit protection, while in the second case, the motor starter protector assumes only the short-circuit protection function and the overload relay the overload protection function. The tripping behavior of both solutions under overload and short-circuit conditions is technically comparable.

For fuseless load feeders with electronic overload relays, and for higher trip classes, CLASS 20, CLASS 30 and CLASS 40 in particular, a motor starter protector is often used instead of an MSP for starter combinations. This is due to the following: from the point of view of thermal destruction limits, MSPs for starter combinations are generally designed for CLASS 10 motor starts. The current measurement of electronic overload relays usually moves into saturation upwards of a 10-fold rated current, so that the intrinsic protection of the motor starter protector is no longer guaranteed for higher trip classes. In order to ensure thermal intrinsic protection, it is advisable to use a motor starter protector/circuit breaker that protects itself over the overload release. The motor starter protector/circuit breaker is selected so that the point at which the characteristic curve of the overload relay intersects with the a-tripping characteristic of the motor starter protector/circuit breaker is more than 10 x the set current. This ensures that, in the case of motor faults, such as overload or blocking, the overload relay always trips and not the motor starter protector.

In this situation, combinations with motor starter protector and contactor offer the most cost-effective solution. However, combinations with overload relays offer distinct advantages for certain applications:

- 3RB30 / 3RB31 and 3RB22 / 3RB23 / 3RB24 electronic overload relays or SIMOCODE pro 3UF7 can be used to achieve not only trip CLASS 5 and CLASS 10 but also solutions for heavy starting, such as CLASS 20, CLASS 30, and CLASS 40.
- Using electronic overload relays offers a wide setting range of 1:4 or 1:10. This offers advantages during configuration (e.g. if the exact motor current is not known) and enables us to reduce the number of variants required.
- Overload and short-circuit protection are carried out separately and can also be signaled separately. Alternatively, the 3RV2921-1M signaling block can be used for the 3RV motor starter protector instead of the overload relay. This also supports the separate signaling of overloads and short-circuits.
- Setting of the overload relay to "Automatic Reset" can also save a walk to the control cabinet in the case of overload tripping, as a manual reset in the control cabinet is not required. Alternatively, this function can also be implemented with the "3RV21 motor starter protector with overload relay function". These devices can be used in the motor starter protector + contactor tables instead of the 3RV20 motor starter protector.

Star(wye)(Y)-delta function(Δ) starting

In order to keep the current peaks in the line supply as low as possible, contactor assembly are frequently used as star(wye)-delta starters to start three-phase motors. However, to make worthwhile use of Y Δ starting, a low load torque is required during starting. Only then can the motor approximately reach its rated speed in the Y stage before switching to Δ operation.

An overload relay should be used for motor overload protection. Normally, this is located directly in the motor feeder cable U1, V1, W1, as shown in the circuit diagram. Using this arrangement, the overload protection is effective in both the Y and Δ circuit. The overload relay should be set for 58% of the rated motor current.

Circuit diagram main circuit for Y Δ circuit

The control current wiring and switching from Y to Δ are implemented with plug-on function modules for the SIRIUS innovations. The switching time can be set between 1 and 100 s. The function modules thus perform the function of the timing relay.

In the tables, circuit breakers are used for starter combinations (without overload releases). However, 3RV20 motor starter protectors for motor protection with the same rated current can also be used instead. In this case, the rated motor current of the motor starter protector must be set to the maximum value. This prevents a simultaneous tripping of the motor starter protector and overload relay.

Soft starting with soft starters

What is the basic principle of a soft starter?

Soft starters limit the starting current and starting torque. This reliably prevents mechanical stress and mains voltage dips. The motor voltage is reduced using phase control and is increased from an adjustable starting voltage up to the mains voltage within a specific ramp time. Soft starting and stopping reduces the stress on connected equipment, thus ensuring prolonged smooth and trouble-free production.

- 3RW30 soft starters for the soft starting of three-phase asynchronous motors for simple applications
 - performance range: up to 55 kW at 400 V (75 hp at 460 V)
- 3RW40 soft starters with integrated functions; electronic motor overload and intrinsic device protection and adjustable current limiting
 - performance range: up to 250 kW at 400 V (300 hp at 460 V)
- The 3RW44 solid-state soft starters offer the following:
 - soft starting and stopping
 - electronic motor overload and intrinsic device protection
 - adjustable current limiting
 - numerous functions for higher-level requirements
 - performance range:
 - up to 710 kW at 400 V in standard circuit
 - up to 1200 kW at 400 V (1700 hp at 460 V) in the inside-delta circuit

More information can be found on the Internet (<http://www.siemens.com/softstarter>).

