Full-wave rectifier type (AC specification: Insulation type Class B)

Improved durability

Extended service life due to the special construction (Compared with the existing shading coil)

Reduced buzzing noise

Due to being rectified to DC by the full-wave rectifier

Reduced apparent power

* Class B, N.C. valve (Compared with the existing model) 9.5 VA \rightarrow 8 VA (JSX20/JSXD60, 70 Series) 12 VA \rightarrow 9.5 VA (JSX30/JSXD80, 90 Series)

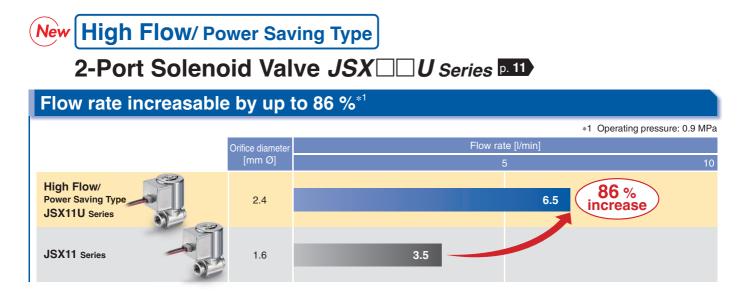

Improved OFF response

Specially constructed to improve the OFF response when operated with high viscosity fluids such as oil

Low-noise construction

Specially constructed to reduce metal noise during operation

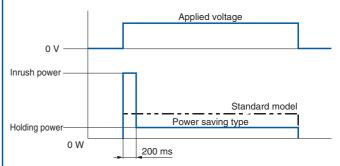

| Reduced va | alve size ^{*1} | | | | |

Modular Mounting Type 2-Port Solenoid Valve JSXM Series p. 39

Can be connected to modular type F.R.L. units

Simple Specials System

A system designed to respond quickly and easily to your special ordering needs For modular connection units (shipped assembled), the simple specials system can be used.

Short lead times

This system enables us to respond to your special needs (additional machining, accessory assembly, or the designing of a modular unit) and deliver your personalised products as quickly as standard products.

Repeat orders

Once we receive a simple special part number from one of your previous orders, we will process the order, manufacture the product, and deliver it to you as quickly as possible.

Please contact your local sales representative for more details.

The coil orientation and blow port position can be selected.

*1 Leakage: The value at a differential pressure of 0.01 MPa or higher and an ambient temperature of 20 °C

*2 This product has an IP67 enclosure, but if water enters the product, it may result in malfunction or breakage. Therefore, take appropriate measures to prevent water from entering the product when using in an environment where it is constantly exposed to water.

*3 Standards compliance varies depending on the model. For details, refer to page 7 and 46.
 *4 Druke consuming the value of 00 °C and when the value dependence is constantly exposed to water.

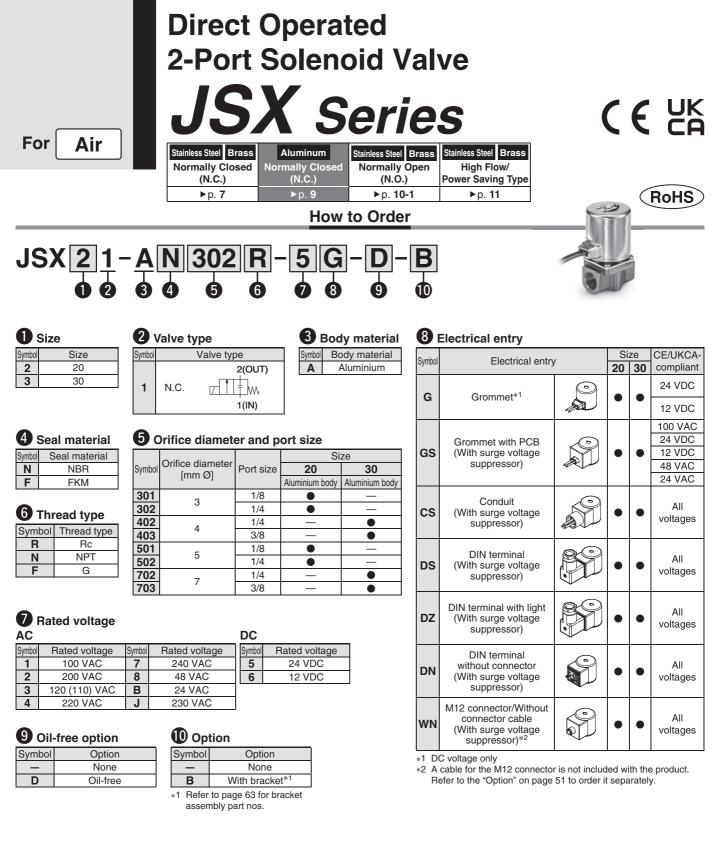

*4 Power consumption/Apparent power: The value at an ambient temperature of 20 °C and when the rated voltage is applied (Variation: ±10 %)

*5 There is no difference in the frequency and the inrush and energized apparent power, since a rectifying circuit is used in the AC.

*6 Temperature rise: The value at an ambient temperature of 20 °C and when the rated voltage is applied. Use this value as a reference as the actual value varies depending on the ambient environment.

Be sure to read the "Specific Product Precautions" before handling the product.

*1 Leakage: The value at a differential pressure of 0.01 MPa or higher and an ambient temperature of 20 °C

*2 This product has an IP67 enclosure, but if water enters the product, it may result in malfunction or breakage.

Therefore, take appropriate measures to prevent water from entering the product when using in an environment where it is constantly exposed to water. *3 Standards compliance varies depending on the model. For details, refer to page 9.

*4 Power consumption/Apparent power: The value at an ambient temperature of 20 °C and when the rated voltage is applied (Variation: ±10 %)

*5 There is no difference in the frequency and the inrush and energized apparent power, since a rectifying circuit is used in the AC.

*6 Temperature rise: The value at an ambient temperature of 20 °C and when the rated voltage is applied. Use this value as a reference as the actual value varies depending on the ambient environment.

Be sure to read the "Specific Product Precautions" before handling the product.

*1 The flow rate characteristics of this product vary.

*2 The values were calculated based on the combination of an Rc or NPT thread and a grommet. Add 20 g for the grommet type with PCB, 70 g for the conduit type, 50 g for the DIN terminal type, and 15 g for the M12 connector type.

Applicable Fluid Checklist

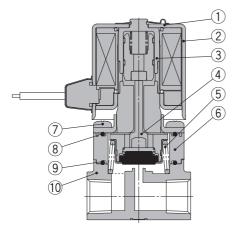

| Applicable | S | eal material | | | |
|------------|-----|--------------|------|--|--|
| fluid | NBR | FKM | EPDM | | |
| Air | ٠ | | | | |
| Water | | | | | |
| Oil | — | • | — | | |

* The list shows the compatibility between general fluids and the seal materials. Consider the operating environment and application sufficiently before selecting the seal material. Fluid and component compatibility should be checked before use. If something is not clear, please contact SMC.

Power Saving Specification

Power is saved by reducing the wattage required to hold the valve. Effective after being energized for more than 200 ms

* The valve has polarity. Refer to the "Electrical Circuits" on page 66 and be careful not to reverse the polarity.

*1 Leakage: The value at a differential pressure of 0.01 MPa or higher and an ambient temperature of 20 °C *2 This product has an IP67 enclosure, but if water enters the product, it may result in malfunction or breakage.

*2 This product has an IP67 enclosure, but if water enters the product, it may result in mainunction or breakage. Therefore, take appropriate measures to prevent water from entering the product when using in an environment where it is constantly exposed to water.
2. The take appropriate measures to prevent water from entering the product when using in an environment where it is constantly exposed to water.

*3 The high flow type is not in compliance with UL standards.

*4 Power consumption: The value at an ambient temperature of 20 °C and when the rated voltage is applied (Variation: ±10 %)
 *5 Temperature rise: The value at an ambient temperature of 20 °C and when the rated voltage is applied. Use this value as a reference as the actual value varies depending on the ambient environment.

*6 Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 2000 Hz. The test was performed in both an energized and de-energized state in the axial direction and at a right angle to the armature.

Impact resistance: No malfunction occurred when tested with a drop tester in the axial direction and at a right angle to the armature in both an energized and de-energized state, once in each condition. (Value in the initial state)

Do not use in an environment subject to constant vibration and/or impact.

