Product Details

1511003 Mobase Stand

With the new Mobase stand, (1511-003) Mobilux® LED hand-held magnifiers can be used as a stand magnifier. This Mobase stand is specifically designed to fit the following Mobilux Hand-held Magnifiers: 1511-7.

There are 3 positions to choose from: used in the upright position, the user has both hands free to work behind the lens, such as soldering or inspecting fine detail.

When used in the flat position, users can easily slide their Mobilux hand-held magnifier over the reading material.

By utilising the ¼" thread incorporated in to this unit, the stand enables the user to screw in a flexible tripod

Each of the 4 Mobase stands has unique specifications that guarantee the correct viewing distance for every Mobilux® LED hand-held magnifier. It's quick and easy to insert the Mobilux® LED into the Mobase stand and users can change over to using the magnifier as a hand-held device at any time.
