

TVAC40660

BNC crimp plug

The BNC compression plug is connected with a coaxial cable (RG-6). It ensures optimal transmission of the well-shielded signals in the RG-6 cable. This makes it easy to connect BNC cables to cameras, recorders, monitors, repeaters, or converters.

The matching RG-6 coaxial cable is a double-shielded 75-ohm cable that was specially developed for broadband applications (such as HD-SDI).

Product highlights:

- BNC crimp connector for RG-59 video cable
- 75 ohm
- With gold pin