For the correct dimensioning of soft starters for motors with high starting current ratios ($I/I_e \geq 8$), we recommend our "Simulation Tool for Soft Starters (STS)":

- Download (<http://support.automation.siemens.com/WW/view/en/101494917>)
- Readme (<http://support.automation.siemens.com/WW/view/en/101494773>)

Load feeders with soft starters

Soft starters can also be used to prevent current peaks in the line supply instead of the star(wye)-delta starting combinations. Three versions of these soft starters are available:

- 3RW30
- 3RW40
- 3RW44

The 3RW4 soft starters come as standard with an integrated solid-state overload relay. This means that, in fuseless combinations, a motor starter protector is only required for short-circuit protection. In the case of 3RW30 soft starters, the motor starter protector must also cover the overload protection.

3RB22 / 23 / 24 overload relays and SIMOCODE pro

The modular, electronic overload relays with external power supply type 3RB22 / 23/ 24 for high-feature applications up to 630 A have been designed for inverse-time delayed protection of loads with normal and heavy starting against excessive temperature rises due to overload, phase unbalance or phase failure.

SIMOCODE pro is a flexible, modular motor management system for motors with constant speeds in the low-voltage performance range. It provides the intelligent, communication-capable interface between the higher-level automation system and the motor feeder.

A configuration with 3RB22 / 23 / 24 overload relays and with SIMOCODE pro requires in each case a basic unit, a connection cable, and a current measuring module. The article numbers of the current measuring modules are listed in the tables. Details of the basic units and connection cables are given in the following:

3RB22 / 23 / 24

- Basic unit (= evaluation module)
 - Monostable, screw: 3RB2283-4AA1
 - Bistable, screw: 3RB2383-4AA1
 - Monostable, spring-loaded: 3RB2283-4AC1
 - Bistable, spring-loaded: 3RB2383-4AC1
 - Monostable, screw: 3RB2483-4AA1
 - Monostable, spring-loaded: 3RB2483-4AC1
- Connection cable
 - 0.1 m (S00-S3): 3RB2987-2B
 - 0.5 m (S00-S12): 3RB2987-2D
- For other accessories for 3RB22 / 23 / 24 overload relays see Catalog IC 10 Chapter 7.

SIMOCODE pro

- **SIMOCODE pro C, Basic Unit 1**
PROFIBUS DP interface, 12 Mbit/s, RS485 4I / 3O freely assignable, input for thermistor connection, monostable relay outputs
 - 24 V DC: 3UF7000-1AB00-0
 - 110 ... 240 V AC / DC: 3UF7000-1AU00-0
- **SIMOCODE pro V, Basic Unit 2**
PROFIBUS DP interface, 12 Mbit/s, RS485 4I / 3O freely assignable, input for thermistor connection, monostable relay outputs, can be expanded by expansion modules
 - 24 V DC: 3UF7010-1AB00-0
 - 110 ... 240 V AC / DC: 3UF7010-1AU00-0
- **SIMOCODE pro C**
PROFIBUS DP interface, 12 Mbps, RS485 4I / 3O freely assignable, input for thermistor connection, monostable relay outputs
 - 24 V DC: 3UF7000-1AB00-0
 - 110 ... 240 V AC/DC: 3UF7000-1AU00-0
- **SIMOCODE pro S**
PROFIBUS DP interface, 15 Mbps, RS485 4I / 2O freely assignable, input for thermistor connection, monostable relay outputs, can be expanded by multifunction module
 - 24 V DC: 3UF7020-1AB01-0
 - 110 ... 240 V AC/DC: 3UF7020-1AU01-0
- **SIMOCODE pro V**
PROFIBUS DP interface, 12 Mbps, RS485 4I / 3O freely assignable, input for thermistor connection, monostable relay outputs, can be expanded by expansion modules
 - 24 V DC: 3UF7010-1AB00-0
 - 110 ... 240 V AC/DC: 3UF7010-1AU00-0

