Note 4) Face seal type One-touch fittings cannot be used.

⚠ Caution

- Be sure to read this before handling the products.
- Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

Application Example

1. Relief regulator (Rapid tank internal pressure setting)

(Relieving type regulator e.g. AR2000)

2. Air blow (As 2 port directional control regulator valve)

(AR2000, etc.)

3. Constant pressure supply and driving (As 3 port directional control regulator valve)

Note) The pressure is about 0.01 MPa when OFF because of leakage.

4. Balance and driving

5. 2 steps directional control setting

6. Multiple steps pressure control (Toward stepless control)

⚠ Caution

- When the VEX outlet side capacity is small, install a speed controller AS2000, in the pilot pipe to lower the pilot pressure for vibration prevention. (Meter-in)

⚠ Caution ((5) 2 steps directional control setting, (6) multiple steps pressure control setting)

- Relieving type regulator such as AR2000, etc. should be used as pilot regulator in the application. (When the non-relieving type is used, pressure cannot be changed from high to low.)
- A sensitive regulator such as the ARP30, etc. should be used as a pilot regulator on the low pressure side, particularly with 5. 2 steps directional control setting and 6. multiple steps pressure control. (Using a non-sensitive regulator may cause unstable pressure.)

Flow Rate Characteristics

Setting Pressure Characteristics

Port P1 pressure is set according to port 2 (A) pressure.

External Pilot Piping

Note 1) Port P2 is not compatible with VEX1□00.

Note 2) A silencer is mounted to port P2 for VEX1 3/5/7/9 01 as a standard. For the 2 steps directional control and multiple steps pressure control setting, use the product after removing a silencer.

Pressure Characteristics

Shows the outlet pressure (Port 2 (A)) change against the inlet pressure (Port 1 (P)) change. They conform to JIS B 8372 (Air pressure regulator).

VEX110□ / 120□

VEX130□

VEX150□

VEX170□

VEX190□

Relief Time

1. Relief time from 0.5 MPa to 0.1 MPa

2. Relief time from 1000 L tank

3. Relief time from an arbitrary pressure

[Example] VEX 1500 lowers 2000 L tank from 0.4 MPa to 0.1 MPa:

- a) In graph 2.
-
- b) The relief time for the 2000 L tank is found by conversion as shown below.
- $$t = \frac{\text{Tank capacity}}{1000} \times \left[\text{Relief time that is read} \right]$$
- $$= \frac{2000}{1000} \times 23$$
- $$= 46$$
- The result is 46 s.

From above, the relief time is
26 - 3 = 23 s

Construction/Working Principle/Component Parts

(1) When Port 2 (A) pressure is high
Relief exhausting

(2) Setting pressure condition

(3) When Port 2 (A) pressure is low
Pressure reducing supply

- The balance between the acting force F_1 of the pilot pressure (port P1) over the upper surface of the pressure regulating piston ③ and the acting force F_2 of the pressure at port 2 (A) leading to a space under the piston through the feed back flow root closes a couple of poppet valves ⑥ and sets port 2 (A) pressure that corresponds to port P1 pressure. The poppet valves are backed up by spring ④ - in the pressure balance structure by means of port 2 (A) pressure. (DRW (2))
- When port 2 (A) pressure exceeds port P1 pressure, F_2 becomes larger than F_1 , and the pressure regulating piston moves upward, opening the upper poppet valves. Thus air is released from port 2 (A) to port 3 (R) (DRW (1)). When port 2 (A) pressure lowers enough to restore the balance with port P1 pressure, the regulator valve returns again to the DRW (2) condition.
- When port 2 (A) pressure is lower than port P1 pressure, F_1 becomes larger than F_2 , and the pressure regulating piston moves downwards, opening the lower poppet valves. Thus air is supplied from port P1 to port 2 (A) (DRW (3)). When port 2 (A) pressure rises enough to restore the balance with port P1 pressure, the regulator valve returns again to the DRW (2) condition.

Power Valve: 3 Position Valve

VEX3 Series

The body sizes 12/22/32/42 have been remodeled. For details, refer to page 1721.