Be sure to read the "Specific Product Precautions" before handling the product.

*1 The flow rate characteristics of this product vary.

*2 Indicates case of grommet type

Add 20 g for the grommet type with PCB, 70 g for the conduit type, 50 g for the DIN terminal type, and 15 g for the M12 connector type. For sizes 70, 80, and 90, the weight on the left is for the flange type, and the weight on the right is for the thread type.

Applicable Fluid Checklist

| Applicable | | Seal material | | | | | | |
|------------|-----|---------------|------|---|--|--|--|--|
| fluid | NBR | FKM | EPDM | | | | | |
| Air | | • | • | 1 | | | | |
| Water | | • | • |] | | | | |
| Oil | — | • | — | 1 | | | | |

The list shows the compatibility between general fluids and the seal materials. Consider the operating environment and application sufficiently before selecting the seal material. Fluid and component compatibility should be checked before use. If something is not clear, please contact SMC.

*1 Dew point temperature: -10 °C or less

*2 Leakage: The value at a differential pressure of 0.01 MPa or higher and an ambient temperature of 20 °C

*3 This product has an IP67 enclosure, but if water enters the product, it may result in malfunction or breakage.

Therefore, take appropriate measures to prevent water from entering the product when using in an environment where it is constantly exposed to water. *4 Standards compliance varies depending on the model. For details, check the standards compliance of each part number.

*5 Power consumption/Apparent power: The value at an ambient temperature of 20 °C and when the rated voltage is applied (Variation: ±10 %)

*6 There is no difference in the frequency and the inrush and energized apparent power, since a rectifying circuit is used in the AC.

*7 Temperature rise: The value at an ambient temperature of 20 °C and when the rated voltage is applied. Use this value as a reference as the actual value varies depending on the ambient environment.

Be sure to read the "Specific Product Precautions" before handling the product.

When the differential pressure is less than 0.01 MPa, operation may become unstable. Please contact SMC in case of low-flow operation. (Refer to page 67.)

Flow Rate Characteristics

Specific Product Precautions 0

Working Principle

De-energized

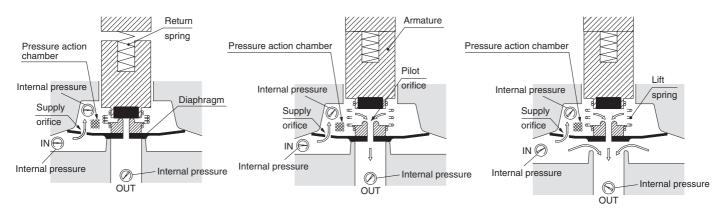

The fluid enters from the IN goes through the supply orifice to fill the pressure action chamber. Main valve is closed by the pressure in the pressure action chamber and the reaction force of the return spring.

Energized (Pilot valve open)

When the coil is energized, the armature is attracted causing the pilot orifice to opening. The fluid filling the pressure action chamber flows to the OUT side through the pilot orifice.

Energized (Main valve open)

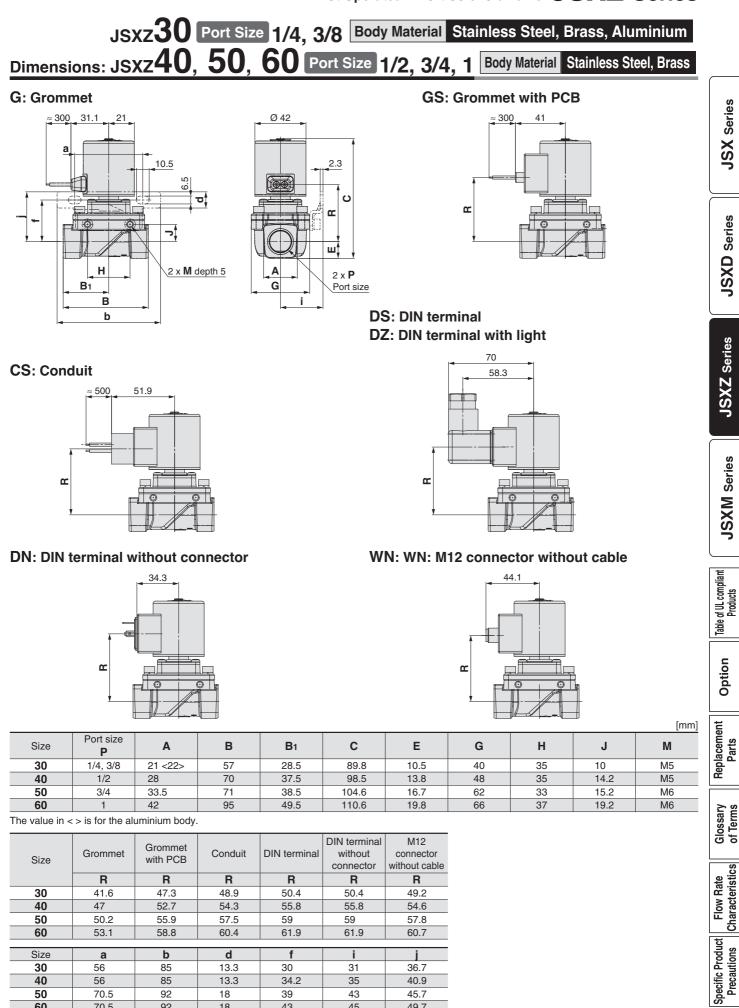

The pressure in the pressure action chamber decreases by discharging fluid through the pilot orifice. Because the force which pushes down the valve is reduced by the discharge of the fluid, the force that pushes up the main valve overcomes the push down force and opens the main valve. The main valve opens by the lift spring reaction force even if pressure on the IN side is 0 MPa or very low pressure.

Marning

Unstable flow may occur with the product under the following conditions: • low flow from the pump or compressor, etc. • use of several elbows or tees in the circuit, or • thin nozzles installed at the end of the piping, etc. This can cause valve opening/closing failure, or oscillation, and cause a valve malfunction. If products are used with vacuum, then the vacuum level can be unstable due to these conditions. Please contact SMC to check if the valve can be used in the application by providing the relevant fluid circuit.

*1 Leakage: The value at a differential pressure of 0.01 MPa or higher and an ambient temperature of 20 °C

*2 This product has an IP67 enclosure, but if water enters the product, it may result in malfunction or breakage.

Therefore, take appropriate measures to prevent water from entering the product when using in an environment where it is constantly exposed to water. *3 Standards compliance varies depending on the model. For details, refer to page 39.

*4 Power consumption/Apparent power: The value at an ambient temperature of 20 °C and when the rated voltage is applied (Variation: ±10 %)

*5 There is no difference in the frequency and the inrush and energized apparent power, since a rectifying circuit is used in the AC.

*6 Temperature rise: The value at an ambient temperature of 20 °C and when the rated voltage is applied. Use this value as a reference as the actual value varies depending on the ambient environment.

Be sure to read "Specific Product Precautions" before handling the product.

Socket connector pin arrangement

Socket connector pin arrangement

* The solenoid valve has no polarity for DC voltages. However, the high flow/ power saving type has polarity. Refer to the "Electrical Circuits" on page 66.

JSX/JSX Series Replacement Parts

Solenoid Coil Assembly (Applicable to the JSX, JSXD, JSXZ and JSXM series)

When ordering, be sure to add the "-KT1" suffix to the end of the part number of the valve currently in use.

• Enter the standard product number.

JSX (Stainless steel/Brass) p. 7 JSX (Aluminium) p. 9 JSX (High flow/ Power saving) ... p. 11 JSXD p. 25 JSXZ p. 35

JSXM p. 39

The solenoid coil assembly is shipped with a name plate with the valve part number printed on it. In addition, the name plate has the marks of all applicable standards printed on it.

For the solenoid coil assembly, eligibility for CE/UKCA marking and UL/CSA standard certification varies depending on the electrical entry type and the rated voltage.

多SMC

When ordering a solenoid coil assembly with different specifications than the valve currently in use, refer to the "How to Order" in the catalogue to confirm the status of standard compliance.

For solenoid coil replacement instructions, refer to the "Specific Product Precautions 8" on page 68.

Parts

JSX/JSX Series Glossary of Terms

Pressure Terminology

1. Max. operating pressure differential

The max. pressure differential (the difference between the inlet and outlet pressure) which is allowed for operation. When the outlet pressure is 0 MPa, this becomes the max. operating pressure.