- SIMOCODE pro V PROFINET
ETHERNET/PROFINET IO, OPC UA server and web server, 100 Mbps, 2 x connection to bus through RJ45, PROFINET system redundancy, media redundancy protocol, 4 I/3 O freely assignable, input for thermistor connection, monostable relay outputs, can be expanded by expansion modules, web server in German/English/Chinese/Russian
 - 24 V DC: UF7011-1AB00-0
 - 110 ... 240 V AC/DC: 3UF7011-1AU00-0
- SIMOCODE pro V Modbus RTU
Modbus RTU interface, 57.6 Mbps, RS485 4I / 3O freely assignable, input for thermistor connection, monostable relay outputs, can be expanded by expansion modules
 - 24 V DC: 3UF7012-1AB00-0
 - 110 ... 240 V AC/DC: 3UF7012-1AU00-0
- Connection cable
 - 0.1 m, flat: 3UF7931-0AA00-0
 - 0.3 m, flat: 3UF7935-0AA00-0
 - 0.5 m, flat: 3UF7932-0AA00-0
 - 0.5 m, round: 3UF7932-0BA00-0
 - 1.0 m, round: 3UF7937-0BA00-0
 - 2.5 m, round: 3UF7933-0BA00-0
- For other accessories and software for SIMOCODE pro see Catalog IC 10 Chapter 10.

Note

The coordination tests with SIMOCODE pro current measuring modules 3UF710 apply to the same extent for current measuring modules / voltage measuring modules 3UF711.. of the same rated current range.

¹⁾ Take account of the operating voltage.

²⁾ Assignment and short-circuit protective devices acc. to IEC 60947-4-1

³⁾ Fuse links as specified in the table "BS88 fuse links (Page 74)" must be used for BS88 fuses.

⁴⁾ The thermal overload relay is only available for stand-alone installation.

⁵⁾ The specified data are valid for maximum 50 kA at 690 V.

3.4 Short-circuit protection: 3RT contactor, 3TF6 + 3RB3 electronic overload relay

Short-circuit protection with fuses for motor feeders with 3RB30 and 3RB31, contactor mounting, and stand-alone assembly

3.4 Short-circuit protection: 3RT contactor, 3TF6 + 3RB3 electronic overload relay

Environmental conditions

For the 3RB20 and 3RB21 electronic overload relays in the sizes S6, S10 and S12, the upper setting of the setting range must be reduced by a certain factor for ambient temperatures of > 50 °C.

Table 3- 12 Derating values for overload relay sizes S6 to S12

Overload relay	Overload relay Setting range	Configuration	
Article No.	[A]		
		Derating values for the upper setting of the setting range with stand-alone assembly and the following ambient temperature:	
		+ 50 °C	60 °C
3RB2056 / 3RB2153	50 ... 200	100 %	100 %

Installation guidelines

4.1 Mounting variants under different conditions and frequency of use

The load feeders can be mounted horizontally or vertically.

The following table shows the installation guidelines for the fuseless load feeders.

Table 4- 1 Mounting variants - fuseless load feeders with link module

Combination					
	Setting range				
		Distance between feeders			
			Permissible installation: h = horizontal, v = vertical		
			Max. ambient temperature T _a		
					Use under increased vibration and shock load ¹⁾
Motor starter protector and contactor	A	mm	h, v	°C	
Direct-on-line starter, screw terminal, DIN rail or base plate					
S00	≤ 14	0	h, v	60	Unlimited
	> 14 ... 16	10	h	60	
		0	h, v	40	
S0	≤ 29	0	h, v	60	Unlimited
	> 29 ... 32	10	h	60	
		0	h, v	40	
S2	≤ 65	0	h, v	60	Unlimited
S3 (with DIN rail adapter 3RA2942-1AA00 only)	≤ 87	0	h, v	60	On request
	> 87 ... 100	0	h, v	40	

4.1 Mounting variants under different conditions and frequency of use

Combination					
	Setting range				
		Distance between feeders			
			Permissible installation: h = horizontal, v = vertical		
				Max. ambient temperature T _a	
					Use under increased vibration and shock load ¹⁾
Motor starter protector and contactor	A	mm	h, v	°C	
Direct-on-line starter, screw terminal, busbar					
S00	≤ 14	0	h	40	Vibration and shock kit 8US1998-1CA10 required
		10	h	60	
		10	v	40	
	> 14 ... 16	10	h	60	
		10	h, v	40	
S0	≤ 29	0	h	40	Vibration and shock kit 8US1998-1CA10 required
		10	h	60	
		10	v	40	
	> 29 ... 32	10	h	60	
		10	h, v	40	
S2	≤ 65	10	h, v	60	Vibration and shock kit 8US1998-1DA10 required
	≤ 65	0	h, v	40	Vibration and shock kit 8US1998-1DA10 required
Reversing starter, screw terminal, DIN rail or base plate					
S00	≤ 14	0	h, v	60	Unlimited
	> 14 ... 16	10	h	60	
		0	h, v	40	
S0	≤ 29	0	h, v	60	DIN rail adapter required (already included with 3RA22)
	> 29 ... 32	10	h	60	
		0	h, v	40	
S2	≤ 65	0	h, v	60	Unlimited
S3 (with DIN rail adapter 3RA2942-1AA00 only)	≤ 87	0	h, v	60	On request
	> 87 ... 100	0	h, v	40	