Realise a variety of circuits using simple components.

Intermediate and emergency stops of large-sized cylinders

Intermediate and emergency cylinder stops

The 3 position closed centre valve produces a simple and large capacity system.

- A large capacity system without connection loss.

$\frac{1}{1} = \frac{1}{0.71}$ (Valves and piping can be made smaller.)

Terminal deceleration and an intermediate speed change circuit can be produced easily.

The simple system configuration permits sharp response. The large capacity system configuration without connection loss allows the use of smaller valves and piping.

- For example, when solenoid (b) of valve (A) is turned off while the cylinder is extending, the exhaust port closes and cylinder movement decelerates.

Universal porting could be used as a selector/divider valve

The pressure balancing poppet valve that permits any flow direction allows sequential switching operation, preventing blow by and air entrainment.

Two-stage directional control selection

System configuration when using VEX

Current system configuration

- There were not many suitable large capacity 5 support valves available with a 3 position closed centre.
- There were not many suitable 2-port valves for stopping.

Vacuum suction and release

The 3 port, 3 position double solenoid that permits vacuum suction, release, and suspension (closed) is ideal for a system where many valves are used.

- There is no blow-by when switched from vacuum suction to vacuum release or vice versa.

Caution

- When maintaining the vacuum of port 2 (A), the vacuum may decrease due to leakage from the vacuum pad or piping. Conduct vacuum suction at the vacuum adsorption position. Furthermore, it cannot be used as an emergency cutoff valve.

For operation control of double acting cylinders

Two power valves driven by a double acting cylinder allows operation control in 9 positions (3 positions x 3 positions = 9 positions) including slow stopping, acceleration, and deceleration.

Caution

- This valve is not a non-leak specification, and thus cannot be used for long term intermediate stops or emergency stops.

Please assume the chart is offered as the guideline. For details about various each condition, please make use of SMC Model Selection Software and then decide it.

Cylinder Speed Chart

* When the cylinder is extended, the speed controller is metered-out, is connected with the cylinder directly, and its needle is fully open.

* Values on the average velocity of a cylinder are obtained from the stroke length divided by full stroke time.

* Load proportion is ((load weight x 9.8)/theoretical force) x 100 %

VEX3 Series

* When the cylinder is extended, the speed controller is metered-out, is connected with the cylinder directly, and its needle is fully open.

* Values on the average velocity of a cylinder are obtained from the stroke length divided by full stroke time.

* Load proportion is ((load weight x 9.8)/theoretical force) x 100%

⚠ Caution

●VEX3₄2₂¹(Solenoid)

When the VEX3240 air operated power valve is delivered from our factory, the M5 threaded pilot port P2 in the cover is open and the 1/8 pilot port in the sub-plate is plugged. When port P2 on the body^{Note)} is used as a pilot exhaust port, remove the 1/8 plug and put the M5 plug into the pilot valve port P2 to cover it.

⚠ Caution

How to Use Plug Connector/Applicable Model: VEX312₁/322₁/332₁/342₁

Attaching/Detaching of a plug

1. To install the connector

Push the connector straight on the pins of the solenoid, making sure the lip of the lever is securely positioned in the groove on the solenoid cover.

2. To deinstall the connector

Press the lever against the connector and pull the connector away straight from the solenoid.

Crimping lead wire and socket

Peel 3.2 to 3.7 mm of the tip of the lead wire, enter the core wires neatly into a socket and press contact it with a press tool. Be careful so that the cover of lead wire does not enter into the core press contacting part. (Please contact SMC for the dedicated crimping tools.)

Attaching/Detaching of a socket with lead wire

1. Attaching

Insert a socket into the square hole (indicated at +, -) of connector, push fully the lead wire and lock by hanging the hook of a socket to the seat of connector. (Pushing in can open the hook and lock it automatically.) Then confirm the locking by lightly pulling on the lead wire.

2. Detaching

For pulling out a socket from connector, pull out the lead wire while pushing the hook of a socket with a stick with a fine point (1 mm). If a socket is to be re-used as it is, return the hook to the outside.

Base Mounted: VEX322□

VEX3 Series Manifold Specifications

Manifold: VVEX Series

Specifications

Model		VVEX2	VVEX4		
Applicable valve		VEX3220/VEX3222	VEX3420/VEX3422		
Valve stations (Note)		2 to 8	2 to 6		
Port specifications		Common SUP, EXH			
Pilot type		Internal pilot, Common external pilot			
Common external pilot port size		M5 x 0.8 Length of thread 5			
Port size	1 (P)	1/4	3/8	3/8	1/2
	3 (R)		1/4	3/8	3/8
	2 (A)				
Applicable blanking plate		VEX1-17 (With gasket, screw)	VEX4-5 (With gasket, screw)		

Note) When VVEX2 series is used with more than 5 stations, or VVEX4 series is used with more than 4 stations, apply pressure to the port 1 (P) on both sides and exhaust from the port 3 (R) on both sides.

Common External Pilot Piping

VVEX2-2

VVEX4-2

How to Order Manifold Base

VVEX 2-1-6-02

Body size		Pilot type		Valve stations		Port size		Thread type	
Body size	Pilot type	Applicable valve	Valve stations	Port	1 (P)	3 (R)	2 (A)	Thread type	
2	1	Internal pilot	2	2	02	1/4		—	Rc
	2	Common external pilot	6	6				N	NPT
			8	8				F	G
			6	6				T	FNPT

Note) Air operated

VEX 3220 and VEX3420 (air operated) are used. Distinction between the pilots (internal or external pilot) of the manifold base does not matter. Either may be used.

Example for ordering a manifold base:

The valve and blank plate for manifold arrangement should be specified in order from the left side of the manifold base (with the port 2 (A) on your side). (Example)

VVEX2-2-7-02N
 *VEX3222-1LN 6 pcs. } Solenoid
 *VEX1-17 1 pc.
 VVEX4-2-6-A
 *VEX3420 5 pcs. } Air operated
 *VEX4-5 1 pc.

VEX3 manifold (Size 2, 4) Pilot type

Manifold pilot type	Manifold part no.	Applicable valve part no.	Operating pressure range	Pilot pressure range
Air operated type	VVEX□-□-□-□	VEX3220/VEX3420	Low vacuum to 1.0 MPa	0.2 to 1.0 MPa
Internal pilot type	VVEX□-1-□-□	VEX3222/VEX3422	0.2 to 0.7 MPa	—
Common external pilot type	VVEX□-2-□-□	VEX3222/VEX3421/VEX3422	Low vacuum to 1.0 MPa	0.2 to 0.7 MPa
Individual external pilot type	VVEX□-□-□-□	VEX3221		

Note) If external pilot types are used, the common external pilot type is recommended.

Manifold: VVEX2-□

Manifold: VVEX4-□

VVEX4-1 Applicable valve: VEX3420/3422

VVEX4-2 Applicable valve: VEX3420/3422

Valve mounting side

L Dimension $L_1 = 46n + 31$, $L_2 = 46n + 15$ n: Station

L	n	2	3	4	5	6
L1		123	169	215	261	307
L2		107	153	199	245	291

Construction/Working Principle/Component Parts

- This is a 3 port switch valve in which the shaft ⑦ - extending from the driving piston ③ opens/closes a pair of poppet valves ⑥. The poppet valve has a pressure balancing mechanism in which port 2 (A) pressure is constantly applied from the back and the centre spring ④ is acting as a backup.
- When neither the pilot solenoid valve "a" nor "b" are energized (or when air is exhausted both from the port 12 (P1) and 23 (P2) of the air operated type), no force will act on the working piston, and the spring closes the poppet valve, thus the valve assumes the closed centre position (DRW (2)).
- When the pilot solenoid valve "a" is energized (or when pressurized air enters through the port 12 (P1) of the air operated type), pilot air that enters the space above the working piston pushes down the piston and opens the lower poppet valve, thus connecting the port 1 (P) and port 2 (A) (DRW (3)). The upper poppet valve continues to close the port 3 (R) by means of pressure balance and the spring.
- When the pilot solenoid valve "b" is energized (or when pressurized air enters through the port 23 (P2) of the air operated type), the pilot air that enters the space under the working piston pushes the piston upward and opens the upper poppet valve, thus connecting the port 2 (A) and port 3 (R) (DRW (1)). The lower poppet valve continues to close the port 1 (P) by means of pressure balance and the spring.

VEX3120 (Air operated)

VEX3220 (Air operated)

VEX3 Series Specific Product Precautions

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions.

Connectors for the VEX3 Series Body Sizes 12, 22, 32 and 42
(For connectors for body sizes 50, 70, and 90, refer to VT307 series.)

Plug Connector Lead Wire Length

⚠ Caution

The standard length of a plug connector with lead wire is 300 mm, but the following lengths are also available.

How to Order Connector Assembly

DXT170-80- A-

Lead wire colors

Symbol	Lead wire with socket	Note
—	Socket only (2 pcs.)	Without lead wire
1	Blue (2 pcs.)	For 100 VAC
2	Red (2 pcs.)	For 200 VAC
3	Grey (2 pcs.)	For other VAC
4	Red: +, Black: -	For DC

Lead wire length

Symbol	Lead wire length (L mm)
—	300
6	600
10	1000
15	1500
20	2000
25	2500
30	3000

How to Order

Specify the connector assembly part number together with the part number for the plug connector's solenoid valve without connector.
Note) The solenoid valve and the connector assembly are shipped separately.

Connector Assembly with Cover

⚠ Caution

Connector assembly with protective cover enhances dust protection.

- Effective to prevent short circuit accidents due to penetration of foreign matter into the connector part.
- Cover material adopts the chloroprene rubber which is excellent in weather ability and electric insulation properties. However, use caution not to splash cutting oil, etc. onto it.
- Simple and unencumbered appearance by adopting a round-shaped cord.

How to Order

DXT170-123-A-

Lead wire length

Symbol	Lead wire length (L mm)

10	1000
15	1500
20	2000
25	2500
30	3000

Connector assembly with cover: Dimensions

How to Use DIN Connector

⚠ Caution

Wiring

- 1) Loosen the set screws and pull out connector from the terminal block of solenoid valve.
- 2) Pull out screws and insert a screwdriver to the slit area near the bottom of terminal block to separate the terminal block and housing.
- 3) Loosen the terminal screws (slotted screws) on the terminal block, insert the core of the lead wire into the terminal in accordance with the wiring method, and secure with the terminal screws.
- 4) Tighten the ground nut to secure the cord.

Change of electrical entry

After separating the terminal block and housing, the cord entry direction can be changed by attaching the housing in the desired direction (4 directions in 90° increments).

* When equipped with light, avoid damaging the light with lead wire.

Caution

Plug a connector in or out vertically, never at an angle.

Applicable cables

Cord O.D.: $\varnothing$ 3.5 to $\varnothing$ 7

(Reference) 0.5 mm² 2-core and 3-core wires equivalent to JIS C 3306.

Ground nut

Tightening torque

1.65 to 2.5 N·m

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) ¹⁾, and other safety regulations.

Danger:

Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

Warning:

Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

Caution:

Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

- 1) ISO 4414: Pneumatic fluid power – General rules and safety requirements for systems and their components.
ISO 4413: Hydraulic fluid power – General rules and safety requirements for systems and their components.
IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1: Robots.
etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Our products cannot be used beyond their specifications. Our products are not developed, designed, and manufactured to be used under the following conditions or environments.

Use under such conditions or environments is not covered.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, fuel equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogues and operation manuals.
3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

Caution

We develop, design, and manufacture our products to be used for automatic control equipment, and provide them for peaceful use in manufacturing industries.

Use in non-manufacturing industries is not covered.

Products we manufacture and sell cannot be used for the purpose of transactions or certification specified in the Measurement Act.

The new Measurement Act prohibits use of any unit other than SI units in Japan.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first. ²⁾ Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty.
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Safety Instructions

Be sure to read “Handling Precautions for SMC Products” (M-E03-3) before using.