2. Min. operating pressure differential

The min. pressure differential (the difference between the inlet pressure and outlet pressure) required to keep the main valve fully open.

3. Max. system pressure

The max. pressure that can be applied inside the pipelines (line pressure).

[The pressure differential of the solenoid valve portion must not exceed the max. operating pressure differential.]

4. Withstand pressure

The pressure in which the valve must be withstood without a drop in performance after holding for one minute under prescribed pressure and returning to the operating pressure range. (value under the prescribed conditions)

Electrical Terminology

1. Apparent power (VA)

Volt-ampere is the product of voltage (V) and current (A). Power consumption (W): For AC, $W = V \cdot A \cdot \cos \theta$. For DC, $W = V \cdot A$.

* cos θ shows power factor. cos $\theta \thickapprox 0.9$

2. Surge voltage

A high-voltage which is momentarily generated by shutting off the power in the shut-off area.

3. Degrees of protection

A degree defined in the "JIS C 0920: Waterproof test of electric machinery/appliance and the degree of protection against the intrusion of solid foreign objects."

First digit • • S

Second digit

First Digit:

Degree of protection against solid foreign objects

| 0 | Not protected |
|---|--|
| 1 | Protected against solid foreign objects of 50 mm Ø and larger |
| 2 | Protected against solid foreign objects of 12 mm Ø and larger |
| 3 | Protected against solid foreign objects of 2.5 mm Ø and larger |
| 1 | Protocted against solid foreign objects of 1.0 mm @ and larger |

- 4 Protected against solid foreign objects of 1.0 mm Ø and larger
- 5 Dust protected
- 6 Dust-tight

Second Digit:

Degree of protection against water

| 0 | Not protected | — |
|---|--|-------------------------------|
| 1 | Protected against vertically falling water droplets | Dripproof type 1 |
| 2 | Protected against vertically falling water droplets when enclosure is tilted up to 15° | Dripproof type 2 |
| 3 | Protected against rainfall when enclosure is tilted up to 60° | Rainproof type |
| 4 | Protected against splashing water | Splashproof type |
| 5 | Protected against water jets | Water-jet-proof type |
| 6 | Protected against powerful water jets | Powerful water-jet-proof type |
| 7 | Protected against the effects of temporary immersion in water | Immersible type |
| 8 | Protected against the effects of continuous immersion in water | Submersible type |

JSX/JSX Series Solenoid Valve Flow Rate Characteristics (How to indicate flow rate characteristics)

1. Indication of flow rate characteristics

The flow rate characteristics of equipment, such as a solenoid valve, etc., are indicated in their specifications as shown in Table (1).

Table (1) Indication of Flow Rate Characteristics

| Corresponding equipment | Indication by international standard | Other indications | Compliant standards |
|---------------------------------------|--------------------------------------|-------------------|---|
| | С, b | _ | ISO 6358:1989 JIS B 8390:2000 |
| Pneumatic equipment | _ | S | JIS B 8390:2000 Equipment: JIS B 8379, 8381-1, 8381-2 |
| | | Cv | ANSI/(NFPA)T3.21.3 R1-2008 |
| Process fluid control equipment | Kv | _ | IEC 60534-1:2005 IEC 60534-2-3:1997 |
| | _ | Cv | JIS B 2005-1:2012 JIS B 2005-2-3:2004 Equipment: JIS B 8471, 8472, 8473 |

2. Pneumatic equipment

- 2.1 Indication according to the international standards
- (1) Compliant standards
 - ISO 6358:1989 : Pneumatic fluid power—Components using compressible fluids— Determination of flow rate characteristics
 - JIS B 8390:2000 : Pneumatic fluid power—Components using compressible fluids— How to test flow rate characteristics
- (2) Definition of flow rate characteristics
 - The flow rate characteristics are indicated as a result of a comparison between the sonic conductance C and the critical pressure ratio b.
 - Sonic conductance **C** : Value which divides the passing mass flow rate of a piece of equipment in a choked flow condition by the product of the upstream absolute pressure and the density in a standard condition.
 - Critical pressure ratio **b** : Pressure ratio (downstream pressure/upstream pressure) which will turn to a choked flow when the value is smaller than this ratio.
 - Choked flow : Flow in which the upstream pressure is higher than the downstream pressure and where sonic speed in a certain part of a piece of equipment is reached. Gaseous mass flow rate is in proportion to the upstream pressure and not dependent on the downstream pressure.
 - Subsonic flow : Flow greater than the critical pressure ratio.
 - Standard condition : Air in a temperature state of 20 °C, absolute pressure 0.1 MPa (= 100 kPa = 1 bar), relative humidity 65 %. It is stipulated by adding the "(ANR)" after the unit depicting air volume. (Standard reference atmosphere) Compliant standards: ISO 8778:1990 Pneumatic fluid power—Standard reference atmosphere, JIS B 8393:2000: Pneumatic fluid power—Standard reference atmosphere

(3) Formula for flow rate

It is described by the practical units as following. When

$$\frac{P_2+0.1}{P_1+0.1} \le b$$
, choked flow

$$Q = 600 \times C (P_{1} + 0.1) \sqrt{\frac{293}{273 + T}}$$
(1)
When
$$\frac{P_{2} + 0.1}{P_{1} + 0.1} > b,$$
 subsonic flow
$$\sqrt{\left[\int_{0}^{1} P_{1} + 0.1 - V_{1}^{2} + 0.$$

$$\boldsymbol{Q} = 600 \times \boldsymbol{C} (\boldsymbol{P}_{1} + 0.1) \sqrt{1 - \left| \frac{\boldsymbol{P}_{2} + 0.1}{\boldsymbol{P}_{1} + 0.1} - \boldsymbol{b} \right|} \sqrt{\frac{293}{273 + \boldsymbol{T}}} \dots (2)$$

JSXD Series JSX Series

Table of UL compliant Products

Option

Replacement Parts

JSX/JSX Series

- **Q** : Air flow rate [l/min (ANR)]
- C : Sonic conductance [dm³/(s·bar)], dm³ (Cubic decimeter) of SI units = L (litre)
- **b** : Critical pressure ratio [—]
- P1: Upstream pressure [MPa]

P₂ : Downstream pressure [MPa]

T : Temperature [°C]

* Formula of subsonic flow is the elliptic analogous curve.

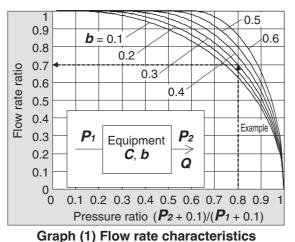

Flow rate characteristics are shown in Graph (1). For details, please use the calculation software available from the SMC website. Example)

Obtain the air flow rate for $P_1 = 0.4$ [MPa], $P_2 = 0.3$ [MPa], T = 20 [°C] when a solenoid value is performed in C = 2 [dm³/(s·bar)] and b = 0.3.

According to formula 1, the max. flow rate = 600 x 2 x (0.4 + 0.1) $x \sqrt{\frac{293}{273 + 20}} = 600 [l/min (ANR)]$

Pressure ratio = $\frac{0.3 + 0.1}{0.4 + 0.1} = 0.8$

Based on Graph (1), it will be 0.7 if the pressure ratio is 0.8 and the flow rate ratio is $\boldsymbol{b} = 0.3$. Hence, the flow rate = Max. flow x flow ratio = 600 x 0.7 = 420 [l/min (ANR)]

(4) Test method

Connect the piece of test equipment to the test circuit as shown in Fig. (1). While maintaining the upstream pressure at a fixed value above 0.3 MPa, measure the max. flow to be saturated initially. Next, measure this flow rate at 80 %, 60 %, 40 %, and 20 %, as well as the upstream and downstream pressure. The sonic conductance *C* can be calculated based on this max. flow rate. Use the data of the others and the subsonic flow formula to find *b*, and calculate the critical pressure ratio *b* from that average.