4.1 Mounting variants under different conditions and frequency of use

Combination					
	Setting range				
		Distance between feeders			
			Permissible installation: h = horizontal, v = vertical		
				Max. ambient temperature T _a	
					Use under increased vibration and shock load ¹⁾
Motor starter protector and contactor	A	mm	h, v	°C	
Reversing starter, screw terminal, busbar					
S00	≤ 14	0	h	60	Vibration and shock kit 8US1998-1CA10 required
		0	v	40	
	> 14 ... 16	10	h	60	
		10	v	40	
S0	≤ 29	0	h	60	Vibration and shock kit 8US1998-1CA10 required
		0	v	40	
	> 29 ... 32	10	h	60	
		10	v	40	
S2	≤ 65	10	h, v	60	Vibration and shock kit 8US1998-1DA10 required
	≤ 65	0	h, v	40	Vibration and shock kit 8US1998-1DA10 required
Direct-on-line starter, spring-loaded connection, DIN rail or base plate					
S00	≤ 14	0	h, v	60	Unlimited
	> 14 ... 16	10	h	60	
		0	h, v	40	
S0	≤ 29	0	h, v	60	Unlimited
	> 29 ... 32	10	h	60	
		0	h, v	40	
Direct-on-line starter, spring-loaded connection, busbar					
S00	≤ 14	0	h	40	Vibration and shock kit 8US1998-1CA10 required
		10	h	60	
		10	v	40	
	> 14 ... 16	10	h	60	
		10	v	40	
S0	≤ 29	0	h	40	Vibration and shock kit 8US1998-1CA10 required
		10	h	60	
		10	v	40	
	> 29 ... 32	10	h	60	
		10	v	40	

4.1 Mounting variants under different conditions and frequency of use

Combination					
	Setting range				
		Distance between feeders			
			Permissible installation: h = horizontal, v = vertical		
				Max. ambient temperature T _a	
					Use under increased vibration and shock load ¹⁾
Motor starter protector and contactor	A	mm	h, v	°C	
Reversing starter, spring-loaded connection, DIN rail or base plate					
S00	≤ 14	0	h, v	60	Unlimited
	> 14 ... 16	10	h	60	
		0	h, v	40	
S0	≤ 29	0	h, v	60	DIN rail adapter required (already included with 3RA22)
	> 29 ... 32	10	h	60	
		0	h, v	40	
Reversing starter, spring-loaded connection, busbar					
S00	≤ 14	0	h	60	Vibration and shock kit 8US1998-1CA10 required
		0	v	40	
	> 14 ... 16	10	h	60	
		10	v	40	
S0	≤ 29	0	h	60	Vibration and shock kit 8US1998-1CA10 required
		0	v	40	
	> 29 ... 32	10	h	60	
		10	v	40	
Motor starter protector and soft starter, screw terminal, DIN rail or base plate					
S00	16	2)		2)	The feeder must be screwed tight to the top of the motor starter protector with two screws and fastened to the bottom of the soft starter with a self-locking screw. Not approved for railways, power plants, or shipbuilding.
S0	32	2)		2)	The feeder must be screwed tight to the top of the motor starter protector with two screws and fastened to the bottom of the soft starter with a self-locking screw. Not approved for railways, power plants, or shipbuilding.
S2 (only with DIN rail adapter 3RA2932-1CA00)	65	2)	2)	2)	Unlimited
S3 (on base plate only)	On request				

