

RSPRO-SL7R - Charging

Charging the RSPRO-SL7R is a simple procedure. Supplied with the site light is a Micro-USB charging cable and UK mains plug with a USB port on the top of it.

1.If you reverse the unit you will see a plastic transparent cover. Lift this cover and fully reveal the two ports.

2.To charge the unit, simply slot in the included Micro-USB charging cable. This can then be connected to the included UK Mains plug, into the USB port.

Alternatively, the cable can be placed into an existing USB port. Typical locations of these include: smartphone chargers, PCs, or mains USB ports.

You can charge the unit via a car USB adapter. This will take longer than the mains powered option and you must disconnect the unit from the charge source when you are not using the car

3. The RSPRO-SL7R also has an additional USB port which is underneath the Micro-USB port (2). This can be used to provide power and to charge other small devices such as mobile phones.