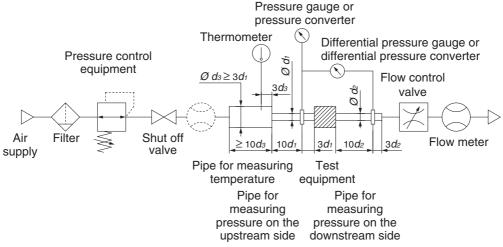

Fig. (1) Test circuit based on ISO 6358:1989, JIS B 8390:2000

Solenoid Valve Flow Rate Characteristics **JSX/JSX Series**

2.2 Effective area S **JSX** Series (1) Compliant standards JIS B 8390:2000: Pneumatic fluid power—Components using compressible fluids— How to test flow rate characteristics Equipment standards: JIS B 8373: Solenoid valve for pneumatics JIS B 8379: Silencer for pneumatics JIS B 8381-1: Fittings for pneumatics – Part 1: Push-in fittings for thermoplastic resin tubing JIS B 8381-2: Fittings for pneumatics – Part 2: Compression fittings for thermoplastic resin tubing **JSXD** Series (2) Definition of flow rate characteristics Effective area S: Cross-sectional area that has an ideal throttle without friction or reduced flow. The value is derived by calculating pressure changes inside of an air tank when the compressed air is discharged from a piece of equipment mounted on the tank in a choked flow. The value of the effective area S, like that of sonic conductance C, expresses the "ease of flow." (3) Formula for flow rate When $\underline{P_2 + 0.1}_{-} \le 0.5$, choked flow **JSXZ** Series **P**₁ + 0.1 $Q = 120 \times S (P_1 + 0.1)$ 293 273 + **T**(3) When $\frac{P_2 + 0.1}{P_1 + 0.1} > 0.5$, subsonic flow $Q = 240 \times S \sqrt{(P_2 + 0.1)(P_1 - P_2)} \sqrt{\frac{293}{273 + T}}$(4) **JSXM** Series Conversion with sonic conductance *C*: $S = 5.0 \times C$(5) **Q** : Air flow rate [l/min (ANR)] S : Effective area [mm²] P1: Upstream pressure [MPa] **P**₂ : Downstream pressure [MPa] T: Temperature [°C] Table of UL compliant Products The formula for subsonic flow (4) is only applicable when the critical pressure ratio \boldsymbol{b} is the unknown piece * of equipment. In the sonic conductance C formula (2), it is the same formula as when b = 0.5. (4) Test method Connect the piece of test equipment to the test circuit as shown in Fig. (2). Discharge the air from the air tank filled with compressed air at a fixed value above 0.6 MPa (0.5 MPa) into the atmosphere until the pressure Option inside the tank falls to 0.25 MPa (0.2 MPa). Measure the discharge time and the residual pressure inside the tank after discharging until it has returned to the normal value. Then, calculate the effective area S using the following formula. Select an air tank with a volume within the specified range of the test equipment's effective area. For JIS B 8379, the pressure values are in parentheses and the coefficient of the formula is 12.9. $\boldsymbol{S} = 12.1 \, \frac{\boldsymbol{V}}{\boldsymbol{t}} \log_{10} \left(\frac{\boldsymbol{P}\boldsymbol{s} + 0.1}{\boldsymbol{P} + 0.1} \right)$ 293 **T**(6) Power Replacemen Parts Pressure switch ° supply Thermometer S : Effective area [mm²] Pressure control Contro Solenoid valve V : Air tank capacity [L] circuit equipment Test t : Discharging time [s] equipment **Ps**: Pressure inside air tank Air tank Ð Glossary of Terms Rectifier tube on the downstream side before discharging [MPa] **Rectifier tube on the** Air ≶ Shut off Filter Pressure gauge Ş supply **P** : Residual pressure inside air tank valve or pressure R WA. converter after discharging [MPa] upstream side

Specific Product Precautions

2.3 Flow coefficient *Cv* factor

The United States Standard ANSI/(NFPA)T3.21.3:R1-2008R: Pneumatic fluid power—Flow rating test procedure and reporting method for fixed orifice components

This standard defines the Cv factor of the flow coefficient by the following formula that is based on the test conducted by the test circuit analogous to ISO 6358.

$$\boldsymbol{C}\boldsymbol{v} = \frac{\boldsymbol{Q}}{114.5\sqrt{\frac{\Delta \boldsymbol{P}\left(\boldsymbol{P}_{2} + \boldsymbol{P}_{a}\right)}{T_{1}}}}$$
(7)

 $\Delta \mathbf{P}$: Pressure drop between the static pressure tapping ports [bar]

- **P**₁ : Pressure of the upstream tapping port [bar gauge]
- P_2 : Pressure of the downstream tapping port [bar gauge]: $P_2 = P_1 \Delta P$
- **Q** : Flow rate [L/s standard condition]

Pa : Atmospheric pressure [bar absolute]

T1 : Upstream absolute temperature [K]

The test conditions are $P_1 + P_a = 6.5 \pm 0.2$ bar absolute, $T_1 = 297 \pm 5K$, 0.07 bar $\leq \Delta P \leq 0.14$ bar. This is the same concept as the effective area **A** which ISO 6358 stipulates as being applicable only when the pressure drop is smaller than the upstream pressure and the compression of air does not become a problem.

3. Process fluid control equipment

(1) Compliant standards

IEC 60534-1:2005: Industrial-process control valves. Part 1: Control valve terminology and general considerations

IEC 60534-2-3:1997: Industrial-process control valves. Part 2: Flow capacity, Section Three-Test procedures

JIS B 2005-1:2012: Industrial-process control valves – Part 1: Control valve terminology and general considerations

JIS B 2005-2-3:2004: Industrial-process control valves – Part 2: Flow capacity – Section 3: Test procedures Equipment standards: JIS B 8471: Solenoid valve for water

JIS B 8472: Solenoid valve for steam JIS B 8473: Solenoid valve for fuel oil

(2) Definition of flow rate characteristics

Kv factor: Value of the clean water flow rate (represented by m³/h) which runs through a valve (test equipment) at 5 to 40 °C when the pressure difference is 1 x 10⁵ Pa (1 bar). It is calculated using the following formula.

$$Kv = Q_{\sqrt{\frac{1 \times 10^5}{\Delta P}} \cdot \frac{\rho}{1000}}$$
(8)

$$Kv: Flow coefficient [m3/h]$$
(9)

$$Q : Flow rate [m3/h]$$
(3) Formula of flow rate
It is described by practical units. Also, the flow rate characteristics are shown in Graph (2).
In the case of liquids:

$$Q = 53 \ Kv \sqrt{\frac{\Delta P}{G}}$$
(9)

$$Q : Flow rate [l/min]$$
(7)

$$Kv: Flow coefficient [m3/h]$$
(9)

$$Q : Flow rate [l/min]$$
(9)

$$Q : Flow rate [l/min]$$
(10)

$$Q = 232 \ Kv \sqrt{\Delta P (P_2 + 0.1)}$$

$$Q$$

Solenoid Valve Flow Rate Characteristics **JSX/JSX Series**

Conversion of flow coefficient: Kv = 0.865 Cv(11)

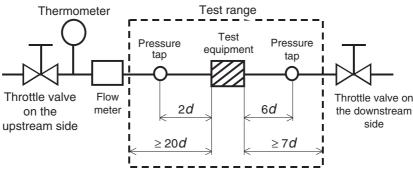

Here.

Cv factor: Value of the clean water flow rate (represented by US gal/min) which runs through a valve at 40 to 100°F when the pressure difference is 1 lbf/in² (psi)

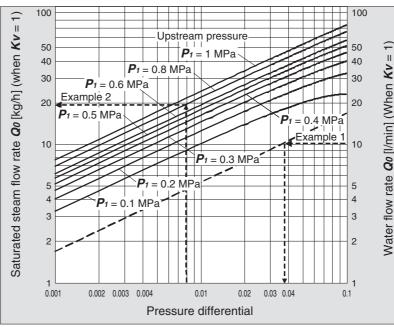

The values of **Kv** and **Cv** factors for pneumatic purposes are different due to different test methods.

(4) Test method

Connect the piece of test equipment to the test circuit as shown in Fig. (3), and run water at 5 to 40 °C. Then, measure the flow rate with a pressure difference where vapourization does not occur in a turbulent flow (pressure difference of 0.035 MPa to 0.075 MPa when the inlet pressure is within 0.15 MPa to 0.6 MPa). However, as the turbulent flow is definitely caused, the pressure difference needs to be set with a large enough difference so that the Reynolds number does not fall below 1 x 105, and the inlet pressure needs to be set slightly higher to prevent vapourization of the liquid. Substitute the measurement results in formula (8) to calculate Kv.