4.1 Mounting variants under different conditions and frequency of use

Combination					
	Setting range				
		Distance between feeders			
			Permissible installation: h = horizontal, v = vertical		
				Max. ambient temperature T _a	
					Use under increased vibration and shock load ¹⁾
Motor starter protector and contactor	A	mm	h, v	°C	
Motor starter protector and soft starter, spring-loaded terminal, DIN rail or base plate					
S00	16	²⁾		²⁾	The feeder must be screwed tight to the top of the motor starter protector with two screws and fastened to the bottom of the soft starter with a self-locking screw. Not approved for railways, power plants, or shipbuilding.
S0	32	²⁾		²⁾	The feeder must be screwed tight to the top of the motor starter protector with two screws and fastened to the bottom of the soft starter with a self-locking screw. Not approved for railways, power plants, or shipbuilding.
Motor starter protector and solid-state contactor, screw terminal, DIN rail or base plate					
Direct-on-line starters (sizes S00 / S0)	16	²⁾		²⁾	Unlimited Not approved for railways, power plants, or shipbuilding.
Reversing starters (sizes S00 / S0)	7.4	²⁾		²⁾	Unlimited Not approved for railways, power plants, or shipbuilding.
¹⁾ Vibration and shock tests are carried out in accordance with SN 31205 as well as with the relevant standards for railways, shipbuilding, and power plants. ²⁾ Please consult Technical Assistance (http://www.siemens.com/sirius/technical-assistance).					

4.2 Minimum clearances to grounded or live parts (400 V / 500 V / 690 V AC)

Maintain the following clearances when mounting the 3RA21 / 3RA22 assemblies:

Table 4- 2 Installation guidelines for 400 V / 500 V / 690 V AC (size S00 / S0)

Clearance from grounded or live parts as well as from molded-plastic cable ducts according to IEC 60947-4				
Motor starter protector	Contactor	Y [mm]	X2 ¹⁾ [mm]	Z [mm]
Rated operating voltage 400 V				
3RV2.1	3RT201	20	10	9
3RV2.2	3RT201	30	10	9
	3RT2.2	30	10	9
Rated operating voltage 500 V				
3RV201 3RV211	3RT201	20	10	9
3RV202 3RV212	3RT202	30	10	20
3RV202 + limiter (32 A) 3RV212 + limiter (32 A)	3RT202	30	10	9

4.2 Minimum clearances to grounded or live parts (400 V / 500 V / 690 V AC)

Clearance from grounded or live parts as well as from molded-plastic cable ducts according to IEC 60947-4				
Rated operating voltage 690 V				
3RV2.1	3RT201	50	10	20
3RV2.1 / 3RV2.2 + limiter (32 A)	3RT201 / 3RT202	80	10	20
3RV2.1 / 3RV2.2 + limiter (50 A)	3RT202	50	10	20

- 1) Minimum clearance from contactor at the front. There is no minimum clearance requirement at the front for the motor starter protector.

Note

Installation instructions for S0 motor starter protectors from 36 A

Minimum cable length between motor starter protector and contactor: 150 mm.

Minimum clearance between motor starter protector and contactor: 100 mm.

4.2 Minimum clearances to grounded or live parts (400 V / 500 V / 690 V AC)

Table 4- 3 Installation guidelines for 400 V / 500 V / 690 V AC (size S2)

Clearance from grounded or live parts as well as from molded-plastic cable ducts according to IEC 60947-4						
Motor starter protector	Contactors	Y1 [mm]	Y2 [mm]	X1 [mm]	X2 [mm]	Z [mm]
Rated operating voltage 400 V						
3RV2.3	3RT203	50	10	---	10	10
Rated operating voltage 500 V						
3RV203 3RV213	3RT203	20	10	---	10	9
3RV203 + limiter (80 A) 3RV213 + limiter (80 A)	3RT203	50	10	---	10	10
Rated operating voltage 690 V						
3RV2.32 + limiter (80 A)	3RT203	50	10	10	32	10

4.2 Minimum clearances to grounded or live parts (400 V / 500 V / 690 V AC)

Table 4- 4 Installation guidelines for 400 V / 500 V / 690 V AC (size S3)

Clearance from grounded or live parts as well as from molded-plastic cable ducts according to IEC 60947-4						
Motor starter protector	Contactor	Y1 [mm]	Y2 [mm]	X1 [mm]	X2 [mm]	Z [mm]
Rated operating voltage 400 V						
3RV2.4	3RT204	On request				
Rated operating voltage 500 V						
3RV2.4	3RT204	On request				
3RV2.4 + limiter (80 A)	3RT204	On request				
Rated operating voltage 690 V						
3RV2.42 + limiter (80 A)	3RT204	On request				

The diagram illustrates the required clearances for motor starter protectors and contactors. It is divided into two main sections: a front view on the left and a side view on the right.

