RS Pro Steel Grey Long Span Beam x 2400mm

Product Details

Longspan Racking System

The Longspan system is recommended for storing heavy and bulky items. The high quality, heavy duty steel box beams and endframes form a rigid structure without the need for nuts and bolts.

Beams clip into place and can easily be adjusted to different heights.

Locking clips help prevent accidental dislodgement and ensure a secure seat for the beams.

Shelf panels are easily slotted in across the beams.

1800W beams can load up to 767kg and 2400W beams can load up to 469kg per shelf.

The endframes are finished in epoxy powder coated graphite grey.

The beams are finished in light grey.

Pre-galvanised steel shelves.

ENGLISH

Product Details

Starter bay requires: 2 endframes, a pair of beams per level, 2 pairs of feet and steel shelf panels 3 packs of 2 shelf panels are required for the 1800mm wide bay and 4 packs for the 2400mm wide bay)

Extension bay requires: 1 endframe, 1 pair of feet plus the appropriate number of shelf panels and beams

Note

Endframes do not have a length dimension as they attach to the main shelving

Racking Systems

Specifications:

System	Long Span
Component Type	Beam
Load Capacity	472kg
Width	2400mm
Material	Steel
Colour	Grey