Graph (2) Flow rate characteristics

Example 1)

Obtain the pressure difference when 15 [l/min] of water runs through a solenoid valve with a $\mathbf{Kv} = 1.5$ [m³/h]. As the flow rate when Kv = 1 is calculated as the formula: $Q_0 = 15 \times 1/1.5 = 10$ [l/min], read off ΔP when Q_0 is 10 [l/min] in Graph (2). The reading is 0.036 [MPa].

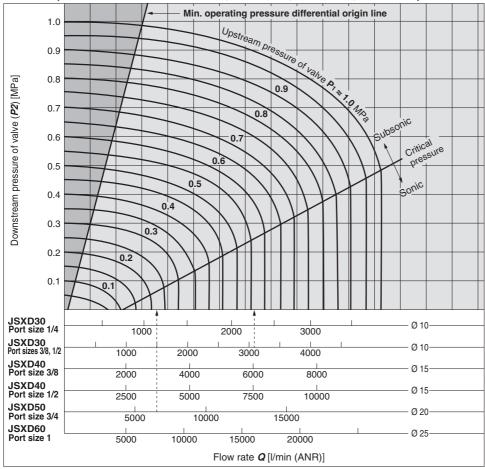

Example 2)

Obtain the saturated steam flow rate when $P_1 = 0.8$ [MPa] and $\Delta P = 0.008$ [MPa] with a solenoid value with a $\mathbf{Kv} = 0.05$ [m³/h]. Read off Q_0 when P_1 is 0.8 and ΔP is 0.008 in Graph (2), the reading is 20 [kg/h]. Therefore, the flow rate is calculated as the formula: $Q = 0.05/1 \times 20 = 1$ [kg/h].

JSXD Series **Flow Rate Characteristics** * Use this graph as a guide. In the case of obtaining an accurate flow rate, refer to pages 54 to 58.

For Air (Orifice diameter: Ø 10 mm, Ø 15 mm, Ø 20 mm, Ø 25 mm)

How to read the graph

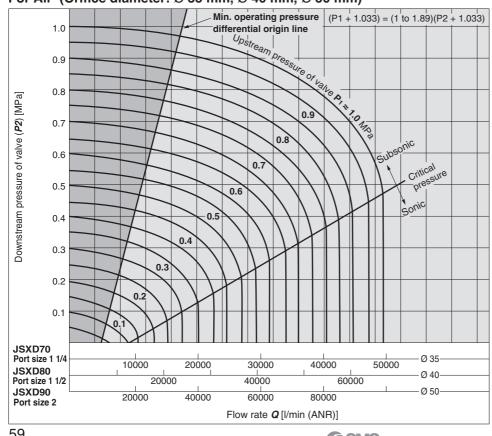

The sonic range pressure to generate a flow rate of 6000 l/min (ANR) is as follows. For a Ø 15 orifice (JSXD40/Port size 3/8), **P**1 ≈ 0.57 MPa,

for a Ø 20 orifice (JSXD50/Port size 3/4), $P_1 \approx 0.22 \text{ MPa}$

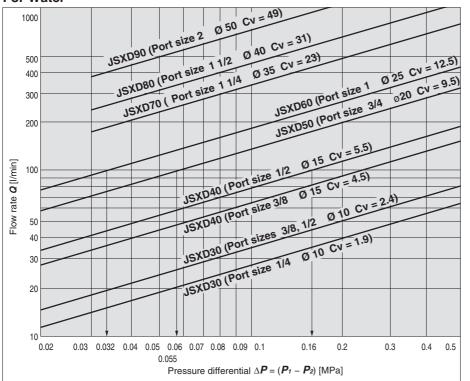

AWarning

In the area located left to the min. operating pressure differential origin line in the flow rate characteristics table, the min. operating pressure is not generated. Do not use the product in this area as this may cause operation failure (valve opening failure, valve closing failure) or damage of the valve. Select valves with suitable size.

How to read the graph

∆*P*≈0.032 MPa

The pressure differential to generate a flow rate of 100 l/min water is as follows. For a Ø 15 orifice (JSXD40/Port size 1/2), $\Delta P \approx 0.16$ MPa, for a Ø 20 orifice (JSXD50), $\Delta P \approx 0.055$ MPa, for a Ø 25 orifice (JSXD60),

JSX Series

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 2-port solenoid valve for fluid control precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Design

Marning

1. Confirm the specifications.

Give careful consideration to the operating conditions, such as the application, fluid, and environment, and use within the specified operating ranges. If the product is used beyond the specification range, this may cause the product to break or malfunction. We do not guarantee against any damage if the product is used outside of the specification range.

- 2. Cannot be used as an emergency shutoff valve, etc. This product is not designed for use as an emergency shutoff valve. If the valve is used in this type of system, other reliable safety assurance measures should also be adopted.
- 3. Cannot be used for pressure (including vacuum) holding

This product cannot be used to hold the pressure (including vacuum) inside of a pressure vessel because valve air leakage is unavoidable.

4. Closed liquid circuit

In a closed circuit, when liquid is static, the pressure could rise due to temperature fluctuations. This pressure rise could cause either a malfunction or damage to components such as valves. To prevent this, install a relief valve in the system.

5. Actuator driving

When an actuator, such as a cylinder, is to be driven using a valve, take appropriate measures to prevent potential danger caused by actuator operation.

6. Extended periods of continuous energization

The solenoid coil will generate heat when continuously energized. Avoid using in a tightly shut container. Install the valve in a well-ventilated area. Furthermore, do not touch it while it is being energized or right after it has been energized.

7. Water hammer

When an impact, such as water hammer, etc., caused by rapid pressure fluctuation is applied, the valve may be damaged. Install water hammer relief equipment (an accumulator, etc.) or use an SMC water hammer relief valve (VXR series). Please contact SMC for details.

8. Back pressure

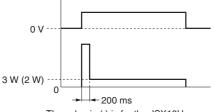

If there is a possibility that back pressure will be applied, take countermeasures by installing a check valve, etc., on the downstream side.

 Do not disassemble the product or replacement parts or make any modifications to either of them, including additional machining. Doing so may lead to human injury and/or an accident.

10. High flow/ Power saving type

Power consumption is reduced compared with the standard model by reducing the wattage required to hold the valve in an energized state.

Effective after being energized for more than 200 ms when the voltage is applied

* The value in () is for the JSX10U.

The OFF time should be at least 2 s.

If the OFF time is less than 2 s, the coil may generate an abnormal amount of heat, resulting in damage, depending on the length of ON time.

Do not use in an environment subject to constant vibration and/or impact.

The valve may close when held in an energized state.

Design

Caution

1. Power saving circuit

The power saving circuit (PWM control) built into the product reduces power consumption via high-speed switching operation with the PWM control circuit after the rated voltage has been applied for approx. 200 ms when energized.

Please note that the effect of this PWM control can cause the following problems depending on the type of switch and drive circuit used.

- 1. When a mechanical relay, etc., is used in the drive circuit, the product may not turn ON normally if chattering occurs within approx. 200 ms of the start of energization.
- 2. When a filter or another device is installed between the power supply and the product to achieve noise reduction, the current may be reduced due to filtering, which may prevent the product from turning ON normally.
- prevent the product from turning ON normally.
 When an SSR (solid state relay) with a built-in photo coupler is used in the drive circuit, the photo coupler may not turn OFF, preventing the product from switching OFF (it will remain ON).

Operating Environment

Warning

Do not use the product in locations such as those described below.

- 1. Locations with atmospheres in which water vapour is present or locations in which corrosive fluids (chemicals), sea water, or water may come into contact with the product Implement appropriate protective measures if water will be applied to the product for long periods of time, even for products which have IP65 or IP67 enclosures. Such water may enter through microscopic gaps in the product's external surfaces, resulting in fire damage or short-circuiting of the solenoid valve coils. If installing the product in close proximity to equipment such as machine tools, processing machines, etc., which use large amounts of liquids or oils, be sure to confirm that liquid dispersal or spatter from the peripheral equipment does not come into contact with the product.
- 2. Locations with explosive atmospheres
- 3. Locations subject to vibration or impact
- 4. Locations where radiated heat will be received from nearby heat sources
- Locations that are outdoors (Excludes outdoor specification valves) Although using an indoor specification product outdoors voids its product warranty, if outdoor use proves unavoidable, be sure to implement the protective measures mentioned below.
 Install a protective cover, etc., to protect the product from direct sunlight.
 - 2) Encase the product in an enclosure to protect it from rain and wind. * If only a roof-type cover is provided for the product, it will not be sufficiently protected from side winds or rain splashing up from the ground, which will result in water adhering to and entering the product. In addition, when the product is encased in an enclosure, be sure to implement proper ventilation measures to prevent overheating due to long-term energizing of the product.
 - 3) Be sure to confirm that the location is not one in which condensation is easily generated.

If the product is used in an environment with large temperature fluctuations, etc., condensation may be generated, and water may adhere to the external surface of the product. Be sure to implement protective measures against condensation, such as ambient temperature control, in such locations where condensation is easily generated.

6. Locations where freezing may occur within piping lines [When the fluid is liquid]

If the product is to be used in cold regions or during winter, be sure to implement measures to prevent the freezing of fluids. If the fluid is likely to freeze, implement measures such as draining the water in the piping when the equipment is OFF or installing a heater or insulation in the piping.

If warming the solenoid valve, be sure to avoid the coil portion as warming it will result in poor heat dissipation.

[When the fluid is air]

With high flow rates, drain may be generated due to adiabatic expansion, resulting in freezing.

Be sure to periodically drain the product or conduct drain removal using an air dryer.

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 2-port solenoid valve for fluid control precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Fluid

Marning

1. Fluid selection

- 1) Compatibility between the components and fluids should be checked in the application before use.
- 2) Since the compatibility of the fluid used may vary depending on its type, additives, concentration, temperature, etc., give sufficient consideration when selecting the material. Please contact SMC if anything is unclear.
- 3) Use a fluid with a kinematic viscosity of 50 mm 2 /s or less.
- **2.** Do not use the product with the fluids shown below. 1) Fluids that are harmful to humans
 - 2) Combustion-supporting or flammable fluids
 - 3) Corrosive gas
 - 4) Sea water, Saline solution
- 3. Take measures to prevent static electricity, since some fluids can cause static electricity.

4. Fluid temperature

 $\label{eq:operate} \mbox{ Operate within the specified operating fluid temperature range}.$

- 5. Install a filter (strainer) to ensure clean fluids.1) The use of a fluid that contains foreign matter can cause
 - problems, such as malfunction and seal failure by promoting the wear of the valve seat and armature, by sticking to the sliding parts of the armature, etc. Install a filter (strainer) on the upstream side of the valve to remove foreign matter. Air: 5 μ m or less Water: 100 mesh or more
 - 2) Replace or clean the filter (strainer) when the pressure drop reaches 0.1 MPa to prevent them from getting clogged.

Fluid Quality

1. Air

- 1) Do not use compressed air that contains chemicals, synthetic oils that include organic solvents, salt, corrosive gases, etc., as it can cause malfunction or damage.
- 2) Compressed air that contains excessive drainage may cause the malfunction of valves and other pneumatic equipment. Install an aftercooler or an air dryer on the inlet side of the valve as a countermeasure against drainage.
- 3) If excessive carbon powder is generated by the compressor, it may adhere to the inside of the valves and cause malfunction. Install a mist separator on the inlet side of the valve as a countermeasure to remove any carbon powder.
- 4) For compressed air quality, refer to the Web Catalogue.
- 5) When operating fluid air with a dew point of −70 °C or lower, the inside of the valve may wear and the product life will be shortened.

2. Water

- 1) Be aware that rust stains, chloride separation, etc., from the piping may cause malfunction, leakage, or, in worse case scenarios, damage due to corrosion. Also, such damage may result in the spraying of fluids or scattering of parts. Please be sure to have protective measures in place in case such incidents should occur.
- 2) In the case that water contains substances such as calcium and magnesium, which generate hard scale and sludge, install water softening equipment and a filter (strainer) directly upstream from the valve to remove these substances, as this scale and sludge can cause the valve to malfunction.
- 3) The water pressure of tap water is usually 0.4 MPa or less, but the pressure can sometimes increase to 1.0 MPa in tall buildings. Therefore, pay attention to the max. operating pressure differential.

Fluid Quality

Marning

3. Oil

Generally, FKM is used as seal material, as it is resistant to oil. The resistance of the seal material may deteriorate depending on the type of oil, manufacturer, or additives. Check the resistance before use.

The kinematic viscosity must not exceed 50 mm²/s.

Mounting

Marning

- 1. Ensure sufficient space for maintenance and inspection.
- 2. When mounting the product, avoid sources of vibration, or adjust the arm from the body to the min. length so that resonance will not occur.
- 3. Do not install the product near a heat source and install it in locations where the product is not affected by radiant heat.
- 4. Do not apply external force to the coil section. When the product is installed, apply a wrench to the outside of the piping connection while paying attention that it will not come into contact with the coil.
- 5. Do not warm the coil section with a heat insulator, etc.

When insulation is used as a countermeasure against freezing, the insulation should be limited to the piping and body only. Do not insulate the coil. This can cause the coil to burn out.

6. If air leakage increases or equipment does not operate properly, stop operation. After installation or during maintenance, check that the product is correctly mounted with appropriate functional and leakage

is correctly mounted with appropriate functional and leakage inspections by supplying compressed air and power supplies. Do not use the product when the equipment does not operate correctly.

7. Do not touch the valve while it is being energized or right after it has been energized.

Valves will reach high temperatures after operation. Use caution, as there is a danger of being burnt if a valve is touched directly.

▲Caution

1. Painting and coating

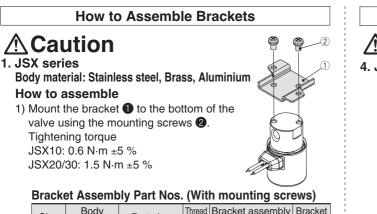

Warnings or specifications printed or labelled on the product should not be erased, removed, or covered up.

Positioning hole (IN side only)

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 2-port solenoid valve for fluid control precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

| | Size | Body material | Port size | Thread type | Bracket assembly part no. | Bracket material | |
|--|------|------------------------|---------------|----------------|------------------------------|------------------|--|
| | 10 | Brass, Stainless steel | 1/8 | | JSX021-12A-3 | | |
| | 20 | Stainless steel | 1/0 | Rc | JSX022-12A-3 | | |
| | | Brass, | 1/8, 1/4, 3/8 | NPT | JSX20-12A-4 | Stainless | |
| | 30 | Stainless steel*1 | 1/8, 1/4, 3/8 | G | J3720-12A-4 | steel | |
| | 20 | Aluminium | 1/8, 1/4, 3/8 | a | VX021N-12A | | |
| | 30 | Aluminium | 1/4, 3/8 |] | VX022N-12A | | |

*1 Only N.O. specification is available.

2. JSX series

Body material: Stainless steel (N.C. specification, Port size: 1/4, 3/8)

How to assemble

- Insert the bracket
 into the IN port side of the valve.
- 2) Secure it with the hexagon socket head set screw 2.
 Tightening torque: 0.4 N·m ±5 %

Caution regarding assembly

 Pay attention to the bracket insertion direction. There is only a positioning hole on the IN port side. Therefore, the bracket cannot be mounted to the OUT port side.

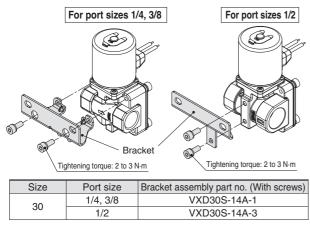

M3 thread

- 2) The bracket should be mounted after connecting the fitting. (Refer to the "Piping" section in the "Specific Product Precautions.")
- * The bracket is shipped together with the product.

Bracket Assembly Part Nos. (With set screw)

| Size | Port size | Thread type | Bracket assembly part no. (With set screw) | Material |
|--------|-------------------------------|----------------|---|-----------|
| 20, 30 | 1/4 Rc, NPT, G 3/8 Rc, NPT | Rc, NPT, G | JSX022-12A-2-1 | Chaimlana |
| | | JSX022-12A-2-1 | Stainless steel | |
| | 3/0 | G | JSX022-12A-2-2 | steer |

3. JSXD30 series: How to assemble brackets

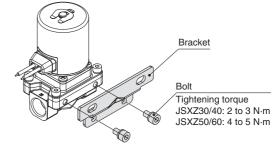

* For the JSXD30 series, the bracket is shipped together with the product.

How to Assemble Brackets

▲ Caution

4. JSXZ series: How to assemble brackets

- The bracket is shipped together with the product.
- For the JSXZ 5 0 / 6 0 , the mounting bolts and washers are separable, so be careful not to lose the washers.

| Size | Port size | Bracket assembly part no. (With screws) |
|--------|---------------|---|
| 30, 40 | 1/4, 3/8, 1/2 | VXZ30S-14A-1 |
| 50, 60 | 3/4, 1 | VXZ50S-14A-1 |

 There may be cases in which the tubing detaches from the fitting and thrashes around uncontrollably due to tubing degradation or fitting breakage. To prevent this, fit the tubing with a protective cover or secure it in place.

Piping

2. If using tube piping, secure the product to a permanent fixture. Do not suspend it from the tubing.

ACaution

- 1. For handling One-touch fittings, refer to the "Fittings and Tubing Precautions" in the "Handling Precautions for SMC Products."
- 2. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil, and other debris from inside the pipe. Install piping so that it does not apply pulling, pressing, bending, or other forces on the valve body.

3. Winding of sealant tape When connecting pipes, fittings, etc., be sure that chips from the pipe threads and sealing material do not enter the valve. Furthermore, when sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

4. Screw tightening torque for piping

When connecting piping to the valve, tighten with the proper tightening torque shown below.

Tightening Torque for Piping

SMC

| | <u>v</u> i i | <u> </u> | |
|-------------------|--------------------------------|-------------------|--------------------------------|
| Connection thread | Proper tightening torque [N·m] | Connection thread | Proper tightening torque [N·m] |
| 1/8 | 3 to 5 | 1 | 36 to 38 |
| 1/4 | 8 to 12 | 1 1/4 | 40 to 42 |
| 3/8 | 15 to 20 | 1 1/2 | 48 to 50 |
| 1/2 | 20 to 25 | 2 | 48 to 50 |
| 3/4 | 28 to 30 | | |

If the tightening torque is applied to the fitting while the valve is secured to the bracket, the bracket might break.

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 2-port solenoid valve for fluid control precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Piping

ACaution

- 5. When using a fitting other than an SMC fitting Follow the instructions given by the fitting manufacturer.
- 6. Avoid connecting ground lines to piping, as this may cause the electric corrosion of the system.
- 7. When connecting piping to a product, avoid mistakes regarding the supply port, etc.

8. Recommended piping conditions

When connecting piping to the One-touch fitting, use a pipe length with sufficient margin, in accordance with the piping conditions shown in Fig. 1. Also, when using a tying band, etc., to bind the piping together, make sure that external force does not come to bear on the fitting. (See Fig. 2.)

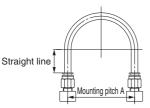

Fig. 1 Recommended piping

| | 0 | | 11.0 | Unit: mm |
|--------|--------------|-------------------|---------------------|------------|
| Tubing | 1 | Straight line | | |
| size | Nylon tubing | Soft nylon tubing | Polyurethane tubing | length |
| Ø 1/8" | 44 or more | 29 or more | 25 or more | 16 or more |
| Ø 6 | 84 or more | 39 or more | 39 or more | 30 or more |
| Ø 1/4" | 89 or more | 56 or more | 57 or more | 32 or more |
| Ø 8 | 112 or more | 58 or more | 52 or more | 40 or more |
| Ø 10 | 140 or more | 70 or more | 69 or more | 50 or more |
| Ø 12 | 168 or more | 82 or more | 88 or more | 60 or more |

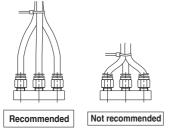

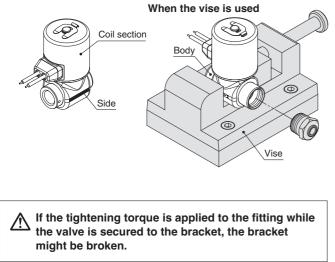

Fig. 2 When using a tying band to bind the piping together

9. When connecting a fitting to the valve, clamp the side of the body with a vise.

Piping

▲Caution

10. When using a stainless steel bracket (N.C. specification, Port size: 1/4, 3/8), connect the fitting in accordance with the following procedure.

Step 1) Connect the fittings to both the IN and OUT sides of the valve. Step 2) Insert the IN side port of the valve into the bracket hole. Step 3) Secure the valve to the bracket with the hexagon socket set screw.

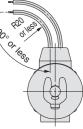

Wiring

AWarning

The solenoid valve is an electrical product. For safety, install an appropriate fuse and circuit breaker before use. When using multiple solenoid valves, it is not sufficient to merely install one fuse. For protecting the equipment more safely, select an appropriate fuse to each circuit of the solenoid valve.

▲Caution

- 1. As a rule, use electrical wire with a cross sectional area of 0.5 to 1.25 mm² for wiring.
- 2. External force applied to the lead wire If an excessive force is applied to the lead wire, this may cause faulty wiring. Take appropriate measures so that a force of 10 N or more is not applied to the lead wire. Do not bend the lead wires beyond 90° with a radius of less than 20 mm or damage may occur.

- 3. Use electrical circuits which do not generate chattering in their contacts.
- 4. Use voltage which is within ± 10 % of the rated voltage. In cases with a DC power supply where importance is placed on responsiveness, stay within ± 5 % of the rated value. The voltage drop is the value in the lead wire section connecting the coil.
- 5. When a surge from the solenoid affects the electrical circuitry, install a surge voltage suppressor, etc., in parallel with the solenoid. Or, use the product with a surge voltage suppressor.

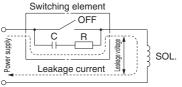

Residual voltage of the surge voltage suppressor DC specification: Approx. 60 V

AC specification: Approx. 1 V High flow/ Power saving type: Approx. 1 V

6. Leakage voltage

SMC

When the solenoid valve is operated using the controller, etc., the leakage voltage should be the product allowable leakage voltage or less. Particularly when using a resistor in parallel with a switching element and using a C-R element to protect the switching element, take note that leakage current will flow through the resistor, C-R element, etc., creating a possible danger that the valve may not turn off.

AC coil: 5 % or less of rated voltage DC coil: 2 % or less of rated voltage

JSXM Series

JSXD Series

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 2-port solenoid valve for fluid control precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

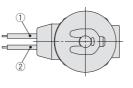

Electrical Connections

≜Caution

1. Grommet

Lead wire: AWG20 Insulator O.D.: 2.6 mm

| Rated | Lead wire colour | | | |
|----------|------------------|------|--|--|
| voltage | 0 | 2 | | |
| DC | Black | Red | | |
| 100 VAC | Blue | Blue | | |
| 200 VAC | Red | Red | | |
| Other AC | Grey | Grey | | |

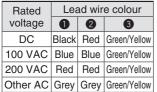

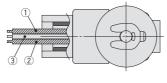

* There is no polarity.

However, the high flow/ power saving type has polarity. Refer to the "Electrical Circuits" on page 66.

2. Conduit

Lead wire: AWG18 Insulator O.D.: 2.8 mm

* There is no polarity.

- However, the high flow/ power saving type has polarity. Refer to the "Electrical Circuits" on page 66.
- * 3: Ground wire

3. DIN terminal

Disassembly

- After loosening the binding head screw with flange, then if the housing is pulled in the direction of the arrow, the connector will be removed from the solenoid valve.
- 2. Pull out the binding head screw with flange from the housing.
- 3. There is a cutout on the bottom of the terminal block. Insert a small flat head screwdriver, etc., into this cutout, and remove the terminal block from the housing. (Refer to the figure to the right.)

4. Remove the gland nut, and pull out the washer and the rubber seal. Wiring

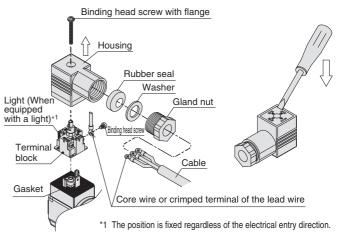

1. Pass the cable through the gland nut, washer, and rubber seal in this order, and insert these parts into the housing.

2. Loosen the binding head screw of the terminal block, then insert the core wire or the crimped terminal of the lead wire into the terminal, and securely fix it with the binding head screw. The binding head screw of the terminal block is M3.

- *1 Tighten the screw to a torque of between 0.5 and 0.6 N·m.
- *2 Cable O.D.: Ø 6 to Ø 12 mm
- *3 For an outside cable diameter of Ø 9 to Ø 12 mm, remove the internal parts of the rubber seal before use.