Front View (Left): Shows two vertical assemblies. The top assembly is labeled "3RV2..." and features three terminal circles at the top (1L1, 3L2, 5L3) and three at the bottom (2T1, 4T2, 6T3), with a central switch symbol. The bottom assembly is labeled "3RT2..." and features three terminal circles at the top (1L1, 3L2, 5L3) and three at the bottom (2T1, 4T2, 6T3), with three solid squares below. Dimensions are indicated: "Z" for the horizontal clearance from the left and right boundaries, "Y1" for the vertical clearance from the top boundary, and "Y2" for the vertical clearance from the bottom boundary. Grounding symbols (a circle with a cross) are shown on the left and right boundaries.

Side View (Right): Shows the same two assemblies from a side perspective. The top assembly is labeled "3RV2..." and the bottom one "3RT2...". Dimension "X1" indicates the horizontal clearance from the right boundary to the side of the top assembly. Dimension "X2" indicates the horizontal clearance from the right boundary to the side of the bottom assembly. Grounding symbols are shown on the left and right boundaries.

Service and support

5.1 Siemens Industry Online Support

Information and Service

In Siemens Industry Online Support, you can obtain up-to-date information from our global support database quickly and simply. To accompany our products and systems, we offer a wealth of information and services that provide support in every phase of the lifecycle of your machine or plant – from planning and implementation, through commissioning, up to maintenance and modernization:

- Product support
- Application examples
- Services
- Forum
- mySupport

Link: Siemens Industry Online Support (<https://support.industry.siemens.com/cs/ww/en/>)

Product support

You will find here all the information and comprehensive know-how covering all aspects of your product:

- **FAQs**
Our answers to frequently asked questions.
- **Manuals/operating instructions**
Read online or download, available as PDF or individually configurable.
- **Certificates**
Clearly sorted according to approving authority, type and country.
- **Characteristic curves**
For support in planning and configuring your system.
- **Product announcements**
The latest information and news concerning our products.
- **Downloads**
You can find here updates, service packs, HSPs and much more for your product.

- **Application examples**

Function blocks, background and system descriptions, performance statements, demonstration systems, and application examples, clearly explained and represented.

- **Technical data**

Technical product data for support in planning and implementing your project.

Link: Product support (<https://support.industry.siemens.com/cs/ww/en/ps>)

mySupport

With "mySupport", your personal workspace, you get the very best out of your Industry Online Support. Everything to enable you to find the right information every time.

The following functions are now available:

- **Personal messages**

Your personal mailbox for exchanging information and managing your contacts

- **Inquiries**

Use our online form for specific solution suggestions, or send your technical inquiry directly to a specialist in Technical Support

- **Notifications**

Make sure you always have the latest information - individually tailored to your needs

- **Filters**

Simple management and re-use of your filter settings from Product Support and the Technical Forum

- **Favorites / Tags**

Create your own knowledge database by assigning "Favorites" and "Tags" to documents – simply and efficiently

- **Entries last viewed**

Clear presentation of your last viewed entries

- **Documentation**

Configure your individual documentation from different manuals – quickly and without complications

- **Personal data**

Change personal data and contact information here

- **CAX data**

Simple access to thousands of items of CAX data such as 3D models, 2D dimension drawings, EPLAN macros and much more

SIEMENS Industry Support App

DataMatrix codes primarily enable extremely fast and convenient access to all device-specific information relating to an article number in the SIEMENS Service&Support Portal, such as operating instructions, manuals, data sheets, FAQs, etc.

We provide the SIEMENS Industry Support app free of charge for this purpose and it can be used on most commercially available smart phones and tablets.

The SIEMENS Industry Support app is available for iOS and Android-based devices. You can download the app from the following links:

Link for Android

Link for iOS

Link for Windows Phone

5.2 SIRIUS Innovations system configurator

Reference

To assist you with configuration, the "SIRIUS Innovations system configurator" is at your disposal on the Internet. Here, you can gather together all necessary products before the actual configuration process and you can realize complete projects virtually.

You can find the "SIRIUS Innovations system configurator" on the Internet (<http://www.siemens.com/sirius/configurators>).

Up-to-the-minute information

You can obtain further assistance by calling the following numbers:

Technical Assistance:

Telephone: +49 (911) 895-5900 (8 a.m. to 5 p.m. CET)

Fax: +49 (911) 895-5907

or on the Internet at:
