Instruction Manual FH

intervals within the scope of quality assurance. For this purpose, the answerable user must define a suitable interval as well as the nature and scope of this check. Information is available on the home page (www.KERN-sohn.com) with regard to the monitoring of instrument test substances and the test weights required for this. Test weights and instruments can be adjusted quickly and at a reasonable price in KERN's accredited DKD calibration laboratory (return to national normal).

Fundamental safety information

Do not use the hanging instrument to transport loads. Prevent jolts, torsion and oscillation (e.g. by appending singly) of all kinds. Never use the hanging instrument over the maximum permitted weight (!Danger of breaking!). Always make sure that there are no living beings or materials below the load that could be injured or damaged. The hanging electronic instruments from the SAUTER instrument are only suitable for hand-held use or use in a test stand. They are not suitable for hanging from a mechanical hook, e.g. a crane hook.

Observe the information in the operating instructions. Please read the operating instructions carefully before setting up and commissioning, even if you already have gained experience with SAUTER instruments.

Training

The device may only be operated and looked after by trained members of staff.

Measurements or display deviations (incorrect measuring results) are possible if electromagnetic fields occur as well as due to static charging and instable power supply. It is then necessary to change the location.

Unpacking

Carefully remove the instrument from its packaging, remove the plastic wrapping and position the instrument in its intended working location.