Assembly

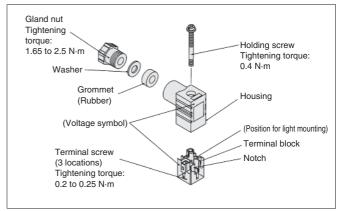

- Pass the cable through the gland nut, washer, rubber seal, and the housing in this order, and connect to the terminal block. Then, set the terminal block inside the housing. (Push in the terminal block until it snaps into position.)
- 2. Insert the rubber seal and the washer in this order into the cable entry of the housing, and then tighten the gland nut securely.
- 3. Insert the gasket between the bottom part of the terminal block and the plug attached to the equipment, and then insert the binding head screw with flange from the top of the housing, and tighten it.
 - *1 Tighten the screw to a torque of between 0.5 and 0.6 N·m.
 - *2 The orientation of the connector can be changed in steps of 90° by changing the method of assembling the housing and the terminal block.

For the JSX10

Compatible cable Cord O.D.: Ø 3.5 to Ø 7

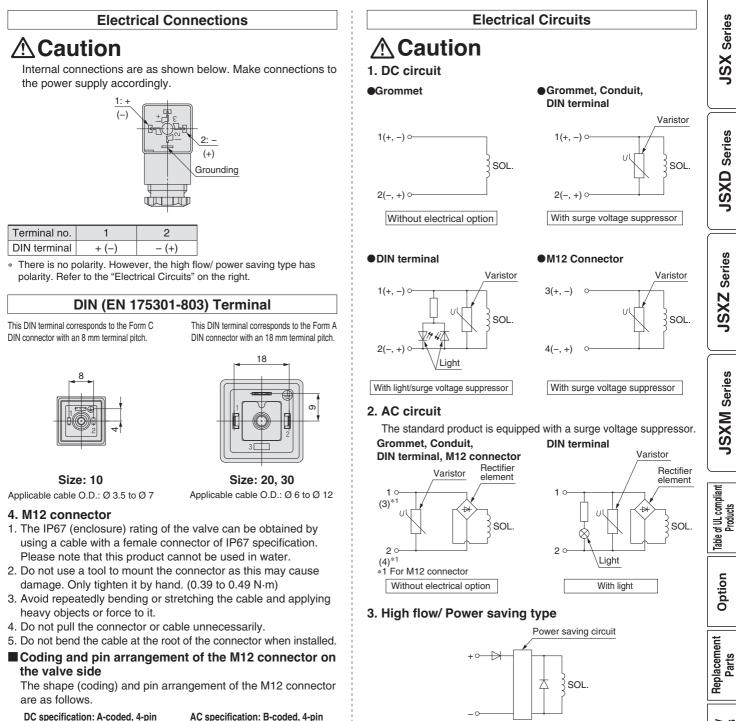

(Reference) 0.5 mm², 2-core or 3-core, equivalent to JIS C 3306

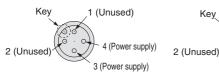

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 2-port solenoid valve for fluid control precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

* There is no polarity for DC voltages. However, the high flow/ power saving type has polarity. Refer to the "Electrical Circuits" on the right.

When using the cable with a female connector, make sure that the coding is correct. When installing the cable, be sure to align the key on the cable side connector (female side) with the key on the valve side connector (male side).

Be careful not to squeeze it in the wrong direction as pin damage, etc., may result.

Maintenance

Marning

1. Removal of product

- 1) Shut off the fluid supply and release the fluid pressure in the system.
- 2) Shut off the power supply.
- 3) Confirm that the valve temperature has dropped sufficiently before removing the product.
- 2. Replace or clean filters (strainers) periodically.
 - 1) Replace filters after one year of use, or earlier if the pressure drop reaches 0.1 MPa.
 - 2) Clean strainers when the pressure drop reaches 0.1 MPa.

3. Exhaust the drainage from air filters periodically.

If condensation in the drain bowl is not emptied on a regular basis, the bowl will overflow and allow the condensation to enter the compressed air lines. This causes the malfunction of pneumatic equipment. If the drain bowl is difficult to check and remove, the installation of a drain bowl with an auto drain option is recommended.

4. Low frequency operation

Switch valves at least once every 30 days to prevent malfunction. Also, in order to use them under the optimum state, conduct a regular inspection biannually.

5. Storage

In the case of long-term storage after use, thoroughly remove all moisture and store it in a location where the product is not exposed to sunlight and higher humidity to prevent rust and deterioration of rubber materials, etc.

6. Perform a maintenance and inspection periodically. Confirm that the product is mounted correctly by conducting suitable function and leakage tests periodically. If air leakage increases or equipment does not operate properly, stop operation.

Return of Product

Warning

If the product to be returned is contaminated or is possibly contaminated with substances that are harmful to humans, for safety reasons, please contact SMC beforehand and then employ a specialist cleaning company to decontaminate the product. After the decontamination prescribed above has been carried out, submit a Product Return Request Sheet or the Detoxification/Decontamination Certificate to SMC and await SMC's approval and further instructions before attempting to return the item. Please refer to the International Chemical Safety Cards (ICSC) for a list of harmful substances. If you have any further questions, please don't hesitate to contact your SMC sales representative.

JSXD and JSXZ Precautions

Warning

- 1. For pilot operated 2-port solenoid valves, when the valve is closed, sudden pressure resulting from the startup of the fluid supply source (pump, compressor, etc.) may cause the valve to open momentarily and leakage to occur, so please exercise caution.
- 2. If the product is used in the conditions in which rapid decrease in the inlet pressure of the valve and rapid increase in the outlet pressure of the valve are repeated, excessive stress will be applied to the diaphragm, which causes the diaphragm to be damaged and dropped, leading to the operation failure of the valve. Check the operating conditions before use.
- 3. Min. operating pressure differential (JSXD) Be aware that even if the pressure difference is above the min. operating pressure differential when the valve is closed, the pressure difference may fall below the min. operating pressure differential when the valve opens, depending on the capacity of the supply source (pumps, compressors, etc..) or the type of pipe restrictions (the piping is bent continuously due to elbow or tee, or narrow tube nozzle is installed in the end). If the product is used below the min. operating pressure, the operation becomes unstable, which might cause valve opening or closing failure, or oscillation, leading to failure due to insufficient pressure differential. Select an appropriate valve size with reference to the flow rate characteristics and flow rate characteristics table on pages 54 to 60.

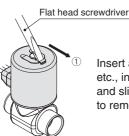

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For 2-port solenoid valve for fluid control precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Replacing the Solenoid Coils

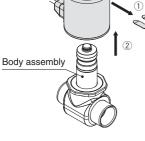

A Warning

- 1. When replacing the solenoid coil, turn off the power supply.
- 2. Be careful for possible high-temperature of the solenoid coil due to the fluid temperature and operating conditions.

Insert a flat head screwdriver, etc., into the groove in the clip and slide it in the direction of **1** to remove it.

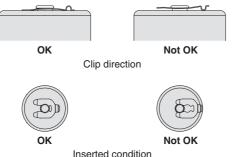

Once the clip has been removed, the coil can be removed from above (in the direction of **2**). Insert the replacement coil into

the body assembly, and then insert the clip by aligning it with the groove in the top of the body assembly.

Groove

SMC

Be sure to confirm the clip direction (back and front) as well as the insertion state.

* When inserting the coil, be sure to push it in until the groove in the body assembly is visible.

▲ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) ¹, and other safety regulations.

| ▲ Caution: | Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury. |
|------------|---|
| ▲ Warning: | Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury. |
| ▲ Danger: | Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury. |

▲ Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications. Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.

- 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
- 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
- 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

- 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
- 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalogue.
- An application which could have negative effects on people, property, or animals requiring special safety analysis.
- 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

▲ Caution

 The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

1) ISO 4414: Pneumatic fluid power – General rules relating to systems. ISO 4413: Hydraulic fluid power – General rules relating to systems.

IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)

ISO 10218-1: Manipulating industrial robots - Safety. etc.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".Read and accept them before using the product.

Limited warranty and Disclaimer

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first. ²⁾ Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

▲ Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country.

Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

Revision History

| | - | |
|-----------|---|----|
| Edition B | The JSXD and JSXM have been added. Brass and aluminum body materials have been added. An M12 connector electrical entry option has been added. The number of pages has been increased from 24 to 56. | ZV |
| Edition C | JSX□□U and JSXZ types have been added. The number of pages has been increased from 56 to 72. | AX |
